Kick Press | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Kick Press

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:

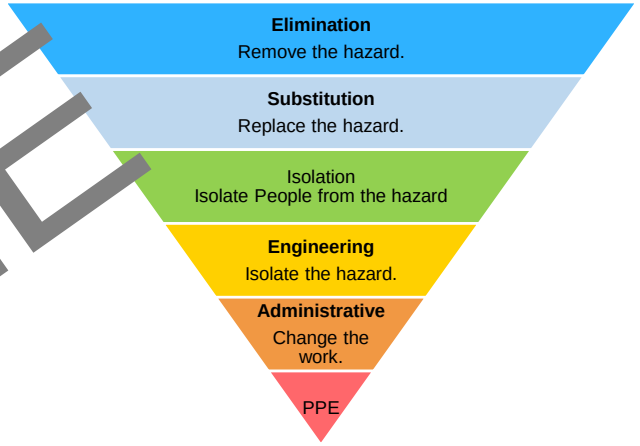
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip hazards, Falling equipment	2M	- Proper housekeeping: Regularly clean and organise the work area to minimise trip hazards caused by loose materials, tools, or debris on the floor. - Cord management: Use cable protectors or cord channels to prevent cords from becoming a trip hazard in walkways. - Non-slip flooring: Ensure that flooring is non-slip to reduce the likelihood of accidents due to slippery surfaces. - Signage: Display clear and visible warning signs to alert workers of potential trip hazards in their surroundings. - Training: Provide training to employees on the importance of adhering to safety guidelines within the workplace, especially in areas where risk of trip hazards is prevalent. - Equipment inspection: Regularly inspect kick press equipment for any loose or detached parts that could fall and potentially harm an employee. - Proper storage: Store unused equipment and tools securely to prevent them from falling and causing injuries. - Barrier installation: Install barriers around the work area to keep unauthorised personnel away from potential hazards. - Personal Protective Equipment (PPE): Ensure all employees wear appropriate PPE, such as steel-toed boots, to lessen the severity of injuries due to falling equipment or tripping. - Buddy system: Implement a buddy system where employees are required to work in pairs or groups, encouraging them to look out for each other's safety and report any hazardous situations. - Emergency response plan: Develop an emergency response plan in case of accidents related to preparation steps, including trip hazards and falling equipment, and ensure all employees are familiar with it. - Continuous improvement: Regularly review and update control measures based on risk assessments, incident reports, and employee feedback to continuously improve workplace health and safety standards.	1L	
2. Inspection	Electric shocks, Struck by moving parts	3H	- Regular maintenance checks: Schedule routine inspections for the Kick Press to ensure all parts are in good working condition and identify any signs of damage, wear, or potential electrical hazards. - Proper grounding: Ensure that the Kick Press is properly grounded, and all electrical connections are secure and in compliance with local safety regulations to prevent electrical shocks. - Lockout-tagout procedures: Implement lockout-tagout procedures whenever maintenance or repairs are taking place on the Kick Press to prevent unintended machinery movement and accidental startup during servicing.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Safety guards and covers: Install and maintain safety guards and covers on all moving parts of the Kick Press to minimise direct contact and eliminate the risk of workers getting struck by moving parts. - Employee training: Conduct comprehensive training programs for employees to educate them about using the Kick Press safely, recognizing potential hazards, and adhering to safety protocols. - Personal protective equipment (PPE): Provide appropriate PPE such as safety gloves, goggles, and closed-toe shoes to protect workers from possible electric shocks and injuries caused by moving parts. - Emergency stop button: Install easily accessible emergency stop button near the Kick Press to enable workers to stop the machine immediately in case of an emergency or hazard. - Clear signage: Place visible warning signs around the Kick Press area to inform workers of the potential risks associated with the machinery, such as electric shocks and moving parts. - Secure work area: Maintain a clean and organised workspace, ensuring access to the Kick Press is restricted to only trained and authorised personnel, reducing the risk of accidental exposure to hazards for other employees. - Periodic safety drills: Organise periodic safety drills for employees to familiarise them with the proper procedures in case of emergencies, including evacuating the area and shutting down the machine if necessary. - Safe operating procedures: Develop and document standard operating procedures (SOPs) for the Kick Press, emphasising safety measures to prevent electrical shocks and accidents involving moving parts. - Incident reporting: Establish a comprehensive incident reporting system to encourage employees to report hazards, near misses, accidents, and dangerous incidents promptly, allowing for corrective actions to be taken to prevent potential future incidents.		
3. Load Material	Manual handling injuries, Pinch points	2M	- Provide proper training and instructions to workers on the correct use of the kick press, handling materials, and maintaining safe distances from pinch points to reduce manual handling injuries. - Ensure workers use correct lifting techniques when moving materials, including squatting and lifting with the legs rather than bending at the waist. - Implement a suitable lifting equipment, such as hoists or pallet jacks, to help minimise the risk of manual handling injuries. - Regularly inspect and maintain the kick press to ensure all safety guards and mechanisms are functioning effectively, reducing the risk of pinch point hazards. - Ensure that work areas around the kick press are clear and free from clutter, minimising trip hazards and promoting easy access to load and unload materials.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Encourage periodic breaks for workers to stretch and rest, preventing muscle strains and fatigue associated with prolonged periods of manual handling. - Establish a buddy system which allows collaboration between team members during material loading and unloading procedures, reducing the potential for injuries caused by reaching or over-exertion. - Use appropriate personal protective equipment (PPE) – such as cut-resistant gloves and safety footwear – to protect hands and feet from any potential pinch point hazards. - Enforce a continuous risk assessment programme to identify any new hazards that may arise during material loading and unloading operations in the workspace. - Create visual safety spacing markers around the kick press machine to keep non-essential personnel away from pinch points and loading zones while active work is in progress. - Communicate emergency protocols to all staff, ensuring they understand the proper steps to take in situations such as equipment malfunction or injury. - Conduct regular audits of compliance with the established control measures to maintain a culture of safety and continuous improvement within the workplace. - Schedule routine reviews of safety procedures and potential hazards in response to ongoing changes in personnel or equipment requirements, ensuring that safety remains a priority as circumstances evolve.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
