Excavation Work Under 1.5   SAFE WORK METHOD STATEMENT (SWMS)								
TASK	OR ACTIVITY: Excavation Work U	Inder 1.5						
Business Name: [Company Name]		ABN: [ABN]	SWMS#					
Business Address: [Company Address]								
Contact Person:	Phone: [Phone]	E, pil:						
THIS SAFE WORK METHOD	STATEMENT IS APPROVED BY	THE PL OF THE PROJECT						
Under the Work Health and Safety Regulation (WHS Regulation), a person conductive proposed work starts.	icting a business or undertaking (k 3U) is	required to thurs at a safe work method s	statement (SWMS) is prepared before					
Full Name:								
Signature:		Title:	Date:					
Details of the person(s) responsible for ensuring implementation, monitoring	compliance of the SWMS well as review	vs and modifications of the SWMS.						
Full Name:		Title:	Phone:					
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS WMS. ST HAVE THE FOLLOWING COMMUNICATED	N TE AND DATED SIGNATURE OF A CO. MUNICATED TO IN THE DEVELO	ALL RELEVANT PERSONNEL WHO HAVE B OPMENT AND APPROVAL OF THIS SWMS	EEN CONSULTED AND					
Safety meetings or toolbox talks will be sched ed in accordance with regislative requirements to first identify any site hazards, conditioned unical those hazards and then to further take steps to either conducted or control eact hazard.	NAME	SIGNATURE	DATE					
If an incident or a near miss occurs, all work must study unately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.								
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.								
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip hazards, Inadequate PPE	2М	<ul> <li>Conduct a thorough site inspection prior to commencing work, identifying any potential trip hazards such as uneven ground or loos materials, and mark them to alert workers to these hazards.</li> <li>Ensure that all workers have the approprior Personal Protective Equipment (PPE) required for this job, including hard hats, high tisibility to the study footwear with reinforced toe caps, and appropriate gloves.</li> <li>Assign a team leader or supervisor responsible the ensuring the PPE is worn correctly, and ensure that ongoing assessments an earried or throughout the project to ensure compliance.</li> <li>Implement regression of the study of the workspace in order to maintain a clear and organise actices within the workspace in order to maintain a clear and organise active swithin the workspace in order to maintain a clear and organise actives within the excavation area, implementing temporing and arrivers becausary, thus separating work areas from pedestrian zones, miniming on pring to the second directly involved with the excavation.</li> <li>Conduct too as talks uppre-shift meetings focusing on hazard identification and the mitig tion is stegies, encouraging workers to prioritise safety and be aware of the other at lawareness, and using caution when working near edges.</li> <li>Install adequate lighting around the work area to increase visibility, particularly for night shifts, to minimise the potential for trip hazards going undetected.</li> <li>Regularly inspect the condition of the PPE and replace any damaged or worn-out equipment promptly, ensuring that all workers continue to have the necessary protection while performing their tasks.</li> <li>Foster a culture of open communication among team members, allowing them to voice their concerns about potential hazards in the workplace, and collaboratively work towards finding effective solutions to enhance overall safety.</li> </ul>	1L	
2. Excavation Marking	Inaccurate measurements, Slips and falls	2M	<ul> <li>Proper training: Ensure that all workers involved in the excavation process are well-trained and familiar with the equipment they will be using to avoid inaccuracies and potential slips or falls.</li> <li>Double-check measurements: Before commencing work, double-check all measurements related to the excavation area to ensure their accuracy and minimise the risk of errors during the excavation process.</li> <li>Clear site marking: Use clear, bright markings (such as flags or spray paint) to clearly delineate the boundaries of the excavation area, reducing the likelihood of miscommunication among workers.</li> </ul>	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
		RISK	<ul> <li>Adequate lighting: Make sure the excavation site has sufficient lighting, especially when working in low-light conditions or at night, to reduce the risk of accidents due to poor visibility.</li> <li>Proper footwear: Require all workers to wear therefore the risk of all accidents due to falls.</li> <li>Barricades and signage: Install barricades are the opriate warning signs around the excavation site to alert workers and other into cluals onsite the potential hazards associated with the aca.</li> <li>Regular inspections of duct hey lar inspections on the areas throughout the excavation process of any evoloping hazards (such as loosened soil) and take corrective action imme ately.</li> <li>Safe access what: Estensish safe accurates for workers and equipment enterior duals on site to slips, trips, and falls.</li> <li>Proper hey dling of any ipment: Train workers on the correct usage of measurement tools at the extravition share appropriate fall protection measures, such as guardrails or provent oest, the systems, where there is a risk of falls from elevated surfaces r into the accavation process to minimise members involved in the excavation process to minimise members and adjust work schedules accordingly, especially during wet or excessively windy conditions, which might increase the risk of slips and falls around the excavation site.</li> <li>Cleanliness and organisation: Maintain a clean and organised work area throughout the excavation process, process, prompty addressing any spills or clutter to reduce the likelihood of slips, trips, and falls.</li> </ul>	KISK	
3. Utility Location	Striking utilities, Electrocution	ЗH	<ul> <li>Obtain the necessary permits and consult utility service providers prior to any excavation work, ensuring that all utilities in the area are accurately identified and marked.</li> <li>Engage a licensed utilities locator for a comprehensive investigation of the area using instruments like ground penetrating radar or cable and pipe locators to identify underground utilities.</li> <li>Maintain up-to-date utility plans and keep on-site as a reference material for all workers involved in the excavation process.</li> <li>Clearly mark and delineate the boundaries of underground utilities in the excavation zone with brightly colored flags, spray paint or stakes to avoid accidental contact.</li> </ul>	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	<ul> <li>SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS</li> <li>Conduct a thorough risk assessment prior to commencing work and communicate the findings to all workers, highlighting the possible hazards and control measures associated with striking utilities or electrocution.</li> <li>Equip workers with proper personal protective equipment (PPE) such as insulated gloves, boots, and eyewear where necessary to reduce the risk of incidents relating to utilities.</li> </ul>	RESIDUAL RISK	NAME OF PERSON
			<ul> <li>Utilise non-conductive tools and equipment, promoted when working near power lines or other electrical infrastructure, to minimist the potential incidents.</li> <li>Train employees or an excalence practices, emergency response procedures, first aid, and CPP or ensure they a twell-equippent to handle any unforeseen accidents related to utility sites.</li> <li>Implement are go zone round ident and tility lines and establish a minimum clear and distance to event accidentar contact during excavation activities.</li> </ul>		
			<ul> <li>Regultion spectral work site for any changes in conditions or potential new risks related of unless, up using the SWMS as needed to address any new hazards.</li> <li>Employ a destinated spotter to observe and monitor excavation work near utilities, so wring bommulation between the excavator and support personnel is main line.</li> <li>Ensure overgency response equipment, such as fire extinguishers and first aid kinais readily accessible on site and regularly refilled and inspected for functionality.</li> <li>Maintain clear lines of communication with utility companies throughout excavation work to report any damage or emergencies, as well as exchanging necessary information about potential hazards.</li> </ul>		
	S		By implementing these control measures for utility location during excavation work, the likelihood of striking utilities and associated accidents such as electrocution can be considerably reduced. This ensures a safer work environment for workers and helps to prevent costly disruptions to utility services.		
4. Pedestrian Management	Pedestrian injury, Traffic accidents	2M		1L

