Fire Extinguisher Inspection And Servicing | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Fire Extinguisher Inspection And Servicing

Business Name:		ABN:	SWMS#
Business Address:			
Contact Person:	Phone:	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, assess risk to communicate those hazards and then to further take steps to either eliminate or control each hazard.	
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.	
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.	
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	
Project Address:	
Project Manager:	
Contact Phone:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters	☐ is carried out on or near pressurised gas mains or piping
☐ is carried out on a telecommunication tower	☐ is carried out on or near chemical, fuel or refrigerant lines
☐ involves demolition of an element of a structure that is load-bearing	☐ is carried out on or near energised electrical installations or services
☐ involves demolition of an element related to the physical integrity of structures	☐ is carried out in an area that may have a contaminated or flammable atmosphere
☐ involves, or is likely to involve, disturbing asbestos	☐ involves tilt-up or precast concrete
☐ involves structural alteration or repair that requires temporary support to prevent collapse	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
☐ is carried out in or near a confined space	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant
☐ is carried out in/near a shaft or trench deeper than 1.5 m or tunnel involving use of explosives	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEE
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review befo work starts.
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	nitor and ke records

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferr en co lling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the most e tive, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Prote ve quipm) is the least effective method.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Slip hazards, lifting heavy objects	3H	- Conduct a site-specific risk assessment to identify any potential slip hazards before beginning the task. - Ensure all personnel involved are wearing appropriate slip-resistant footwear to minimise the risk of slips. - Clear the work area of any unnecessary obstacles, debris, or wet surfaces to prevent trip and slip hazards. - Use signage to mark any known slip hazards within the work area for increased awareness among workers. - Implement manual handling training sessions for staff to ensure safe lifting techniques are used when moving heavy objects. - Provide mechanical aids such as trolleys, dollies, or forklifts to move fire extinguishers where feasible. - If manual lifting is necessary, use a team lift approach to distribute weight evenly among multiple workers. - Limit the weight of objects to be lifted by one person according to Safe Work Australia guidelines to reduce injury risk. - Clearly label fire extinguisher locations and access requirements to minimise unnecessary movement. - Establish a clear communication plan, including the use of radios or mobile devices, to ensure assistance is readily available in case of an emergency or if additional help is needed. - Schedule regular breaks to prevent fatigue-induced errors, ensuring that employees remain attentive to their surroundings.	2M
2. Locate Fire Extinguisher	Tripping over obstacles, poor lighting	3H	- Conduct a site walk-through before commencing work to identify potential obstacles and ensure clear pathways. - Use appropriate lighting equipment, such as torches or portable lights, to improve visibility in poorly lit areas. - Mark or tape off any uneven flooring or unexpected steps in the area to prevent tripping. - Ensure cables and cords are neatly organised and secured along the edges of walkways. - Remove unnecessary equipment or debris from the area to maintain a tidy work environment. - Wear appropriate footwear with good grip and support to reduce the risk of slipping or tripping. - Inform coworkers or facility staff about work activities to avoid unexpected interruptions or movement through the work area. - Place warning signs near areas that remain temporarily hazardous due to reduced lighting or other factors. - Ensure fire extinguishers are not blocked by furniture, stock, or other obstructions.	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Where possible, schedule inspection during times when foot traffic is minimal to reduce collision risks. - Use high-vis clothing to increase visibility to others working in the area. - Familiarise yourself with the layout of the area beforehand to anticipate known obstacles. - Ensure all staff involved in the inspection have access to updated site maps outlining fire extinguisher locations. - Implement a buddy system where two individuals check each other's movements in the area for safety.	
3. Visual Inspection	Sharp edges, faulty extinguisher hooks	M	- Conduct a pre-inspection risk assessment to identify any sharp edges or faulty hooks. - Wear appropriate personal protective equipment including gloves to protect against cuts and abrasions. - Ensure all staff are trained in proper manual handling techniques to reduce the risk of injury from sharp or heavy objects. - Keep the work area well-lit to help identify any hazards on or around fire extinguishers. - Use tools with insulated handles to minimise the risk of injury from sharp components or contact with metal surfaces. - Inspect mounting brackets for wear or damage and replace them as required to prevent extinquisher detachment. - Use caution and avoid placing fingers near potential pinch points when removing or reinstalling fire extinguishers. - Implement a periodic inspection checklist to systematically check each component, reducing oversight. - Securely position ladders or stools if needed to reach elevated extinguishers, avoiding overreaching. - Maintain clear communication between team members during the inspection process to coordinate actions safely. - Clearly tag and remove from service any extinguisher found with significant defects until repairs can be made. - Arrange for professional repair services for any critical issues identified, such as corroded parts or damaged connections. - Regularly update training on identifying and addressing equipment faults to keep skills current and improve safety practices.	3H
4. Check Pressure Gauge	High pressure release, gauge failure	3H	[redacted]	2M

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAMPLE

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	☒	
All relevant personnel consulted during the development of the SWMS.	☒	
Name, signature, position and date signed of the person approving the SWMS.	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☒	
Provides a step-by-step process of tasks required to carry out the activity or task.	☒	
Adequate risk assessment of any identified hazards has been completed.	☒	
Foreseeable hazards are identified and documented for each step.	☒	
Any hazards listed in any site risk assessments have been added to the SWMS.	☒	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	☒	
Check control measures added to the SWMS are the most effective solutions.	☒	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	☒	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	☒	
SWMS identifies plant and equipment to be used	☒	
Details of inspection checks required for any equipment listed are noted on the SWMS.	☒	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	☒	
Applicable personal protective equipment is selected on the SWMS.	☒	
Reflects and documents any legislative references and/or Australian Standards.	☒	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☒
