Enter and Exit of Scissor Lift to Access Top of Cool Room | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Enter and Exit of Scissor Lift to Access Top of Cool Room

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person:	Phone:	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, assess risk to communicate those hazards and then to further take steps to either eliminate or control each hazard.	
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.	
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.	
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters	☐ is carried out on or near pressurised gas mains or piping
☐ is carried out on a telecommunication tower	☐ is carried out on or near chemical, fuel or refrigerant lines
☐ involves demolition of an element of a structure that is load-bearing	☐ is carried out on or near energised electrical installations or services
☐ involves demolition of an element related to the physical integrity of structures	☐ is carried out in an area that may have a contaminated or flammable atmosphere
☐ involves, or is likely to involve, disturbing asbestos	☐ involves tilt-up or precast concrete
☐ involves structural alteration or repair that requires temporary support to prevent collapse	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
☐ is carried out in or near a confined space	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant
☐ is carried out in/near a shaft or trench deeper than 1.5 m or tunnel involving use of explosives	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

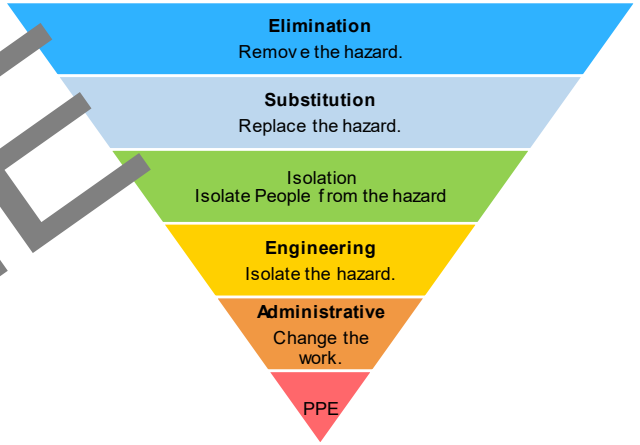
ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEE
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review befo work starts.
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	nitor and ke records

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferr en co lling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the most e tive, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Prote ve quipm) is the least effective method.

HEIRARCHY OF CONTROLS



PERS NAL P TECTIVE EQUIPMENT (PPE)

Select the appropriate PPE abo suitable for the equipment used or the job task being performed (if applicable).

Permit or Licenses Requirements	Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Inadequate training, poor lighting	3H	- Ensure all operators have current, valid high risk work licences and relevant training in operating scissor lifts. - Conduct a thorough site-specific induction for workers, highlighting potential hazards and safety procedures related to scissor lift operation. - Implement a buddy system for inexperienced workers under supervision of trained personnel until they are confident and competent. - Provide adequate task lighting to ensure visibility during work operations, especially in dimly lit areas. - Use portable lighting where fixed lighting is not sufficient, ensuring it does not cause glare or shadows that could impede vision. - Conduct pre-start meetings to discuss tasks, address concerns, and reinforce safe work practice requirements. - Clearly mark entry and exit points with reflective tape or signage to enhance visibility. - Maintain a clutter-free area around the scissor lift to minimise trip hazards during access and egress. - Verify that safety equipment such as helmets and harnesses are correctly fitted and used. - Designate exclusion zones with barriers or cones to prevent unauthorised personnel from accessing the work area. - Regularly inspect the condition of the scissor lift, including emergency descent features and handrails. - Provide a briefing on emergency procedures, including the location of first aid kits and how to summon medical assistance if needed. - Establish clear communication systems, such as two-way radios or mobile phones, to report any issues immediately. - Implement a system for regular safety audits and reviews to continuously identify and rectify potential hazards.	2M
2. Pre-Operational Inspection	Equipment malfunction, missing safety features	3H	- Conduct a thorough visual inspection of the scissor lift for any signs of damage or wear. - Verify that all controls and safety mechanisms, including emergency stop buttons, are functioning correctly. - Ensure that the operator is trained and competent to conduct the pre-operational inspection of the scissor lift. - Check that the scissor lift is equipped with fully functional guard rails and toe boards to prevent falls. - Confirm that the manufacturer's manual and safety procedures are readily available on-site. - Inspect tyres for appropriate pressure and tread wear to ensure stability during operation. - Validate that all warning labels and operational decals are present and legible.	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Test alarm systems and horn functions to ensure they are working as intended. - Ensure battery or power source levels are adequate for the duration of the task without risk of sudden shut-off. - Assess ground conditions where the scisso[illegible]t will be used to confirm stability and load capacity. - Review maintenance records to confirm t[illegible]t regular [illegible]vicing and inspections have been carried out. - Use a checklist to document the pre-operati[illegible]t inspection results, ensuring any defects are reported and repaired before use.	
3. Site Safety Assessment	Unstable ground, obstructions	[illegible]A	- Conduct a prelimina[illegible]ite insp[illegible]ion to identify and [illegible]ssess unstable ground conditions before scissor lift use. - Use groun[illegible]ates or ma[illegible]to stabi[illegible]th[illegible]ase of the scissor lift on soft or uneven surfaces. - Ens[illegible]that a[illegible]perat[illegible]s are trained and familiar with the specific scissor lift model being used. - Esta[illegible]s a clea[illegible]vel pathway free from obstructions for the scissor lift's movement route. - Imple[illegible]ent traffic [illegible]nagement plan to control vehicle and pedestrian movements around the work area. - [illegible]k a[illegible] clear[illegible]sign any overhead hazards or obstructions within the work zone. - Utilise [illegible]tters or ground personnel to assist in identifying and guiding around potential hazards. - [illegible]uip operators with adequate communication devices to maintain contact with ground personnel. - Regularly inspect and maintain the scissor lift to ensure operational integrity and safety. - Verify that the scissor lift is equipped with functional tilt and overload warning systems. - Confirm that all personal protective equipment (PPE) required for the task is available and worn by workers, including helmets and high-visibility clothing. - Restrict unauthorised personnel from entering the work zone while the scissor lift is in operation. - Designate and demarcate exclusion zones around areas where the scissor lift may have limited stability. - Review weather conditions prior to operation to avoid using the lift in high winds or adverse weather that could affect stability.	3H
4. PPE Check	Incorrect PPE, damaged PPE	3H	[redacted]	2M

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	☒	
All relevant personnel consulted during the development of the SWMS.	☒	
Name, signature, position and date signed of the person approving the SWMS.	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☒	
Provides a step-by-step process of tasks required to carry out the activity or task.	☒	
Adequate risk assessment of any identified hazards has been completed.	☒	
Foreseeable hazards are identified and documented for each step.	☒	
Any hazards listed in any site risk assessments have been added to the SWMS.	☒	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	☒	
Check control measures added to the SWMS are the most effective solutions.	☒	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	☒	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	☒	
SWMS identifies plant and equipment to be used	☒	
Details of inspection checks required for any equipment listed are noted on the SWMS.	☒	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	☒	
Applicable personal protective equipment is selected on the SWMS.	☒	
Reflects and documents any legislative references and/or Australian Standards.	☒	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☒
