Mobile Scaffold Erection | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Mobile Scaffold Erection

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person: Phone:		Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, assess risk to communicate those hazards and then to further take steps to either eliminate or control each hazard.	
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.	
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.	
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters	☐ is carried out on or near pressurised gas mains or piping
☐ is carried out on a telecommunication tower	☐ is carried out on or near chemical, fuel or refrigerant lines
☐ involves demolition of an element of a structure that is load-bearing	☐ is carried out on or near energised electrical installations or services
☐ involves demolition of an element related to the physical integrity of structures	☐ is carried out in an area that may have a contaminated or flammable atmosphere
☐ involves, or is likely to involve, disturbing asbestos	☐ involves tilt-up or precast concrete
☐ involves structural alteration or repair that requires temporary support to prevent collapse	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
☐ is carried out in or near a confined space	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant
☐ is carried out in/near a shaft or trench deeper than 1.5 m or tunnel involving use of explosives	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

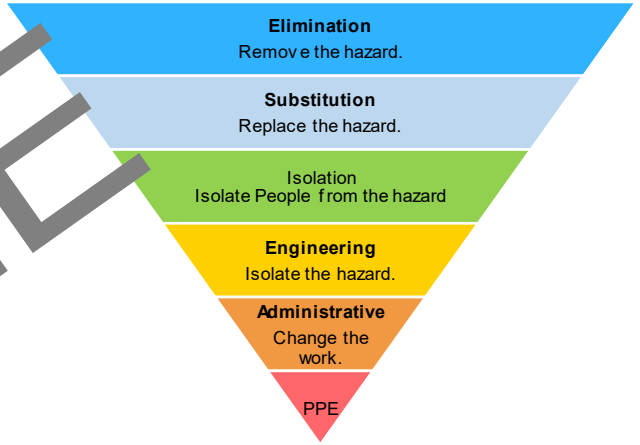
ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEE
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review befo work starts.
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	nitor and ke records

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferr en co lling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the most e tive, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Prote ve quipm) is the least effective method.

HEIRARCHY OF CONTROLS



PERS NAL P TECTIVE EQUIPMENT (PPE)

Select the appropriate PPE abo suitable for the equipment used or the job task being performed (if applicable).

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING TECTION	EY CTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Other PPE Required:

Permit or Licenses Requirements	Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Incorrect assembly, Inadequate Personal Protective Equipment (PPE)	3H	- Ensure all workers involved in the assembly of the mobile scaffold are trained and competent in scaffold erection procedures. - Inspect all scaffold components for damage or defects prior to use; remove any defective parts from service immediately. - Provide clear and detailed instructions or a manufacturer's manual for the correct assembly procedure and ensure it is available on-site. - Conduct a site-specific risk assessment to identify potential hazards, such as uneven ground or overhead power lines, before beginning assembly. - Designate a competent person to supervise and guide the assembly process, ensuring adherence to safety protocols and procedures. - Use only components that are suitable for the specific type of scaffold being erected, ensuring compatibility and compliance with relevant standards. - Equip workers with appropriate personal protective equipment (PPE), such as hard hats, gloves, and non-slip footwear, and ensure they wear it at all times during assembly. - Implement a safe work method statement (SWMS) that outlines step-by-step procedures for the safe assembly of the scaffold. - Set up a designated exclusion zone around the work area to prevent unauthorised access during the assembly process. - Maintain clear communication among team members using hand signals or radios if necessary, particularly when visibility or noise is an issue. - Employ the buddy system to ensure that workers are not assembling the scaffold alone, providing assistance and additional safety oversight. - Prior to assembly, verify that ground conditions are stable and even, making adjustments or using base plates to stabilise the scaffold as needed. - Keep the assembly area tidy and free from tripping hazards, ensuring that tools and components are organised and safely stored when not in use.	2M
2. Mobile Scaffold Erection	Falling from heights, Ill maintained equipment	4A	- Implement training programs to ensure workers are competent and knowledgeable in erecting mobile scaffolds safely. - Inspect all components of the scaffold prior to erection for any signs of damage or wear and ensure all equipment is well-maintained and functional. - Use only qualified personnel to erect, dismantle, and alter mobile scaffolds to minimise the risk of accidents due to improper setup. - Ensure the surface where the scaffold will be erected is stable, level, and capable of supporting the intended load without risk of collapse or imbalance.	3H

