

Injection Moulder	SAFE WORK METHOD ST	ATEMENT (SWMS)	
TA	SK OR ACTIVITY: Injection Moul	der	
Business Name: [Company Name]		ABN: [ABN]	SWMS#
Business Address: [Company Address]			
Contact Person:	Phone: [Phone]	E fil:	
THIS SAFE WORK METHOD	STATEMENT IS APPROVED BY	THE POST THE PROJECT	
Under the Work Health and Safety Regulation (WHS Regulation), a person conduct the proposed work starts.	cting a business or undertaking (N 3U) is	required to ture at a safe work method s	tatement (SWMS) is prepared before
Full Name:			
Signature:		Title:	Date:
Details of the person(s) responsible for ensuring implementation, monitoring a	ompliance of the SWMS well as review	s and modifications of the SWMS.	
Full Name:		Title:	Phone:
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS WMS. ST HAVE THE FOLLOWING COMMUNICATED	N. 1E AND DATED SIGNATURE OF A CO. MUNICATED TO IN THE DEVELO	LL RELEVANT PERSONNEL WHO HAVE BI PMENT AND APPROVAL OF THIS SWMS	EEN CONSULTED AND
Safety meetings or toolbox talks will be sched ed in accordance with egislative requirements to first identify any site hazards, conditions unical those hazards and then to further take steps to either the conditions of the conditions are or conditions.	NAME	SIGNATURE	DATE
If an incident or a near miss occurs, all work must steam ately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

- 1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
- 2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS: and.
- 3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Tripping hazards, Electrical hazards	2M	 Conduct a thorough inspection of the workplace to identify and remove any tripping hazards, such as loose cables, debris, or objects once floor in the work area. Ensure proper housekeeping is maintained the sphout the shift to reduce the risk of tripping hazards. Clearly mark any immovable obstacles or use ven struces with warning signs or hazard tape, making workers aware of potents. Provide adequate training for all employees work on on injection moulders to ensure they understand how to afely operate the action of and manage risks associated with electrochazard. Install appropriate cable in hagen at systems ach as cable trays or conduits, to keep electric bords and coles near adjourned, minimising tripping hazards. Record ty inspect testand maintain a electrical equipment, including power outlet or ension of as, and injection moulder equipment, to prevent electrical faults or darning and columns and injection moulder equipment, to prevent electrical faults or darning and columns around the injection moulder work area, using barriers or markin. Be oblishable clear walkways around the injection moulder work area, using barriers or markin. The floor to designate safe areas for movement. Applement a lockout/tagout procedure for electrical equipment during maintenance, reports, or cleaning activities to ensure the equipment is safe and cannot accidentally start up, posing an electrical hazard. Keep workspaces well-lit, properly ventilated, and clean, reducing the chance of obscured trip hazards or other accidents related to poor visibility. If possible, consider using cordless tools or battery-operated equipment to minimise the need for electrical cords and associated hazards. Encourage open communication among employees, promoting a culture of safety where workers feel comfortable reporting potential hazards or near-misses, allowing for continuous improvement in hazard mitigation and prevention. 	1L	
2. Material Loading	Manual handling, Dust exposure	2M	 Proper training: Ensure all workers involved in the material loading process are adequately trained in manual handling, lifting techniques, and the safe operation of the injection moulder. Limit load weight: Implement weight limits for the materials being handled to minimise the risk of injury due to lifting excessive loads. Use mechanical aids: Encourage the use of mechanical aids such as trolleys or pallet trucks to help reduce manual handling risks. Good housekeeping: Keep the work area free of clutter and debris to prevent slips, trips, and falls during the material loading process. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Personal protective equipment (PPE): Require workers to wear appropriate PPE, including gloves, safety goggles, and dust masks or respirators, to prevent exposure to dust and other hazardous substances.		
			- Ventilation systems: Install and maintain ader the ventilation systems in the workplace to minimise dust exposure.		
			- Pre-start checks: Implement pre-start check on machinery before each shift to ensure it is in proper working order and safe to		
			- Load management plan: Develop a clear load in agement can that outlines individual responsibilities and revired actions during the careful loading process.		
			- Clear signage: Possessigns garding hazards and safety instructions for both manual handling and dust posure the injection moulder site.		
			- Regular breaks and rotate tasks if poss to min, se of cal strain and verexertion.		
			- Eme ex response plan: Have a well-defined emergency response plan in place in case of incidents in plying injuries, dust explosions, or equipment malfunctions.		
			- Safe s cking echniques: Ensure workers are trained in safe stacking techniques preven loads from becoming unstable or collapsing.		
	•		- Con partial ration: Facilitate open communication between workers and supervisors address on y concerns or potential hazards as they arise.		
			- view and continuous improvement: Regularly review and update safety procedures and control measures based on worker feedback and ongoing risk assessments to ensure optimal workplace health and safety.		
			- Proper training and supervision: Ensure all workers operating the injection moulder receive thorough training on machine setup, operation, and safety protocols, with close supervision provided for inexperienced operators.		
			- Pre-start inspection: Before beginning any machine set-up, conduct a comprehensive pre-start inspection, verifying that every component of the machine is functioning correctly and ensuring that guarding is in place to prevent crushing or entrapment.		
3. Machine Set-up	Crushing hazard, Entrapment	3H	- Lockout/tagout procedures: Implement lockout/tagout procedures during machine set-up and maintenance to ensure equipment remains de-energised and cannot be started unexpectedly, causing injury hazards.	2M	
			- Clearly labelled emergency stop buttons: Make sure the injection moulder is equipped with easily accessible and clearly marked emergency stop buttons in case an operator needs to shut down the machine immediately.		
			- Use of personal protective equipment (PPE): Require all workers involved in machine set-up and operation to wear appropriate PPE, such as safety gloves, goggles, and ear protection, reducing the risk of injury from potential hazards.		

