Paints And Coatings Solvent-Based | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Paints And Coatings Solvent-Based

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

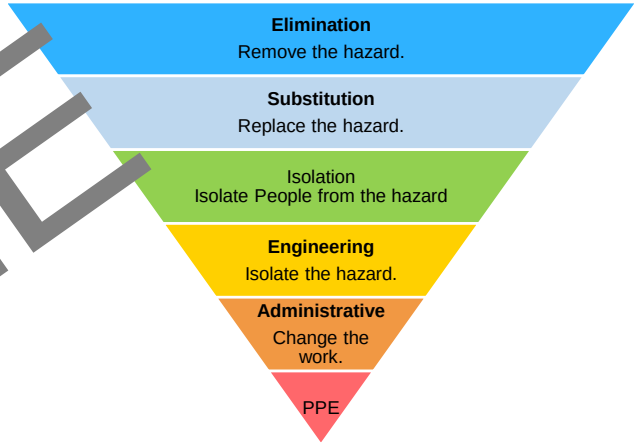
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Inhalation of toxic fumes, fire risk from spilled solvents	3H	- Proper ventilation: Ensure the work area is well-ventilated to prevent the accumulation of toxic fumes from paints and solvents. Utilise fans, vents, or open windows to improve air circulation. - Appropriate storage: Store flammable solvents in approved fire-resistant cabinets or containers, away from ignition sources and heat. - Personal Protective Equipment (PPE): Provide and require workers to wear appropriate PPE such as respirators, goggles, gloves, and long-sleeved shirts when handling paint and solvent materials. - Maintain good housekeeping practices: Keep work areas tidy and free of debris, obstacles, and spills. Clean up any solvent spills immediately using absorbent material and dispose of safely. - Training: Conduct regular training sessions for employees on proper handling and storage of paints and solvents, as well as emergency procedures in case of spills or fires. - Material Safety Data Sheets (MSDS): Provide MSDS for all paints and solvents being used, ensuring workers understand the potential hazards and necessary precautions for each product. - Fire prevention measures: Install working smoke detectors, fire extinguishers, and emergency exits in the workplace. Train staff on how to use firefighting equipment and execute evacuation plans in case of a fire. - No smoking policy: Enforce a strict no-smoking policy around paint and solvent storage areas, as well as during the preparation and application of coatings. - Closed container policy: Instruct workers to always keep solvent containers closed when not in use to minimise evaporation and reduce the risk of fire. - Spill containment plan: Develop and implement a spill containment plan that outlines the steps to be taken in case of accidental spills, including immediate actions, reporting, and clean-up procedures. - Regular safety assessment: Conduct periodic checks on PPE, safety equipment, and work processes to ensure effective hazard control measures are in place and functioning properly. Review and update the Safe Work Method Statement (SWMS) as needed to reflect any changes in the work environment or procedures.	2M	
2. Surface cleaning	Chemical burns, eye irritation	3H	- Provide proper personal protective equipment (PPE) including chemical-resistant gloves, safety goggles, and a face shield for workers who will be handling solvent-based cleaning materials. - Train employees on proper handling, storage, and disposal of solvents to minimise the risk of spills, splashes, or accidental exposure that could lead to chemical burns or eye irritation.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Ensure adequate ventilation in the workspace by either using mechanical means (such as local exhaust ventilation) and/or opening windows and doors to allow fresh air circulation, reducing the concentration of hazardous vapors. - Store all solvent-based cleaning materials in clearly labelled, sealed containers when not in use, preventing accidental skin contact and minimising the release of harmful vapors. - Implement a job rotation schedule to limit individual worker exposure to solvents and decrease the risks associated with prolonged contact. - Follow manufacturer-recommended instructions for diluting solvents, this ensures they are used safely and effectively while minimising potential hazards. - Use a chemical spill kit and have it readily available in case of an accidental spill or splash, allowing for prompt cleanup and minimising the risk of injury. - Encourage workers to regularly inspect their PPE for any signs of wear, tear, or degradation, ensuring the equipment remains effective in protecting them from potential hazards. - Establish designated eating and drinking areas separate from the work area, reducing the likelihood of cross-contamination from chemicals. - Create and maintain an up-to-date Safety Data Sheet (SDS) library accessible to workers at all times, providing vital information about the hazardous materials being used and appropriate response measures. - Conduct regular toolbox talks and refreshers on proper handling and storage of solvent-based paints and coatings, reinforcing the importance of workplace health and safety. - Encourage workers to report any health concerns or symptoms potentially related to exposure to solvent-based cleaning materials, allowing for timely intervention and necessary adjustments to control measures.		
3. Sanding	Dust inhalation, hearing damage from loud equipment	2M	- Proper ventilation: Ensure that the work area has adequate ventilation to reduce the concentration of dust particles in the air during the sanding process. - Dust extraction system: Use a high-quality dust extraction system, preferably with HEPA filters, to collect and remove dust generated from the sanding process. - Personal protective equipment (PPE): Provide workers with appropriate PPE, including dust masks or respirators, safety goggles, and earplugs or earmuffs for noise protection. - Training: Train workers in proper sanding techniques, use of equipment, and relevant safety precautions to minimise hazards associated with dust inhalation and hearing damage. - Tool maintenance: Regularly inspect and maintain sanding tools and equipment to ensure optimal performance and reduced noise levels.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Job rotation: Rotate workers between different tasks, limiting their exposure to both dust and loud noises. - Work breaks: Implement regular breaks during the sanding process, allowing workers' bodies to recover from potential exposure hazards. - Wet sanding methods: Whenever possible, utilise wet sanding methods to minimise the amount of airborne dust particles. - Noise-reducing tools: Invest in low-noise sanding tools and equipment to help decrease the risk of hearing damage. - Signage: Post clear warning signs in the work area indicating the risks of dust inhalation and noise hazards as well as required PPE. - Ongoing monitoring: Continuously monitor the work environment for dust and noise levels, adjusting control measures as necessary to maintain a safe work environment.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐