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Make use of personal protective equipment such as hard hats, gloves, and safety boots to protect workers from falling objects or other injuries. - Install guardrails and toe boards on the scaffold to provide edge protection and prevent falls from heights. - Use fall arrest systems such as harnesses and lanyards when the work requires being above a certain height where fall risks cannot be completely mitigated. - Limit the number of persons on the scaffold at any time in accordance with its rated capacity to avoid overloading and potential tipping. - Clearly mark and barricade the area surrounding the scaffold to prevent unauthorised access and eliminate the risk of workers inadvertently coming too close or being struck by falling tools or materials. - Regularly monitor weather conditions, as working in adverse weather like high winds or rain can increase risks; postpone work if necessary. - Position the scaffold away from powerlines and electrical hazards to prevent electrocution or arc flash incidents. - Implement an effective communication system among workers to swiftly address issues or risks that might arise during scaffold erection. - Ensure wheels on mobile scaffolds are locked during use and unlocked only when the scaffold needs to be moved to prevent unintended movement which can lead to accidents. - Display clear signage indicating weight limits, dangers, and emergency contact numbers to inform and remind workers of safety protocols.	
3. Inspection	Ineffective safety checks, Lack of training	3H	- Ensure all workers involved in the inspection of the mobile scaffold are adequately trained and hold necessary competencies. - Conduct a thorough visual inspection for any visible defects such as cracks, corrosion, or deformities on the scaffold components before use. - Implement a regular inspection schedule to assess the mobile scaffold's condition before and after each shift. - Use a detailed checklist to ensure all aspects of the mobile scaffold are checked systematically during inspections. - Inspect locking mechanisms to ensure they function correctly and hold the scaffold securely in place. - Verify the stability of the scaffold by checking that wheels or castors are locked and the base is level. - Confirm that guardrails are properly installed and secure to prevent worker falls. - Check that all connections between scaffold sections are tight and secured according to manufacturer instructions. - Review the integrity of platforms to ensure they are free from damage and have no missing components. - Validate that weight loads on the scaffold do not exceed the designated safe working load limits specified by the manufacturer.	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Report and document any deficiencies or hazards identified during inspection immediately to the supervisor. - Do not allow unauthorised personnel to perform inspections or modifications to the scaffold setup. - Ensure adequate lighting is available during inspection times to identify potential hazards effectively. - Reassess the scaffold setup after significant weather events, strong winds, or alterations to site conditions.	
4. Use of Mobile Scaffold	Slip and falls, Collisions with other workers or machinery	4A	[redacted]	3H
5. Dismantling of Scaffold	Fall of materials, Equipment malfunction	3H	[redacted]	2M

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	☒	
All relevant personnel consulted during the development of the SWMS.	☒	
Name, signature, position and date signed of the person approving the SWMS.	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☒	
Provides a step-by-step process of tasks required to carry out the activity or task.	☒	
Adequate risk assessment of any identified hazards has been completed.	☒	
Foreseeable hazards are identified and documented for each step.	☒	
Any hazards listed in any site risk assessments have been added to the SWMS.	☒	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	☒	
Check control measures added to the SWMS are the most effective solutions.	☒	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	☒	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	☒	
SWMS identifies plant and equipment to be used	☒	
Details of inspection checks required for any equipment listed are noted on the SWMS.	☒	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	☒	
Applicable personal protective equipment is selected on the SWMS.	☒	
Reflects and documents any legislative references and/or Australian Standards.	☒	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☒
