Glass Drill SAFE WORK METHOD STATEMENT (SWMS)										
	TASK OR ACTIVITY: Glass Drill									
Business Name: [Company Name]		ABN: [ABN]	SWMS#							
Business Address: [Company Address]										
Contact Person:	Phone: [Phone]	E pil:								
THIS SAFE WORK METHOD	THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PL - OF THE PROJECT									
Under the Work Health and Safety Regulation (WHS Regulation), a person conductive proposed work starts.	Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (N 3U) is required to source at a safe work method statement (SWMS) is prepared before the proposed work starts.									
Full Name:										
Signature:		Title:	Date:							
Details of the person(s) responsible for ensuring implementation, monitoring	compliance of the SWMS well as review	vs and modifications of the SWMS.								
Full Name:		Title:	Phone:							
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS WMS. ST HAVE THE FOLLOWING COMMUNICATED	N. TE AND DATED SIGNATURE OF A CO. MUNICATED TO IN THE DEVELO	LL RELEVANT PERSONNEL WHO HAVE B OPMENT AND APPROVAL OF THIS SWMS	EEN CONSULTED AND							
Safety meetings or toolbox talks will be sched ed in accordance with egislative requirements to first identify any site hazards, conduction inical those hazards and then to further take steps to either the sched or conduction and the schedard.	NAME	SIGNATURE	DATE							
If an incident or a near miss occurs, all work must study underly. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.										
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.										
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Manual handling injuries, Exposure to silica dust	2M	 Conduct a risk assessment before beginning work to identify potential hazards and necessary control measures. Provide appropriate manual handling training that workers involved in the preparation process. Use mechanical lifting aids such as trolleys and hole ownere possible, to minimise manual handling of heavy materials. Implement proper material barage procedures to educe close and ensure easy access to necessary equipment. Utilise adequate to use a systems, including extraoron fans and dust suppression more anisms, the educe typosure to the dust. Make use obsersional protective equipment (PPE), such as gloves, safety shoes, and ensumasks or address to proceed to a gunst hazards. Ensure source to address to proceed to a suppression protection and maintenance of tools, equipment, and machinery used in the reparate process to prevent potential accidents. Emplo good pusekturing practices to maintain a clear and safe workspace. toourne ewon us to take regular breaks and stretch to avoid strain-related injunt. Work environment can be promptly identified and addressed. Develop and implement an emergency action plan, detailing appropriate responses to various situations such as fire, injury, or chemical spills. Establish a system for regular monitoring of workplace conditions to ensure ongoing adherence to Workplace Health and Safety (WHS) guidelines. Update and review Safe Work Method Statements (SWMS) as needed, taking into account changes to equipment, procedures, or legislation. Foster a workplace culture that prioritises health and safety by involving workers in decision-making processes and facilitating ongoing WHS training and development opportunities. 	1L	
2. Machine Setup	Pinch and crush points, Electrical hazards	ЗH	 Ensure all workers involved have completed relevant training and are competent in machine setup and glass drilling tasks. Always disconnect the power source before conducting any maintenance or adjustments on the machine to mitigate electrical hazards. Inspect the workplace for any potential hazards prior to starting work, such as wet or slippery surfaces, which could contribute to electrical hazards or loss of grip during operation. Utilise personal protective equipment (PPE), including safety glasses, gloves and closed-toe footwear to protect workers from pinch and crush injuries. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			 Verify that the glass drilling machine is in good working condition and has been inspected and maintained according to the manufacturer's guidelines. 		
			- Position the machine on a stable, level surface within a designated work area that has appropriate signage and barriers to preven mauthorised access.		
			- Perform routine checks for damaged cord and ensure actrical devices, such as extension leads, are properly grounded with visible ayed wires.		
			 Examine the machine for any loose parts or fit as that need tichtening to reduce the risk of pinch and crush in thes. Use clamps or other secure farming methods to have glass securely in place 		
			and minimise movements ring to strilling process. - Set up guare and shields round a drilling out to protect workers from flying debris or accurated contact with the output		
			- Ensuring work of the nas adequate lighting and ventilation to support clear visibilities comficient during machine use.		
			- Implement, buddy oftem, so that one worker is focused on operating the machine while mother atches for potential risks and advises on the procedure.		
			- away of post tial trip hazards, such as cables or tools on the ground, and main, the orderly workspace to reduce the chance of falls or slips.		
			It the completion of each work shift, review the machine setup and make any newsary adjustments for optimal safety and performance during the next period of operation.		
			 Ensure adequate ventilation by installing and maintaining proper exhaust systems in the working area to minimise the concentration of toxic fumes. 		
			- Schedule regular breaks for workers exposed to hazardous fumes, allowing them time away from the worksite to breathe fresh air.		
			- Implement a system of monitoring the levels of toxic fumes within the workspace to ensure they remain within safe limits according to Australian standards (e.g., Safe Work Australia exposure limits).		
3. Proper Ventilation	Inhalation of toxic fumes, Insufficient oxygen	ЗH	- Educate workers on the potential hazards associated with working with glass drilling and establish standard operating procedures (SOPs) for minimising risks.	2M	
			 Provide personal protective equipment (PPE) such as respiratory masks specifically designed for protection against hazardous fumes, and ensure staff training on proper usage and maintenance. 		
			- Conduct thorough risk assessments before commencing any glass drilling work to identify potential hazards and implement necessary control measures accordingly.		
			- Post signage detailing potential hazards and safety procedures adjacent to work areas where toxic fumes may be present.		

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Regularly inspect and maintain tools and equipment used for glass drilling to minimise the release of harmful fumes or particles.		
			- Promote communication among the workforce, encuraging employees to report any issues related to ventilation, toxicity, and in ancient oxygen levels promptly.		
			- Implement administrative controls, placing strictions or creas with potential hazards, limiting access only to properly train and coorised personnel.		
			- Use alternative methods, materials, or equipment that reduce the generation of toxic fumes during glass drille work if feasible.		
			- Establish an emergency response plan for situation analying inadequate ventilation or oxygen bugst outlining employee responsibilities and procedures for addressing supervicidents.		
4. PPE Selection	Inadequate protective recorder fit	ΡM		1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAF WC A STHUD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to revised if necessary) if relevant control measure are subcontract of the SWMS and their health and safety representatives who reworkplace.

ke sure it remains effective and must be reviewed (and acception of the process should be carried out in s any subcontract s) who may be affected by the operation esentatives who recented that work group at the

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- 1. Spot Checks.
- 2. Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.			
Names and signatures of all relevant personnel consulted during the development of the SWMS.		P	
Name, signature, position and date signed of the person approving the SWMS.			
Specific personnel and qualifications, experience is noted in the SWMS.			
Provides a step-by-step process of tasks required to carry out the activity or task.			
Adequate risk assessment of any identified hazards has been completed.			
Foreseeable hazards are identified and documented for each step.			
Any hazards listed in any site risk assessments have been added to the SWh			
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.			
Check control measures added to the SWMS are the most effectine sections.			
Responsible person is assigned and listed on the SWMS for the immement of cont, measures.			
Permit requirements specified, such as Hot Work, Electrical Work, Vortat Heights etc.			
SWMS identifies plant and equipment to be up t.			
Details of inspection checks required for any equipment listed at noted on the SWMS.			
Describes any mandatory qualifications, experience values skills required to perform the work.			
Applicable personal protective equipment is selected on the SWMS.			
Lists any required permits or licenses.			
Reflects and documents any legislative references and/or Australian Standards.			
Identifies any hazardous substances used with specific control measures in line with any SDS.
