Metal Hydraulic Press | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Metal Hydraulic Press

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -	

RISK MATRIX

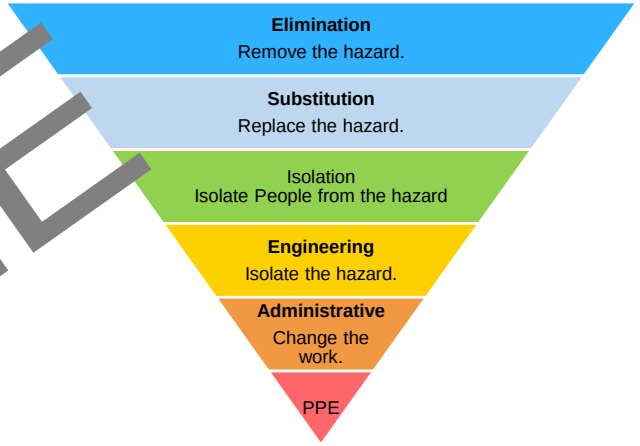
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Poorly trained staff, Incorrect equipment setup	2M	- Provide comprehensive training programs for staff on the proper handling, setup, and operation of hydraulic presses, ensuring all workers are competent before assigning tasks. - Allocate adequate time for workers to attend these training programs and remind them to follow best practices while performing their duties. - Update operational manuals for hydraulic press equipment regularly, making sure they are easily accessible to all staff members for reference. - Establish clear pre-operation checklists that outline necessary steps to ensure safe equipment setup, such as verifying the correct die is installed or inspecting for wear and tear. - Develop a well-documented preventive maintenance schedule for hydraulic presses to minimise unexpected faults. - Implement a tool and authorization system to only allow trained and authorised personnel access to hydraulic press machines. - Use visual aids around equipment, such as posters and signs, to communicate safety guidelines and reinforce proper setup procedures. - Supervisors should frequently monitor work areas, ensuring that employees adhere to safety protocols and address any concerns promptly. - Encourage open communication between staff members for reporting potential hazards, near misses, or suggesting improvements in work processes. - Implement regular safety meetings or toolbox talks to discuss recent incidents, review best practices, and renew the commitment to maintaining a safe workplace. - Provide proper personal protective equipment (PPE) for staff, such as safety goggles, gloves, and steel-toed boots, and emphasise its proper usage when operating hydraulic presses. -Review the efficiency and applicability of control measures periodically to determine if they need updating based on the frequency and severity of accidents or near misses involving hydraulic presses. - Foster a culture of continuous improvement, where everyone understands the importance of health and safety in the workplace and feels empowered to take proactive measures to protect themselves and their co-workers.	1L	
2. Machine inspection	Electrical hazards, Pinch points	2M	- Regular inspection and maintenance: Ensure the hydraulic press undergoes routine inspections and scheduled maintenance by qualified personnel to detect any potential hazards early on. - Lockout/Tagout (LOTO) procedures: Implement lockout/tagout procedures during maintenance or repair activities to isolate the equipment from electrical energy sources, minimising the risk of accidents.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Proper machine guarding: Install appropriate guards around pinch points and other areas where workers may be exposed to hazardous moving parts of the hydraulic press. - Clear signage and labeling: Utilise clear hazard signs and safety labels on the equipment to communicate the presence of electrical hazards and pinch points. - Training for operators: Provide training to all employees operating the hydraulic press, focusing on safe work practices, recognising hazards, and response to emergencies. - Personal Protective Equipment (PPE): Ensure workers wear appropriate PPE, such as safety glasses, gloves, and steel-toed shoes, when working near or with the hydraulic press. - Emergency stop buttons: Install clearly marked emergency-stop buttons accessible from operator stations and other strategic locations to allow immediate shutdown in case of an emergency. - Electrical safety awareness: Train employees on the risks associated with electrical hazards, including shock, arc flash, and fire, emphasising safe work practices when working on or around energised equipment. - Adequate workspace and lighting: Provide a well-organised and sufficiently lit work area around the hydraulic press, enabling workers to identify hazards and minimise the risk of accidents. - Pre-start checks: Require operators to conduct thorough pre-start checks on the hydraulic press, ensuring its proper functioning and identifying any potential hazards before commencing work. - Enhanced communication: Encourage open communication among team members and supervisors regarding any observed hazards or unsafe conditions, promoting a proactive approach to workplace safety. - Incident reporting and investigation: Establish a robust incident reporting system and investigate all incidents promptly to identify root causes and implement preventive measures to avoid recurrence. - Regular audits and risk assessments: Conduct frequent audits and risk assessments of the hydraulic press work environment, focusing on machine inspections, hazard identification, and mitigation strategies. - Safe work procedures documentation: Develop and maintain comprehensive Standard Work Method Statements (SWMS) or Job Safety Analysis (JSA) documents outlining the safe operation and maintenance of hydraulic presses.		
3. Material loading	Manual handling, Falling objects	2M	- Conduct proper manual handling training for all workers involved in material loading to raise awareness and minimise the risk of injuries. - Conduct a pre-shift risk assessment to identify any potential hazards associated with the material loading process, and implement appropriate control measures.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Utilise mechanical lifting aids, such as forklifts, hoists or trolleys, to handle heavy loads and reduce manual handling efforts. - Develop a clear communication system among workers involved in material loading, for example, hand signals, radios or walkie-talkies, so that they can easily communicate and ensure safe operations. - Ensure that all equipment used during the loading process is well-maintained and inspected regularly for defects, wear or damage. - Implement the use of personal protective equipment (PPE), such as gloves, safety footwear and hard hats, to protect workers from potential injuries caused by falling objects or improper handling. - Place weight and size restrictions on individual loads to reduce the risks associated with manual handling and falling objects. - Establish designated loading and unloading zones, complete with signage and barriers, to prevent unauthorised personnel from entering the area and restrict access only to trained workers. - Use load-securing systems, such as straps or chains, to stabilise materials during transportation and prevent unwanted movement or shifting of the load. - Implement a spotter system, assigning at least one worker to observe the material loading process and provide guidance if any issues arise. - Schedule regular breaks and rotate tasks as necessary to avoid worker fatigue, which may lead to accidents or injuries in high-risk activities like material loading. - Establish a reporting system to encourage employees to report any unsafe situations or incidents and follow up on these reports promptly in order to continually improve workplace safety.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