#### **EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES**

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

#### SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

#### SAF WC A STHUD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to revised if necessary) if relevant control measure are subcontract of the SWMS and their health and safety representatives who reworkplace.

ke sure it remains effective and must be reviewed (and acception of the process should be carried out in s any subcontract s) who may be affected by the operation esentatives who recented that work group at the

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- 1. Spot Checks.
- 2. Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

#### SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.			
Names and signatures of all relevant personnel consulted during the development of the SWMS.		P	
Name, signature, position and date signed of the person approving the SWMS.			
Specific personnel and qualifications, experience is noted in the SWMS.			
Provides a step-by-step process of tasks required to carry out the activity or task.			
Adequate risk assessment of any identified hazards has been completed.			
Foreseeable hazards are identified and documented for each step.			
Any hazards listed in any site risk assessments have been added to the SWh			
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.			
Check control measures added to the SWMS are the most effectine sections.			
Responsible person is assigned and listed on the SWMS for the impement of continue measures.			
Permit requirements specified, such as Hot Work, Electrical Work, Vortat Heights etc.			
SWMS identifies plant and equipment to be up t.			
Details of inspection checks required for any equipment listed at noted on the SWMS.			
Describes any mandatory qualifications, experience raining skills required to perform the work.			
Applicable personal protective equipment is selected on the SWMS.			
Lists any required permits or licenses.			
Reflects and documents any legislative references and/or Australian Standards.			
Identifies any hazardous substances used with specific control measures in line with any SDS.
