

## Ice Rink Assembly And Disassembly | SAFE WORK METHOD STATEMENT (SWMS)

### TASK OR ACTIVITY: Ice Rink Assembly And Disassembly

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person:	Phone:	Email:

### THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:
Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.		
Full Name:	Title:	Phone:

### ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

### NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

## CLIENT OR PRINCIPAL CONTRACTOR DETAILS

SCOPE OF WORKS

## ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

☐ involves a risk of a person falling more than 2 meters

☐ is carried out on or near pressurised gas mains or piping

☐ is carried out on a telecommunication tower

☐ is carried out on or near chemical, fuel or refrigerant lines

☐ involves demolition of an element of a structure that is load-bearing

☐ is carried out on or near energised electrical installations or services

☐ involves demolition of an element related to the physical integrity of a structure

☐ is carried out in an area that may have a contaminated or flammable atmosphere

☐ involves, or is likely to involve, disturbing asbestos

☐ involves tilt-up or precast concrete

☐ involves structural alteration or repair that requires temporary support to prevent collapse

☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor

☐ is carried out in or near a confined space

☐ is carried out in an area of a workplace where there is any movement of powered mobile plant

☐ is carried out in/near a shaft or trench deeper than 2m or tunnel involving use of explosives

☐ is carried out in areas with artificial extremes of temperature.

☐ is carried out in or near water or other liquid that involves a risk of drowning.

☐ involves diving work.

## ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX									
LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS	
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			<p><b>Elimination</b> Remove the hazard.</p> <p><b>Substitution</b> Replace the hazard.</p> <p><b>Isolation</b> Isolate People from the hazard</p> <p><b>Engineering</b> Isolate the hazard.</p> <p><b>Administrative</b> Change the work.</p> <p><b>PPE</b></p>	
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED		
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.		
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.		
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records		

**Notes on Hierarchy of Controls:** Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.

PERSONAL PROTECTIVE EQUIPMENT (PPE)											
Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Improper equipment, lack of safety gear	2M	<ul style="list-style-type: none"> <li>- Conduct a thorough risk assessment prior to beginning any work on the ice rink assembly and disassembly.</li> <li>- Ensure all equipment is inspected for proper function and safety compliance before use.</li> <li>- Provide training for all personnel on the specific tools and equipment used in the assembly and disassembly process.</li> <li>- Supply and enforce the use of Personal Protective Equipment (PPE) appropriate for the tasks, such as helmets, gloves, and non-slip footwear.</li> <li>- Maintain clear communication among team members using radios or agreed hand signals to prevent misunderstandings.</li> <li>- Develop and implement a site-specific safety plan that includes emergency procedures and contact information for first responders.</li> <li>- Restrict access to the work area to authorised personnel only, and use barriers or signage to keep bystanders at a safe distance.</li> <li>- Schedule regular breaks to prevent fatigue and maintain high levels of concentration among workers.</li> <li>- Designate an experienced supervisor to oversee the assembly and disassembly process, ensuring adherence to safety protocols.</li> <li>- Keep the workspace tidy and organised by removing tripping hazards and clutter as soon as they appear.</li> <li>- Have readily accessible first aid kits and ensure that trained first aiders are present during all phases of the project.</li> <li>- Perform regular safety audits to monitor compliance with safety measures and make adjustments as necessary.</li> </ul>	1L
2. Site Setup	Slippery surface, improper lighting	3H	<ul style="list-style-type: none"> <li>- Conduct a risk assessment of the site to identify specific areas prone to slipperiness and note them for extra precaution.</li> <li>- Install non-slip mats or temporary flooring in high-traffic areas to reduce the risk of slips and falls.</li> <li>- Provide adequate lighting throughout the site, especially in darker or shadowed areas, to ensure clear visibility.</li> <li>- Implement wet floor signage in areas identified as slippery to alert workers and visitors to potential hazards.</li> <li>- Ensure emergency lighting systems are tested and operational in case of a power outage or reduced visibility conditions.</li> <li>- Equip all workers with appropriate non-slip footwear designed for icy or slick conditions.</li> </ul>	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			<ul style="list-style-type: none"> <li>- Schedule regular checks of the ice surface and surrounding areas for moisture buildup, leaks, or other hazards contributing to slipperiness.</li> <li>- Use anti-slip coatings or substances on tools and equipment handles to prevent accidental drops due to wet conditions.</li> <li>- Ensure all electrical cords and lighting fixtures are secured and not causing trip hazards.</li> <li>- Position temporary lighting units to eliminate shadows and glares that may impede visibility.</li> <li>- Organise a pre-setup briefing session with all workers to discuss expected hazards and the importance of maintaining awareness of slippery surfaces and lighting conditions.</li> <li>- Develop an emergency response plan specifically addressing incidents related to slipping or poor visibility, ensuring all personnel are trained in its execution.</li> </ul>	
3. Unloading Ice Rink Equipment	Manual handling injuries, close contact areas	4M	<ul style="list-style-type: none"> <li>- Provide manual handling training for staff involved in unloading to ensure proper lifting techniques are used.</li> <li>- Use mechanical aids such as forklifts or trolleys to reduce the need for manual handling of heavy items.</li> <li>- Ensure adequate lighting in the unloading area to prevent accidents due to poor visibility.</li> <li>- Designate a clear pathway for equipment movement to minimise close contact and potential collisions.</li> <li>- Ensure that the unloading area is flat and free of obstacles to prevent trips and falls.</li> <li>- Implement team lifting procedures for heavy or awkward loads to distribute weight evenly among workers.</li> <li>- Schedule sufficient rest breaks to prevent fatigue, which can contribute to poor handling practices.</li> <li>- Ensure all staff wear appropriate personal protective equipment, such as gloves and steel-capped boots.</li> <li>- Maintain communication devices like two-way radios to coordinate movements and identify potential hazards quickly.</li> <li>- Inspect equipment prior to use to ensure it's in proper working condition without defects.</li> <li>- Outline emergency procedures and have first aid kits readily accessible in case of an injury.</li> <li>- Limit the number of people in the unloading area to reduce close contact risks and crowding.</li> <li>- Conduct regular safety briefings to refresh staff on risk awareness and control measures specific to the tasks at hand.</li> </ul>	2M
4. Assembling the Ice Rink	Incorrect assembly, puncture or cut injuries	3H	<div></div> <div></div>	1L

## EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

## SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

## SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

**The SWMS must be reviewed regularly** to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review must be carried out in consultation with workers (including contractors and sub-contractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

**The SWMS must be monitored regularly** for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

## SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	<input checked="" type="checkbox"/>	
All relevant personnel consulted during the development of the SWMS.	<input checked="" type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input checked="" type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input checked="" type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input checked="" type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input checked="" type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input checked="" type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	<input checked="" type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input checked="" type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input checked="" type="checkbox"/>	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input checked="" type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input checked="" type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input checked="" type="checkbox"/>	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	<input checked="" type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input checked="" type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input checked="" type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input checked="" type="checkbox"/>