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Distribute operating manuals: Provide up-to-date operating manuals for each worker, covering safety procedures and troubleshooting methods for the injection moulding machine.		
			- Adherence to manufacturer's guidelines: Follow manufacturer's recommendations on machine set-up and maintenance, ensured that components are set up according to specifications and tested before se.		
			- Safe access to machine workspace: Ensure and adequate and safe entry and exit space around the machine to minimise the notion of entrapmed when setting up or maintaining equipment.		
			- Installation of light sort or presence sense ancorporate light curtains or similar sensor to sology detect then a worker is too close to the machinery, prompting are matter shuted in to present injurious.		
			- Regular main plance a conspections and duct routine maintenance checks to ensure at all goods werlocks, and sarety devices are in proper working condition, minimally the potential risks associated with crushing and entrapment.		
			- Estab this common ation procedures: Implement clear communication protocols between machine open are and maintenance staff so that any issues can be quickly tentified and a ressed, minimising potential hazards.		
			- De that d'exclusion zones: Establish designated areas where only authorised ersonne de allowed to access during machine set-up and operation, keeping other rickers at a safe distance from the injection moulder and reducing the risk of injury due to crushing or entrapment.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

		SAF WO A	STATEMENT	MONITORING AND R	EVIEW		
The SWMS must be reviewed regularly to rake sure it remains effective and must be reviewed (and revised if necessary) if relevant control measure are subcontracted, are very well-benefit who may be affected by the operation of the SWMS and their health and safety representatives who redesented that work group at the workplace. When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.				The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to: 1. Spot Checks. 2. Consultation with workers, contractors and sub-contractors. 3. Internal audits on a continual basis. An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.			
Names and signatures of all relevant personnel consulted during the development of the SWMS.		P A	
Name, signature, position and date signed of the person approving the SWMS.			
Specific personnel and qualifications, experience is noted in the SWMS.			
Provides a step-by-step process of tasks required to carry out the activity or task.			
Adequate risk assessment of any identified hazards has been completed.			
Foreseeable hazards are identified and documented for each step.			
Any hazards listed in any site risk assessments have been added to the SWN			
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.			
Check control measures added to the SWMS are the most effections.			
Responsible person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is assigned and listed on the SWMS for the imperent person is as a sign of the SWMS for the imperent person is a sign of the SWMS			
Permit requirements specified, such as Hot Work, Veral Heights etc.			
SWMS identifies plant and equipment to be u d.			
Details of inspection checks required for any equipment listed at noted on the SWMS.			
Describes any mandatory qualifications, experience raining skills required to perform the work.			
Applicable personal protective equipment is selected on the SWMS.			
Lists any required permits or licenses.			
Reflects and documents any legislative references and/or Australian Standards.			
Identifies any hazardous substances used with specific control measures in line with any SDS.
