Laboratory Glassware | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Laboratory Glassware

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

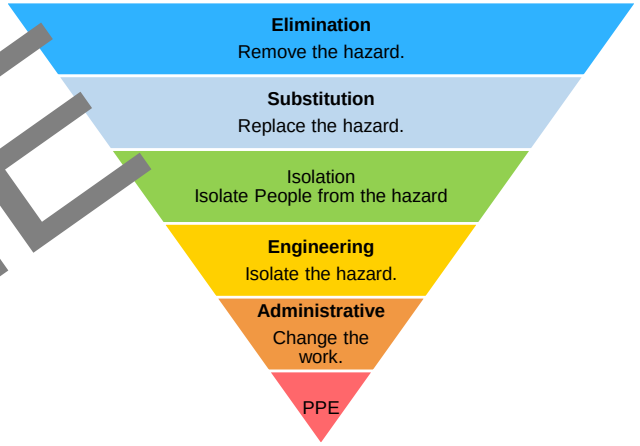
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Chemical exposure, Slip and trip hazards	2M	- Proper Storage: Ensure all chemicals and laboratory glassware are stored in designated, properly labelled cabinets or shelves to minimise the risk of chemical exposure or breakage. - Housekeeping: Regularly maintain clean and clutter-free workspaces, aisles, and walkways to prevent tripping and slipping hazards. - Appropriate PPE: Require staff to use appropriate personal protective equipment (PPE) such as lab coats, gloves, and safety glasses/goggles when working with chemicals and glassware. - Training: Provide employees with comprehensive training in handling, storing, and disposing of chemicals, as well as the use and maintenance of laboratory glassware. - Inventory Management: Regularly maintain an updated inventory of chemicals and glassware, including labelling and MSDS sheets. - Spill response: Develop and communicate a spill response plan for dealing with chemical spills, including proper containment and disposal procedures. - Ergonomic equipment: Utilise ergonomic equipment such as adjustable chairs, anti-fatigue mats, and proper lighting to ensure safe and comfortable working conditions. - Inspections: Regularly inspect laboratory glassware for cracks, chips, and other damage before use and dispose of any damaged items immediately. - Clear Signage: Post clear, visible signs indicating potential hazard areas, such as wet floors or areas where chemicals are used/stored. - Emergency Preparedness: Ensure employees are trained in emergency procedures, have access to emergency contacts, and know the location of safety equipment such as eye wash stations, fire extinguishers, and first aid kits.	1L	
2. Inspection	Glass breakage, Eye injury	3H	- Proper handling: Ensure all staff and technicians are trained in the safe handling of glassware to avoid breakage and potential hazards. - Personal protective equipment (PPE): Require employees to wear safety glasses or goggles, gloves, long sleeved lab coats, and closed-toe shoes during the inspection process. - Regular inspections: Schedule routine assessments of laboratory glassware to identify any chips, cracks or other imperfections that could lead to breakage or accidents. - Quality control: Implement a quality control system that rejects any compromised or sub-standard glassware immediately upon identification. - Storage and organisation: Establish designated storage areas for glassware, ensuring items are properly organised, supported, and labelled to minimise the risk of damage during inspection.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Use of proper tools: Equip staff with appropriate tools like rubber grips, tongs, or forceps to handle delicate or hot glassware during inspection without risking injury. - Safety training: Provide regular health and safety training specifically tailored to the hazards posed by handling and inspecting laboratory glassware. - Emergency response plan: Develop and share an emergency response plan outlining the steps to be taken in case of a glassware-related accident or injury. - Waste disposal: Maintain separate containers for broken or damaged glassware and educate employees on their proper use to prevent accidental injuries when discarding faulty items. - First aid provision: Have a well-stocked first aid kit is readily available and includes suitable equipment for dealing with glass-related injuries, such as eye wash stations and tweezers. - Reporting and monitoring: Encourage employees to report any incidents or near misses involving laboratory glassware so potential risks can be evaluated and further preventative measures implemented. - Signage and awareness: Install clear signage around the laboratory warning of the risks associated with handling glassware and reminding employees to follow safe procedures during inspection. Continuous improvement: Regularly review and assess the efficacy of implemented control measures to identify areas for improvement or optimisation in reducing the risks associated with glassware breakage and eye injury during inspection.		
3. Cleaning	Chemical spills, Cuts from broken glass	3H	- Proper training: Ensure that all laboratory staff are adequately trained in handling, cleaning, and storing glassware to minimise the risk of chemical spills or breakages. - Personal protective equipment (PPE): Staff should wear appropriate PPE, including gloves, eye protection, and lab coats when handling and cleaning glassware to avoid direct contact with hazardous chemicals. - Secure transport: Use trays or carriers specifically designed for glassware transport to prevent accidental spills or breakage during movement within the laboratory. - Spill containment: Place a suitable absorbent material, such as a spill mat, beneath glassware during cleaning to collect any spills or leaks and ensure prompt removal and disposal following manufacturer's guidelines. - Inspection and discard: Regularly inspect glassware for any signs of damage, including cracks or chips, and safely discard broken or compromised items according to established protocols. - Cleaning agents: Choose appropriate cleaning agents based on the specific types of chemicals and residues being removed from the glassware, and follow manufacturer recommendations for safe and effective use.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Gradual temperature changes: Allow glassware to gradually adjust to temperature changes when transitioning from hot to cold environments or vice versa, as rapid fluctuations can cause breakages. - Non-abrasive cleaning tools: Use soft brushes, sponges, or other non-abrasive cleaning implements to remove residue without scratching, chipping, or otherwise damaging glassware surfaces. - Proper storage: Store glassware on designated shelves or racks, ensuring that items are stable, secure, and separate by size and type to prevent accidental collisions, tipping, or breakage. - Emergency response protocols: Establish and regularly review proper procedures for responding to chemical spills, broken glass incidents, or other emergencies to minimise injury risk and facilitate rapid, efficient clean-up efforts.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
