Installation Of Pools or Spas | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Installation Of Pools or Spas

Business Name:		ABN:	SWMS#
Business Address:			
Contact Person:	Phone:	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, assess risk to communicate those hazards and then to further take steps to either eliminate or control each hazard.	
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.	
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.	
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters	☐ is carried out on or near pressurised gas mains or piping
☐ is carried out on a telecommunication tower	☐ is carried out on or near chemical, fuel or refrigerant lines
☐ involves demolition of an element of a structure that is load-bearing	☐ is carried out on or near energised electrical installations or services
☐ involves demolition of an element related to the physical integrity of structures	☐ is carried out in an area that may have a contaminated or flammable atmosphere
☐ involves, or is likely to involve, disturbing asbestos	☐ involves tilt-up or precast concrete
☐ involves structural alteration or repair that requires temporary support to prevent collapse	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
☐ is carried out in or near a confined space	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant
☐ is carried out in/near a shaft or trench deeper than 1.5 m or tunnel involving use of explosives	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

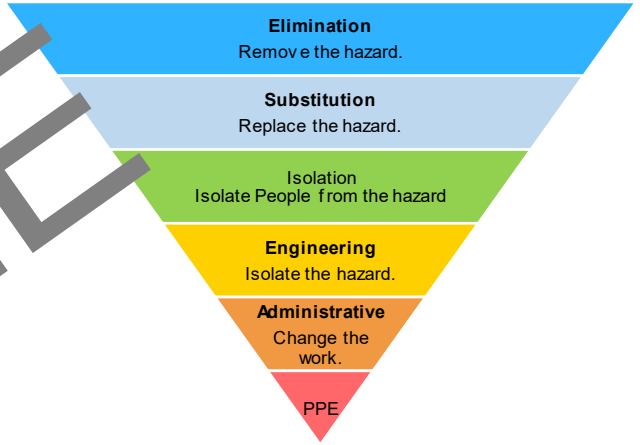
ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEE
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review befo work starts.
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	nitor and ke records

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferr en co lling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the most e tive, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Prote ve quipm) is the least effective method.

HEIRARCHY OF CONTROLS



PERS NAL P TECTIVE EQUIPMENT (PPE)

Select the appropriate PPE abo suitable for the equipment used or the job task being performed (if applicable).

Permit or Licenses Requirements	Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Slipping, tripping hazards, Inadequate lighting.	2M	- Clear the area of any obstacles or debris to minimise tripping hazards. - Regularly inspect the work site to ensure no new risks have arisen due to ongoing activities. - Use barricades or signage to highlight uneven surfaces or other potential trip hazards. - Ensure that all walkways and access points are well-lit to prevent accidents in low light conditions. - Install temporary lighting if necessary, particularly if working hours extend into early morning or evening. - Utilise non-slip mats or surfaces in areas prone to becoming slippery when wet. - Conduct a pre-work safety briefing focusing on the importance of watching where one walks and maintaining clear pathways. - Require workers to wear appropriate footwear with good grip and support to reduce slipping incidents. - Monitor weather conditions closely; suspend work if heavy rain creates hazardous conditions until they can be safely managed. - Keep the work area tidy by regularly removing offcuts, packaging, and other waste materials. - Position equipment and materials strategically to avoid creating additional hazards. - Ensure all pathways and work areas have adequate drainage to prevent water accumulation. - Perform a risk assessment specifically for each day or shift change to address any dynamic safety concerns related to ongoing site conditions.	1L
2. Assessment of Site	Power lines, Underground services.	3H	- Conduct a visual inspection to identify the location of overhead power lines and plan the route and position of equipment accordingly to avoid close proximity. - Use a cable avoidance tool (CAT) to detect any underground services before commencing digging or excavation. - Consult with local utility companies to obtain accurate maps or blueprints that reveal the location of underground pipes, cables, and other utilities. - Implement exclusion zones around identified power lines, ensuring that no machinery or personnel enter these zones during the project. - Employ a spotter whenever operating machinery near identified hazards to provide immediate warnings and prevent accidents. - If working near power lines, request temporary disconnection or insulation of the lines from the electricity provider for the duration of the installation process. - Ensure all workers are briefed on emergency procedures and contact information for local utility providers in case of accidental disturbance to underground services. - Use ground-penetrating radar (GPR) systems for a more detailed assessment of what is beneath the surface if previous methods do not provide sufficient information.	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Place visible signage and barriers to indicate the presence of buried services and overhead hazards to all personnel on site. - Equip all machinery that might interact with electrical hazards with non-conductive safety guards or insulating materials. - Maintain regular tool and equipment checks to ensure they are in good working condition and fit for use near electrical hazards. - Schedule regular briefings and refresher training sessions on working safely around underground and overhead hazards. - Develop and maintain a comprehensive job safety analysis specific to the site that includes potential risks related to hidden services and power lines. - Document all findings and preventative strategies employed during the assessment phase in the SWMS to ensure transparency and coherence throughout the project lifecycle.	
3. Excavation	Collapse of surrounding ar... Operating heavy ma...ery.	4A	- Conduct a thorough risk assessment before beginning excavation to identify potential dangers related to the work environment and task. - Verify that all operating personnel are properly trained and hold current licenses for handling excavation machinery such as excavators or backhoes. - Implement shoring or benching techniques to stabilise the sides of the excavation site, preventing soil collapse. - Use barricades and signage around the perimeter of the excavation site to alert workers and visitors to the hazards present. - Regularly inspect the excavation site for signs of earth movement or instability, especially after weather events like rain. - Ensure that spoil piles are placed at a safe distance from the edge of the excavation to prevent additional load on the trench edges. - Develop and enforce a clear communication plan for vehicle and machinery operators within the work area to avoid collisions or near-miss incidents. - Equip all machinery with well-maintained safety features such as beepers, lights, and sensors that notify the presence of workers or obstacles nearby. - Schedule regular maintenance checks on all heavy machinery to confirm operational efficiency and safety. - Establish rescue procedures and have emergency response equipment accessible onsite to deal with accidents should they occur. - Limit the access to the excavation site strictly to essential personal who are aware of the safety practices and hazard recognitions.	2M
4. Formwork Installation	Working at heights, Manual handling risks.	3H	[redacted]	1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	☒	
All relevant personnel consulted during the development of the SWMS.	☒	
Name, signature, position and date signed of the person approving the SWMS.	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☒	
Provides a step-by-step process of tasks required to carry out the activity or task.	☒	
Adequate risk assessment of any identified hazards has been completed.	☒	
Foreseeable hazards are identified and documented for each step.	☒	
Any hazards listed in any site risk assessments have been added to the SWMS.	☒	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	☒	
Check control measures added to the SWMS are the most effective solutions.	☒	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	☒	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	☒	
SWMS identifies plant and equipment to be used	☒	
Details of inspection checks required for any equipment listed are noted on the SWMS.	☒	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	☒	
Applicable personal protective equipment is selected on the SWMS.	☒	
Reflects and documents any legislative references and/or Australian Standards.	☒	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☒
