Multi-Rip Saw | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Multi-Rip Saw

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).

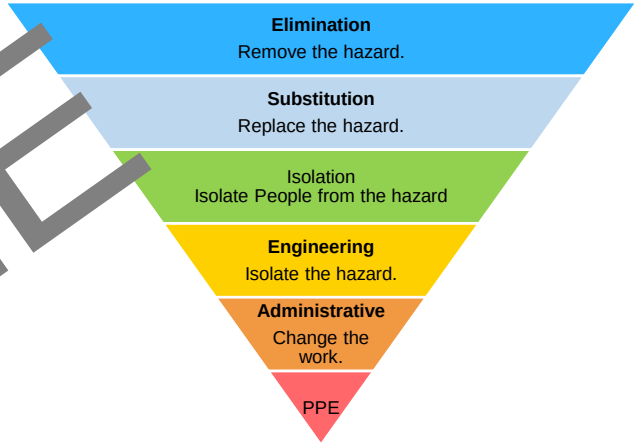
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Poorly maintained equipment, Inadequate training	3H	- Implement a comprehensive inspection and maintenance schedule for the multi-rip saw equipment, ensuring that regular checks are performed to confirm its proper functioning and address any potential issues early on. - Provide thorough training for all employees who will be using the multi-rip saw, which includes both hands-on demonstrations and written procedures. This should cover safe operating practices and identification of potential hazards. - Develop a written standard work procedure for operating the multi-rip saw, with clear, easy-to-follow steps that will minimise the risk of accidents caused by inadequate training or unfamiliarity with the equipment. - Ensure that all employees have proper protective gear, such as safety glasses, gloves, hearing protection, and appropriate clothing, while working with the multi-rip saw. These should be checked regularly for wear and tear to ensure their effectiveness. - Establish a buddy system whereby beginner operators are paired with more experienced operators. This way, less-experienced employees can receive ongoing guidance and support as they develop their proficiency in using the multi-rip saw, reducing the risk of errors caused by inadequate training. - Schedule regular safety meetings and toolbox talks addressing the use and maintenance of the multi-rip saw, emphasising the potential hazards and strategies for implementation for preventing accidents. - Designate a competent person to supervise the multi-rip saw operations, with experience in identifying and mitigating risks associated with the equipment's use. - Maintain a clean and organised work area, ensuring all tools and accessories are properly stored when not in use. This helps to prevent accidents caused by improperly maintained or misplaced equipment. - Install safety guards and emergency stop switches on the multi-rip saw, allowing quick deactivation of the machine in case of emergencies or malfunctions. - Enforce a policy of regular breaks for operators, providing an opportunity for them to rest and stay focused on safe work practices. Fatigue can lead to poor judgement and increased hazards, so a well-rested and focused workforce is key to safely operating the multi-rip saw.	2M	
2. Timber inspection	Manual handling injuries, Exposed to wood dust	2M	- Provide appropriate manual handling training for workers to ensure they are aware of correct lifting and carrying techniques, reducing the risk of injuries. - Implement a robust timber inspection process and workflow that minimises the need for manual handling and reduces overall physical strain on workers. - Ensure workers wear appropriate personal protective equipment (PPE), such as gloves and safety footwear, during the inspection process to prevent potential injuries.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Establish designated areas for inspection and material storage, keeping workspaces clear and uncluttered to minimise tripping hazards. - Encourage workers to take regular breaks and rotate tasks in order to avoid excessive repetitive movements that could lead to muscle strain. - Utilise mechanical aids, such as trolleys or forklifts, wherever possible to move heavy or large-scale loads instead of manual handling methods. - Ensure proper ventilation and dust extraction systems are in place to prevent the buildup of wood dust in the workplace, reducing the chances of respiratory issues. - Regularly maintain and inspect dust extraction systems to make sure they function correctly and minimise the risk of dust exposure to workers. - Provide appropriate PPE, such as dust masks or respirators, for workers to wear during the inspection process when exposed to wood dust. - Train workers to recognise early signs of manual handling injuries, such as muscle strain or back pain, enabling them to seek intervention and prevention measures as needed. - Implement a reporting system for workers to inform supervisors if they identify any hazards or have concerns about their work environment, ensuring that risks are addressed. - Conduct regular risk assessments of the workplace and review control measures frequently to ensure they remain effective and up-to-date based on current industry best practices. - Foster a culture of safety at the workplace by promoting open communication and teamwork around health and safety matters, encouraging workers to share concerns or ideas for improvement when it comes to working with timber and controlling potential hazards.		
3. Machine setup	Unsecured moving parts, Electrical hazards	3H	- Regularly inspect and maintain the Multi-Rip Saw: Ensure the machine is in proper working condition, with all safety features (such as safety guards) securely in place and functioning correctly to minimise the risk of unsecured moving parts and electrical hazards. - Lockout/Tagout procedures: Implement lockout/tagout procedures for all equipment during maintenance and set up, to prevent accidental activation of moving parts or exposure to electrical hazards. - Proper training: Provide thorough and regular training for workers on the safe operation and potential hazards associated with the Multi-Rip Saw, including how to avoid injury from unsecured moving parts and electrical hazards. - Clear signage: Post clear warning signs around the Multi-Rip Saw work area to remind employees of hazards and necessary precautions.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Personal Protective Equipment (PPE): Require employees to wear appropriate PPE, such as safety glasses, ear protection, and gloves, to reduce the potential risk of injury from unsecured moving parts and electrical hazards. - Emergency stop button: Ensure that the emergency stop button is easily accessible and functional to immediately halt the machine if an unsafe situation arises. - Safe work practices: Encourage workers to follow established operating procedures, report any malfunctions or unsafe conditions, and adhere to safe work methods when using the Multi-Rip Saw. - Housekeeping: Maintain a clean and organised workspace around the Multi-Rip Saw, eliminating clutter and debris that can pose tripping or slipping hazards, which could result in contact with unsecured moving parts or electrical components. - Electrical safety checks: Perform periodic electrical safety checks on the Multi-Rip Saw, including inspection of cords, plugs, and connections for fraying or other damage to reduce the risk of electrical hazards. - Correct use of tools: Ensure employees are using the correct tools for adjustments and installation tasks to prevent incidents resulting from improper tool usage around the Multi-Rip Saw. - Communication and teamwork: Encourage open communication among team members, emphasising the importance of reporting hazards or unsafe conditions to supervisors and cooperating in implementing safety measures in the work area.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us[illegible].	☐	☐	
Details of inspection checks required for any equipment listed ar[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
