Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work.
Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.								PPE

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Permit or Licenses Requirements

Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Site Preparation	Loose debris, Uneven ground	2M	<ul style="list-style-type: none"> - Conduct a thorough inspection of the site to identify and remove any loose debris before beginning work. - Use barriers or signage to isolate areas with uneven ground to prevent access by workers carrying out framing and truss activities. - Implement regular site cleaning protocols to maintain a clear working area free from construction debris. - Employ a professional surveyor to assess the site and identify any potential hazards related to the terrain or existing structures. - Provide comprehensive safety instructions for all workers, focusing on the importance of maintaining clean and level working environments. - Equip workers with appropriate personal protective equipment (PPE), such as sturdy boots with slip-resistant soles to navigate uneven surfaces safely. - Use compacting tools or machinery to level out uneven areas where essential framing and truss activities will occur. - Install temporary walkways or platforms over areas with significant unevenness to ensure stable footing for workers. - Schedule regular monitoring and re-assessment of the site conditions by qualified safety personnel throughout the project to address any new risks that arise. - Develop and implement an emergency response plan specifically tailored to potential incidents involving loose debris and uneven ground, including quick-access medical kits and trained first aid personnel on-site. - Clearly mark all work zones with flags or cones to provide visual guidance around hazardous areas until they are permanently rectified. - Train workers on the proper techniques for navigating and working safely in environments with potential ground-level hazards. - Provide weather-specific guidance, considering changes in site conditions due to wet or windy weather, which can exacerbate issues with loose debris and uneven ground. - Ensure adequate lighting around the site to enhance visibility, especially around areas where ground conditions may pose additional risks during early morning or late evening hours. 	1L
2. Material Handling	Manual handling injuries, Struck by materials	3H	<ul style="list-style-type: none"> - Use mechanical lifting aids such as forklifts or cranes to handle heavy trusses and frames. - Provide training for workers on proper manual handling techniques including lifting, carrying, and setting down loads. - Implement a buddy system for lifting heavier or awkward items to distribute the weight more evenly. - Utilise trolleys, hoists, and other materials handling equipment to minimise direct handling. 	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			<ul style="list-style-type: none"> - Conduct pre-start safety briefings each day to reinforce safe handling practices and discuss any specific risks with current materials. - Ensure all walkways and working surfaces are clear of debris and obstructions to facilitate safe material movement. - Require workers to wear appropriate personal protective equipment (PPE) such as steel-capped boots, gloves, and helmets. - Regularly inspect all equipment used for transporting materials to ensure they are in good working condition. - Establish designated drop zones for materials that are clearly marked to avoid areas where materials might fall on someone. - Rotate tasks among team members to prevent repetitive strain injuries and overexertion. - Provide adequate supervision and monitoring to ensure that safe material handling procedures are followed consistently. 	
3. Machinery Operation	Noise, Entanglement risk	3H	<ul style="list-style-type: none"> - Provide all workers with appropriate personal protective equipment (PPE) such as earplugs or earmuffs to protect from high noise levels. - Regular maintenance and service machinery to ensure smooth operation and minimise noise production. - Conduct regular training sessions for operators on safe machine operation and emergency stop procedures. - Install physical guards around moving parts of machinery to prevent entanglement. - Ensure that all machinery is equipped with easily accessible emergency stop buttons. - Implement a lockout/tagout system to ensure machines are safely shut down during maintenance or when not in use. - Keep the workspace well-organised and free of unnecessary materials to reduce tripping hazards. - Display clear, visible signs warning of potential hazards like high noise levels and moving machinery. - Carry out regular risk assessments to identify any new risks and to review the effectiveness of existing control measures. - Enforce strict adherence to a no loose clothing or jewellery policy to minimise entanglement risks. - Establish designated walking paths that are safely distanced from machinery to protect pedestrians. - Limit the amount of time workers are exposed to high noise levels through job rotation. - Provide training on proper manual handling techniques to avoid ergonomic injuries when interacting with machinery. - Conduct regular health surveillance to monitor for signs of hearing loss or other health impacts due to prolonged exposure to noise. 	1L
4. Measuring and Marking	Sharp tools, Eye strain	2M		1L

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review must be carried out in consultation with workers (including contractors and sub-contractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	<input checked="" type="checkbox"/>	
All relevant personnel consulted during the development of the SWMS.	<input checked="" type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input checked="" type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input checked="" type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input checked="" type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input checked="" type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input checked="" type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	<input checked="" type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input checked="" type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input checked="" type="checkbox"/>	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input checked="" type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input checked="" type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input checked="" type="checkbox"/>	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	<input checked="" type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input checked="" type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input checked="" type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input checked="" type="checkbox"/>
