Greens Maintenance Equipment | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Greens Maintenance Equipment

Business Name: [Company Name]		ABN: [ABN]	SWMS#
Business Address: [Company Address]			
Contact Person:	Phone: [Phone]	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

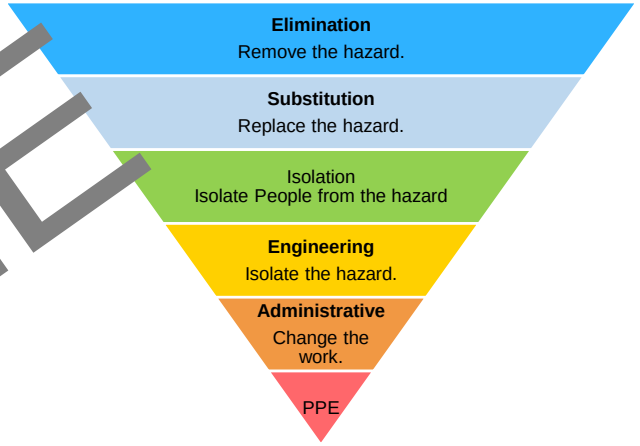
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Manual handling injuries, Slips and trips	2M	- Conduct manual handling training for workers, teaching proper lifting and carrying techniques to reduce the risk of strains or sprains from incorrect body movements. - Implement a buddy system for heavier loads that require assistance during lifting or moving. - Utilise appropriate mechanical aids such as pulleys, pallet jacks or forklifts when available, transferring heavier or bulk items in order to minimise the need for physical force during handling. - Regularly inspect and maintain maintenance equipment and tools, ensuring they are in optimal working condition and reducing the possibility of malfunction, breakage or falling during use. - Keep walkways, work areas and storage spaces clutter-free and clean, making sure any spills or tripping hazards are immediately addressed and removed. - Install adequate and easily accessible signage marking potential hazards and indicating correct working paths and off-limit areas in order to guide worker's safe movement around the site. - Implement regular housekeeping checks, checking that all cables, hoses and power leads are appropriately stored away preventing them from becoming trip hazards and maintaining clear and hazard-free access routes. - Ensure appropriate footwear with non-slip soles is worn by staff to prevent slip-related injuries on wet or slippery surfaces. - Communicate the importance of taking breaks and stretching regularly, advocating for self-care among workers during arduous tasks in order to prevent strain related injuries or overexertion. - Conduct periodic risk assessments to identify and address potential hazards, continuously updating safety procedures and controls based on any changes discovered during these assessments. - Encourage open communication channels where team members can report unsafe conditions, near misses, or any other concerns related to workplace safety, fostering a proactive safety culture focused on continuous improvement.	1L	
2. Equipment Inspection	Faulty equipment, Lack of training	3H	- Ensure all equipment is regularly inspected and serviced by a qualified technician, adhering to the manufacturer's guidelines and industry standards. - Develop and implement an equipment maintenance schedule that includes inspection checklists for routine assessments of each piece of equipment. - Allow only trained and certified personnel to inspect the equipment and perform preventative maintenance tasks. - Provide training sessions for workers on proper inspection techniques, recognizing potential hazards, and understanding equipment functionalities.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Equip maintenance staff with the necessary tools and personal protective equipment (PPE) to safely carry out their tasks. - Install and display clear warning signs around the working area, indicating potential hazards related to faulty equipment. - Incorporate pre-start checks for operators to assess the functionality of equipment before commencing work each day. - Implement a system for reporting faulty equipment, ensuring maintenance needs are promptly addressed and consistent communication is maintained among all staff members. - Store maintenance records and information in a centralized location, including manuals and guides, allowing easy access for staff. - Establish a response protocol for incidents involving faulty equipment, outlining appropriate actions and emergency procedures. - Conduct regular safety meetings and toolbox talks to discuss equipment-related hazards and reinforce the importance of proper maintenance and inspections. - Place easily accessible and visible labels on equipment that indicate the date of its last inspection and when the next inspection is due. - Ensure any equipment found to be faulty or non-compliant during an inspection is immediately tagged, quarantined, and reported according to the established response protocol. - Review and update control measures regularly to ensure continuous improvement and adaptability to changing technologies, standards, and equipment.		
3. Transport Equipment	Poor load security, Excessive load weight	3H	- Ensure all equipment is securely fastened and positioned appropriately before transportation to prevent any movement or shifting during transit. - Conduct a thorough inspection of the vehicle and loading equipment prior to use, ensuring all parts are in good working order and free from damage. - Utilise suitable load restraint systems, such as ropes, chains, or straps, to secure equipment during transit and minimise the risk of accidental dislodgement. - Properly distribute the weight of the load across the vehicle's axles, adhering to the Gross Vehicle Mass (GVM) limitations specified by the manufacturer. - Provide training for staff on safe loading practices and procedures, including correct lifting techniques, to reduce the likelihood of injury during the loading and unloading process. - Clearly label items and equipment with their respective weights, ensuring that the combined weight does not exceed the vehicle's maximum capacity. - Require drivers to have the appropriate licenses and qualifications for operating heavy machinery and driving vehicles with large loads.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Develop procedures for managing unexpected situations during transport, such as flat tires or adverse weather conditions, in order to maintain safety and control over the situation until it can be resolved. - Regularly review and update transportation routes to minimise potential hazards and obstacles. - Establish an effective communication protocol between drivers and other staff involved in the transportation process to ensure quick responses to any issues that may arise during transit. - Conduct regular maintenance checks on vehicles and equipment, focusing on areas where wear and tear could compromise load security. - Use signage and warning lights, if required, to alert other road users to the presence of large or potentially hazardous load, reducing the risk of accidents involving other vehicles. - Implement a system for reporting and monitoring incidents related to load transportation, allowing for continuous improvement and refinement of transport processes. - Encourage open dialogue and collaboration between management, employees, and workplace health and safety representatives when addressing any identified hazards and developing appropriate control measures.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
