Instal Tree Supports | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Instal Tree Supports

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person:	Phone:	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, assess risk to communicate those hazards and then to further take steps to either eliminate or control each hazard.	
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.	
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.	
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	
Project Address:	
Project Manager:	
Contact Phone:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters	☐ is carried out on or near pressurised gas mains or piping
☐ is carried out on a telecommunication tower	☐ is carried out on or near chemical, fuel or refrigerant lines
☐ involves demolition of an element of a structure that is load-bearing	☐ is carried out on or near energised electrical installations or services
☐ involves demolition of an element related to the physical integrity of structures	☐ is carried out in an area that may have a contaminated or flammable atmosphere
☐ involves, or is likely to involve, disturbing asbestos	☐ involves tilt-up or precast concrete
☐ involves structural alteration or repair that requires temporary support to prevent collapse	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
☐ is carried out in or near a confined space	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant
☐ is carried out in/near a shaft or trench deeper than 1.5 m or tunnel involving use of explosives	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEE
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review befo work starts.
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	nitor and ke records

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferr en co lling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the most e tive, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Prote ve quipm) is the least effective method.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Falling trees, Inadequate training	3H , 2M	- Conduct a pre-start safety briefing for all workers to ensure they understand the hazards and control measures associated with tree support installation. - Verify that all workers involved in the task are properly trained and qualified for tree work according to industry standards. - Conduct a thorough risk assessment of the work area prior to commencing operations to identify any potential dangers, including unstable trees or hazardous weather conditions. - Use appropriate personal protective equipment (PPE) such as helmets, gloves, high-visibility clothing, and safety boots to minimise injury risk from falling branches or tools. - Ensure chainsaws and other cutting equipment are regularly maintained, inspected before use, and operated only by trained personnel. - Establish exclusion zones marked with barriers or cones to prevent unauthorised access and reduce the risk of injury from falling objects during tree support installation. - Implement safe work positioning techniques using harnesses and climbing ropes to secure workers while working at heights in trees. - Engage an experienced spotter on the ground to monitor the worksite, communicate with workers, and alert them to any emerging hazards or changes in conditions. - Avoid working in adverse weather conditions such as high winds or storms which increase the likelihood of falling branches or trees. - Develop emergency response procedures specific to the site, ensuring that all workers are familiar with the plan and know how to summon assistance if needed. - Regularly review and update training programmes to incorporate new safety techniques and technological advancements in arboriculture. - Maintain a log of all incidents and near-misses to track patterns and inform future safety improvements, ensuring all workers contribute to a continuous improvement culture.	2M , 1L
2. Equipment Inspection	Faulty equipment, Lack of understanding about operation	2M, 3H	- Conduct pre-inspection checks on all equipment for visible damage before use. - Ensure all personnel involved in the task are trained and competent in operating the equipment. - Maintain a regular maintenance schedule for all tools and machinery to ensure they are in proper working condition. - Clearly label any equipment that is faulty or out of service, and remove it from the work area until repaired or replaced. - Provide safety information and operation manuals for each piece of equipment available on site for reference. - Use equipment inspection checklists to ensure thorough examination of each tool or machine.	1L , 2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Verify that any necessary certification or licensing for specialised equipment is current and valid. - Implement a reporting system for any equipment faults encountered during operations. - Educate workers on the potential risks of using faulty equipment and their role in identifying issues. - Rotate the responsibility for equipment inspections among trained personnel to ensure an unbiased assessment. - Make use of lockout/tagout procedures for potentially dangerous equipment to prevent accidental operation.	
3. Site Analysis	Unstable soil, Hidden obstacles	2M , 3H	- Conduct a thorough visual inspection of the site to identify any obvious signs of unstable soil, such as cracks, bulges, or water pooling. - Use ground-penetrating radar or similar technology to detect hidden obstacles below the surface that could interfere with equipment or pose a risk during tree support installation. - Consult recent geotechnical reports for the area to understand soil stability and any previous incidents related to soil movement or instability. - Implement exclusion zones around identified areas of unstable soil, ensuring they are clearly marked with signage and physical barriers where necessary. - Engage a qualified geotechnical engineer to assess areas where instability is suspected and provide recommendations for mitigating risks. - Use manual probing or digging tools in areas known or suspected to contain hidden obstacles, taking care to avoid damage to existing underground utilities or structures. - Plan for adverse weather conditions by scheduling work during periods when the soil is less likely to be waterlogged or more susceptible to shifting. - Provide workers with site-specific safety briefings that include information on hidden obstacles and how to safely navigate these areas. - Ensure all machinery and equipment used on-site are suitable for the terrain and fitted with appropriate stabilisation controls to prevent tipping or sinking in unstable soil. - Maintain clear communication channels among the team to report findings of unstable soil or hidden obstacles promptly, allowing for rapid adjustment of work plans. - Develop and practice emergency response procedures tailored to potential incidents involving soil collapse or obstruction by hidden obstacles.	1L , 2M
4. Installation Planning	Incorrect placement, Structural failure	2M , 3H	[redacted]	1L , 2M

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAMPLE

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	☒	
All relevant personnel consulted during the development of the SWMS.	☒	
Name, signature, position and date signed of the person approving the SWMS.	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☒	
Provides a step-by-step process of tasks required to carry out the activity or task.	☒	
Adequate risk assessment of any identified hazards has been completed.	☒	
Foreseeable hazards are identified and documented for each step.	☒	
Any hazards listed in any site risk assessments have been added to the SWMS.	☒	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	☒	
Check control measures added to the SWMS are the most effective solutions.	☒	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	☒	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	☒	
SWMS identifies plant and equipment to be used	☒	
Details of inspection checks required for any equipment listed are noted on the SWMS.	☒	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	☒	
Applicable personal protective equipment is selected on the SWMS.	☒	
Reflects and documents any legislative references and/or Australian Standards.	☒	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☒
