

### Installation of PVC Pipe in Trench Greater Than 1.5 Metres | SAFE WORK METHOD STATEMENT (SWMS) TASK OR ACTIVITY: Installation of PVC Pipe in Trench Greater Than 1.5 Metres **Business Name:** ABN: SWMS# **Business Address:** Contact Person: Phone: THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PC. OF THE PROJECT that a safe work method statement (SWMS) is prepared before Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or und U) is required to e the proposed work starts. Full Name: Title: Date: Signature: SWI as well as reviews and modifications of the SWMS. Details of the person(s) responsible for ensuring implementation, monitoring compliar Full Name: Title: Phone: ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS WMS NA OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE HAVE THE FOLLOWING COMMUNICATED **PEVELOPMENT AND APPROVAL OF THIS SWMS** Safety meetings or toolbox talks will be schedled in account e with egislative requirements to first identify any site hazards nuni te those hazards and then to further take steps to either eliminate or con I each hazard. If an incident or a near miss occurs, all work must six diately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity. Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel. The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Lack of training, insufficient planning	ЗН	<ul> <li>Conduct thorough training sessions for wears, focusing on trench safety, PPE usage, and emergency response procedures.</li> <li>Ensure all workers have completed a recognizate empetency-based training program for working in and around trenches.</li> <li>Develop a detailed Safe Wor Method Statement WWM expecific to the site conditions and installation process.</li> <li>Conduct a propork haza casses ment each by to identify any changes in conditions or new hazards present.</li> <li>Implement a took per exsystem to expert that only authorised and trained personnel are entering the trench a.</li> <li>Engages utalified angineer to assess and design trench supports and shoring systems suitable for the specifit oil to earn members.</li> <li>Fistable clear ammunication protocols, including hand signals and designated spotters, to maintain expert to equate signage around the worksite to warm of potential hazards and restrict unauthorised ness.</li> <li>Supply personal protective equipment (PPE) such as hard hats, gloves, high-visibility clothing, and steel-apped boots to all workers.</li> <li>Develop an emergency response plan tailored to trench-related incidents and conduct regular drills to ensure readiness.</li> <li>Schedule regular inspections by a competent person to assess trench stability and compliance with control measures.</li> <li>Allocate sufficient resources and time for the safe completion of tasks, avoiding shortcuts that may compromise safety.</li> <li>Maintain updated records of training, permits, SWMS, and inspections to ensure accountability and compliance with regulations.</li> </ul>	2M
2. Site Inspection	Uneven ground, hidden utilities	4A	<ul> <li>Conduct a detailed site survey before work begins to identify uneven ground and possible hidden utilities.</li> <li>Use utility maps and service plans to locate any underground services that may be present in the work area.</li> <li>Employ cable locators or ground-penetrating radar (GPR) to detect hidden utilities and ensure a more accurate survey.</li> <li>Install high-visibility markers and signage around identified hazard areas to alert workers and equipment operators.</li> </ul>	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Provide training for workers on recognising and avoiding hazards related to uneven ground and hidden utilities.	
			- Implement a permit-to-work system that include view and approval by a qualified supervisor before any trench work begins.	
			- Establish communication protocols, such a radio checkers, especially when near known or suspected utility lines.	
			- Use appropriate personal protective equipment (PPE), including safety boots with ankle support, to mitigate risks associated with ineven terrain.	
			- Create safe access paths an express routes by the eng select areas and using stable platforms or matting where necessary.	
			- Develop are mergency reponse and the suddes specific procedures for incidents related to utility strikes or trips caused by even such	
			- Reg y mon, the site conditions and adjust control measures as needed to address newly emerging hazar is change in the work environment.	
			- Condust present chases on all machinery and equipment to ensure they are in good working condition.	
			- rify to tall to s and equipment have been inspected and are compliant with relevant safety	
			(eep a log of maintenance records for all machinery and equipment to track service history and any rechirs.	
			Ensure only qualified personnel operate the machinery, verifying licenses and training certificates.	
	·		- Use properly calibrated equipment and check calibration certificates where applicable.	
			- Replace any faulty or damaged tools and equipment immediately before commencing work.	
3. Equipment Check	Faulty machinery, inadequate tools	ЗН	- Provide adequate storage for tools and equipment to prevent damage when not in use.	1L
			- Implement a lockout/tagout procedure for any machinery identified as faulty until repairs are completed.	
			- Conduct visual inspections of tools and equipment daily before use to identify any obvious defects.	
			- Ensure availability of necessary protective devices, such as guards and barriers, for machinery being used.	
			- Regularly audit the condition of tools and equipment as part of routine safety meetings.	
			- Label and separate damaged or worn-out tools from operational ones to prevent accidental usage.	
			- Ensure adequate lighting in the area to perform thorough equipment checks safely.	
			- Brief all workers about potential risks associated with faulty machinery and inadequate tools during toolbox talks.	
4. PPE Allocation	Missing protective gear, ill-fitting equipment	3H		1L

### **EMERGENCY RESPONSE - CALL 000 FOR EMERGENCIES**

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

### SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature		Date

### SAFE WORK IN 'THIS 'S' ITEM ON MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remain effect, and must be reviewed (and revised if necessary) if relevant control measures are revised. The view as should be carried out in consultation with workers (including contractors as unputractors of the SWMS and their health and safety registeratives who represented that work group at the workplace.

When the SWMS has been revised the PCBD mest ensure the advised that a revision has been made and how they can accept the revised SWMS, including all persons who will need to change a work procedure or system as a rest of the review are advised of the changes in a way that will enable them to implement their duties the theoretical with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- Spot Checks.
- Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

### SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
TIEMS WHICH MOST BE INCLUDED IN THE SWINS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.		
All relevant personnel consulted during the development of the SWMS.		
Name, signature, position and date signed of the person approving the SWMS.		
Specific personnel and qualifications, experience is noted in the SWMS.		
Provides a step-by-step process of tasks required to carry out the activity or task.		
Adequate risk assessment of any identified hazards has been completed.	$\boxtimes$	
Foreseeable hazards are identified and documented for each step.		
Any hazards listed in any site risk assessments have been added to the SV 5.		
SWMS initial risk (IR) column as well as residual risk (RR) column ampleted.		
Check control measures added to the SWMS are the most effective sections.		
Responsible person is assigned and listed on the splenetation of control measures.		
Permit or licenses requirements specified, so in as Hot Work, Electrical Work, Work at Heights etc.		
SWMS identifies plant and equipment to be	$\boxtimes$	
Details of inspection checks required for any equipment lister are noted on the SWMS.		
Describes any mandatory qualifications, experience, and or skills required to perform the work.		
Applicable personal protective equipment is selected on the SWMS.		
Reflects and documents any legislative references and/or Australian Standards.		
Identifies any hazardous substances used with specific control measures in line with any SDS.
