

Isolation of Plant and Machinery | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Isolation of Plant and Machinery

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature: _____ Title: _____ Date: _____

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name: _____ Title: _____ Phone: _____

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED | **NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS**

	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, to conduct and communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS

Client:	SCOPE OF WORKS Provide a detailed description of the specific work being carried out (otherwise known as scope of works).
Project Name:	
Project Address:

Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

<input type="checkbox"/> involves a risk of a person falling more than 2 meters.	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping.
<input type="checkbox"/> is carried out on a telecommunication tower.	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines.
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing.	<input type="checkbox"/> is carried out on or near energised electrical installations or services.
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure.	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere.
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos.	<input type="checkbox"/> involves tilt-up or precast concrete.
<input type="checkbox"/> involves structural alteration or repair that requires temporary supports to prevent collapse.	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
<input type="checkbox"/> is carried out in or near a confined space.	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant.
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

<input type="checkbox"/> Forklift	<input type="checkbox"/> Crane/s	<input type="checkbox"/> Hoist/s	<input type="checkbox"/> Excavator	<input type="checkbox"/> Backhoe/Loader	<input type="checkbox"/> Boom Lift	<input type="checkbox"/> EWP	<input type="checkbox"/> Genie Lift
<input type="checkbox"/> Trencher	<input type="checkbox"/> Drilling Rig	<input type="checkbox"/> Trucks	<input type="checkbox"/> Formwork	<input type="checkbox"/> Bobcat	<input type="checkbox"/> Flammable Gas	<input type="checkbox"/> Fuel	<input type="checkbox"/> Dozer
<input type="checkbox"/> High Voltage	<input type="checkbox"/> Mulcher	<input type="checkbox"/> Tilt-up Panels	<input type="checkbox"/> Roller	<input type="checkbox"/> Scissor Lift	<input type="checkbox"/> Tractor	<input type="checkbox"/> Other -	

RISK MATRIX										
LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS		
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.		
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard		
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.		
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work.		
								PPE		

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.

PERSONAL PROTECTIVE EQUIPMENT (PPE)											
FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE/FACE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

- persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
- persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
- workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Incorrect isolation procedures, inadequate training	3H	<ul style="list-style-type: none"> - Provide comprehensive training for all workers on isolation procedures to ensure they are skilled and knowledgeable about the correct process for isolating plant and machinery. - Develop a clear, written isolation procedure for each equipment type or model, including step-by-step instructions and checklists to guide workers in implementing proper isolation techniques. - Clearly label all isolation points, including valve handles, circuit breakers, switches, and other equipment parts involved in the isolation process. - Implement a "lockout/tagout" system, where workers attach their personal locks and tags to isolation devices to signify that the equipment is being serviced and should not be operated. - Ensure that employees are familiar with and adhere to the hierarchy of control measures: elimination, substitution, engineering controls, administrative controls, and personal protective equipment (PPE). - Regularly inspect equipment to identify any potential issues with its operation or isolation methods, promptly addressing any problems discovered. - Establish regular refresher courses and training sessions for employees to review and update their knowledge on safe isolation practices. - Always consult and review the equipment's manufacturer guidelines when developing and updating the company's isolation procedures. - Implement a robust permit-to-work system that will document the necessary isolation steps and responsible personnel for each job, ensuring accountability and thorough communication. - Encourage workers to report any observed unsafe practices or conditions relating to equipment isolation, fostering a culture of constant improvement and safety awareness. - Regularly conduct risk assessments to identify potential hazards related to incorrect isolation procedures and establish appropriate control measures according to the principle of "as low as reasonably practicable" (ALARP). - Adopt a "zero tolerance" policy for bypassing or circumventing established isolation procedures, making it clear that all employees must follow the company's safety protocols at all times. - Designate and train specific employees as "Isolation Officers," who will be responsible for verifying the proper implementation of isolation techniques before work commences on a particular piece of equipment. - When introducing new equipment or machinery, proactively develop and implement effective isolation procedures in collaboration with the manufacturer, ensuring that workers are adequately prepared to work safely with the new technology. 	2M	
2. Lockout/Tagout	Unauthorised access, improper labeling	3H		1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Develop and implement a lockout/tagout (LOTO) procedure specifically tailored to the plant or machinery being isolated, detailing the correct sequence of steps to follow. - Provide lockout devices, such as padlocks or other physical barriers, that are unique to each authorised individual responsible for performing the isolation process on the plant or machinery. - Ensure access to key lockout/tagout equipment is controlled, logged, and available only to authorised personnel who have received training in its proper use. - Establish a well-defined and visible tagout system that includes warning signs and labels specifying the locked-out equipment, reason for lockout, and the name of the authorised person who performed the LOTO. - Conduct frequent inspections of the worksite to confirm that all lockout/tagout procedures are being followed correctly, including the use of appropriate signage and labeling. - Schedule regular refresher training sessions for employees who are authorised to perform LOTO procedures, emphasising the importance of following proper procedures and remaining vigilant in maintaining LOTO standards. - Implement a layered authorization system where multiple levels of management approve changes to LOTO processes, ensuring any alterations are necessary and carried out safely. - Enforce strict penalties for non-compliance with lockout/tagout procedures, including disciplinary action against individuals found to be bypassing required safety measures. - Set up an effective communication system between workers operating machinery and those responsible for isolating that equipment, ensuring constant awareness of work status and potential hazards. - Post emergency contact information in visible locations around the worksite, providing clear instructions for reporting any violations of lockout/tagout procedures. - Regularly update all lockout/tagout materials, such as training documentation, lockout devices, and tags, to maintain best practices and prevent lapses in safe working conditions. - Incorporate near-miss reporting into the workplace culture, encouraging employees to identify and communicate any potential shortcomings in lockout/tagout procedures. - Foster a positive safety culture where employees are empowered to speak up about concerns or issues they may have with isolation practices, promoting a proactive approach to resolving problems and maintaining a safe work environment. 		
3. Assess & Inspect	Inadequate inspection, unseen hazards	2M	<ul style="list-style-type: none"> - Implement a robust and well-documented inspection procedure to ensure all relevant aspects of the plant and machinery are assessed effectively. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Train and certify all personnel involved in isolation tasks on the specific machinery and safety best practices to identify potential hazards before they become an issue. - Allocate enough time for thorough assessments and inspections, taking into account the complexity and size of the machinery or plant involved. - Utilise detailed checklists that outline each element of the isolation process and which specifically address hazards related to this work step. - Conduct mandatory pre-start meetings to discuss the inspection process, highlighting any potential issues, concerns, or unusual circumstances that may require more in-depth investigation. - Employ visual aids such as diagrams, photos, and clear labeling, to assist inspectors in identifying hazards accurately and effectively. - Establish proper communication channels between the inspection team and other relevant stakeholders such as supervisors and maintenance personnel, to address queries or concerns promptly. - Encourage a culture of vigilance and accountability by giving inspectors the authority to halt work if hazards are identified during the assessment process and until the issues are resolved. - Use advanced technology, like remote camera systems or drone inspections, where possible, to supplement manual inspections and provide greater insights into hard-to-reach areas. - Schedule periodic audits of the isolation and inspection process to monitor its effectiveness, putting continuous improvements in place based on feedback. - Regularly review and update risk assessments, inspection procedures, and training materials to ensure continued relevancy and compliance with current standards and regulations. - Develop a thorough incident reporting and investigation process to learn from past events or near misses, using these experiences to improve future inspections. - Foster an open dialogue around workplace health and safety, encouraging workers at all levels to report potential hazards or areas of concern without fear of repercussion. 		
4. Disable Energy Sources	Electrical hazards, stored energy release	3H	<div style="background-color: black; width: 100%; height: 15px; margin-bottom: 5px;"></div> <div style="background-color: black; width: 100%; height: 15px; margin-bottom: 5px;"></div> <div style="background-color: black; width: 100%; height: 15px;"></div>	2M

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST			
This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.
