Fertilisers | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Fertilisers

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

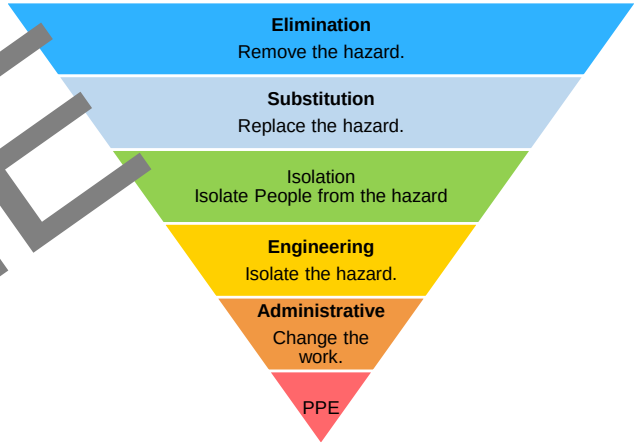
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips and falls, Chemical exposure	2M	- Training and induction: Ensure that all workers involved in handling fertilisers are provided with adequate training and induction about the potential hazards and safe work procedures. - Personal Protective Equipment (PPE): Provide appropriate PPE, such as gloves, safety goggles, and chemical-resistant clothing for workers handling fertilisers to minimise chemical exposure. - Non-slip footwear: Require workers to wear sturdy, non-slip footwear to reduce the risk of slips and falls around fertiliser storage and handling areas. - Proper Storage: Store fertilisers in a designated area away from walkways or high-traffic zones to prevent accidents and spills. - Spill control procedures: Establish clear spill containment and clean-up procedures, including ensuring that spills are cleaned up promptly and safely to prevent slips and falls and to minimise chemical exposure. - Clear signage: Place visible warning signs and hazard symbols in areas where fertilisers are stored or used to alert workers to potential risks and hazards. - Good housekeeping: Maintain a clean and clutter-free work environment by regularly sweeping and cleaning floors, removing trip hazards, and organising tools and equipment properly. - Regular inspections of the work area: Conduct routine inspections of the workspace to ensure good housekeeping practices are being maintained and to identify and address any potential hazards. - Safe handling guidelines: Develop and communicate guidelines outlining the correct use, handling, and disposal of fertilisers to all workers at the job site. - Ventilation: Ensure proper ventilation, such as open windows or mechanical ventilation systems, to help disperse any hazardous fumes from the fertiliser. - Emergency response plan: Establish a comprehensive emergency response plan that outlines steps to be taken in case of an accident, including who to contact, evacuation procedures, and first aid provisions.	1L	
2. Storage	Fire hazard, Incompatible chemical reactions	3H	- Proper storage facilities: Ensure that fertilizers are stored in a well-ventilated, cool, and dry area, away from direct sunlight, heat sources, or potential ignition points. - Chemical compatibility: Segregate incompatible chemicals or fertilizers to prevent accidental mixing or contact, which may cause hazardous chemical reactions. Consult Material Safety Data Sheets (MSDS) for information on compatibility. - Clear labeling: Clearly label all containers with the specific type of fertilizer and include appropriate hazard symbols, warnings, and handling instructions as per manufacturer guidelines.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Fire prevention: Install fire alarms, smoke detectors, and appropriate fire extinguishers near the storage area. Conduct regular equipment checks and ensure staff are trained in their use. - Spill containment: Establish spill containment measures to confine any potential leakage or spills within the storage area, such as installing bunds or secondary containment systems. - Storage capacity limits: Avoid overstocking and storing excessive amounts of fertilizers to minimise risk. Adhere to local regulations regarding storage capacity limits. - Emergency response plan: Develop and implement an emergency response plan, including immediate actions to be taken in case of fire or chemical accidents. Regularly review and update the plan as necessary. - Staff training: Ensure that all personnel handling or working around fertilizers are trained on proper handling, storage techniques, and the potential risks associated with fertilizers. - Inspection and maintenance: Conduct regular inspections of the storage area for signs of damage, leaks, or spills. Perform routine maintenance on storage containers, shelves, and equipment used for handling fertilizers. - Restricted access: Limit access to authorised personnel only and implement a system to keep track of who enters and exits the storage area. - Personal protective equipment (PPE): Provide employees handling fertilizers with appropriate PPE, such as gloves, safety goggles, and respirators (if required), to minimise exposure and protect their health. Ensure employees are trained in the correct use and maintenance of PPE.		
3. Handling	Back injuries, Puncture wounds	2M	- Provide proper training: Ensure all team members involved in handling fertilizers are adequately trained on safe lifting techniques and appropriate handling methods to reduce the risk of back injuries and puncture wounds. - Use appropriate Personal Protective Equipment (PPE): Equip workers with necessary PPE such as gloves, safety boots, long sleeve shirts, and pants to protect against puncture wounds and skin irritation from fertilizer contact. - Implement mechanical aids: Utilise equipment like pallet jacks, trolleys, or forklifts for moving heavy loads of fertilizers to minimise manual handling and reduce the risk of back injuries. - Correct lifting posture: Encourage workers to always bend their knees while lifting and maintain a straight back to minimise strain on the spine during manual handling tasks. - Practice good housekeeping: Regularly remove clutter and obstacles from the working area, ensuring clear pathways and reducing the chance of tripping or stumbling while handling fertilizers.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Store materials properly: Securely store fertilizers in designated areas, using sturdy shelving or pallet systems to prevent containers from falling and causing puncture wounds or back injuries. - Rotate duties: Schedule regular breaks and rotate workers between different tasks to avoid prolonged strain on muscles and joints, which can lead to potential back injuries. - Utilise teamwork: Encourage workers to work together, using a "buddy system" when lifting heavy loads or moving large quantities of fertilizer, to minimise individual risks of injury. - Properly label containers: Clearly label all fertilizer containers, detailing the contents and any relevant hazard information, so workers are aware of potential risks before handling. - Monitor and review work procedures: Continuously evaluate the effectiveness of implemented control measures and seek feedback from workers on ways to further minimise risks during the handling of fertilizers. - Establish emergency procedures: Develop and communicate a plan for responding to accidents or incidents related to handling fertilizers, such as puncture wounds or back injuries, ensuring workers are aware of steps to take in case of an emergency.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
