Power Drill | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Power Drill

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -	

RISK MATRIX

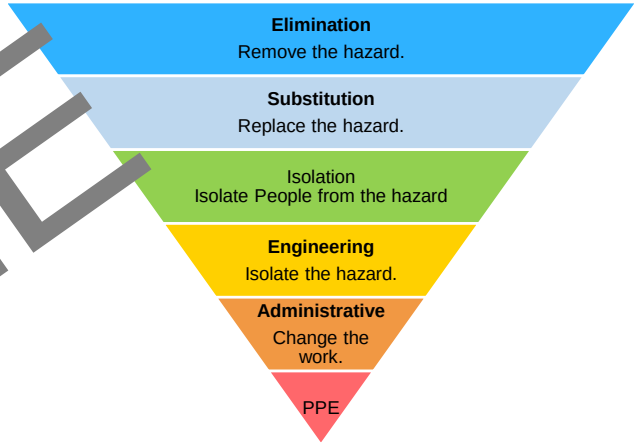
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Electric shock, Slips and trips	3H	- Inspect the power drill for any visible damage or defects before use, and ensure that all moving parts are functioning properly. - Conduct a risk assessment of the work area to identify potential hazards such as wet floors or obstructed walkways, and address them accordingly. - Place warning signs or barriers around the work area to alert others to the potential risks and prevent unauthorised access. - Regularly check and maintain electrical cords and plugs for any damages or wear, ensuring they are not frayed, cracked, or exposed. - Use a portable Residual Current Device (RCD) or plug the power drill into an RCD-protected circuit to minimise the risk of electric shock. - Ensure proper footwear with non-slip soles is worn by workers to reduce the likelihood of slips and trips. - Keep the work area clean and free from debris, loose cables, or tools that may pose a tripping hazard. - Properly organise and store materials and equipment when not in use to prevent cluttering the work area and reducing the risk of accidents. - Ensure adequate lighting is available to illuminate the work area and avoid poor visibility, which can increase the risk of accidents. - Provide additional training, tool talks, or orientations for workers to enable them to understand the potential hazards and control measures associated with using a power drill in a safe manner. - Implement a permit-to-work system or other formal authorization process to ensure that only trained and authorised personnel operate power drills in the workplace.	2M	
2. Inspection	Faulty equipment, Poor visibility	2M	- Regular inspection and maintenance: Conduct routine inspections of power drills to ensure they are functioning correctly and address any issues identified during the inspections, including loose parts, wear and tear, or any other damage. - Proper illumination: Ensure adequate lighting is provided in the work area, enabling workers to see clearly while operating power drills. This can help avoid accidental injuries due to poor visibility. - Pre-use checks: Perform thorough checks on the power drill before each use, assessing for signs of damage, frayed cords, or faulty parts. - Reporting malfunctions: Encourage workers to promptly report any issues they may encounter with power drills so necessary repairs or replacements can be conducted immediately. - Appropriate safety gear: Require workers to wear proper personal protective equipment (PPE) such as safety goggles, gloves, and ear protection while operating power drills, ensuring they are protected against potential hazards.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Training and education: Provide workers with comprehensive training on the use and handling of power drills, emphasising safe work practices and injury prevention measures. - Well-organised workspace: Maintain a clean and tidy work environment, free of obstructions and tripping hazards. Ensure power cords are neatly secured to prevent entanglement or tripping incidents. - Clear signage: Place warning signs in areas where power drills are being used, informing others of potential hazards and indicating the need for caution. - Timely replacement: Replace outdated or continuously malfunctioning equipment with new, updated models to ensure the continued safety and efficiency of power drill usage in the workplace. - Weather considerations: In outdoor settings or worksites prone to weather changes, take appropriate precautions against moisture or condensation, as these elements can cause electrical hazards when using power drills. - Emergency response and first aid: Have a well-stocked first aid kit readily accessible in the working area, and ensure all employees have adequate knowledge and training on emergency response procedures in the event of an accident involving power drills.		
3. Setup	Falling objects, Incorrect equipment usage	3H	- Ensure a designated safety zone is established around the work area to protect workers and bystanders from potential falling objects. - Installation of safety nets or catch platforms, where necessary, to prevent any falling objects from hitting workers or equipment below. - Provide all workers with appropriate PPE such as hard hats and safety glasses to protect them from falling objects and any debris generated from the drilling process. - Inspect and maintain all equipment, including power drills, prior to use to make sure they are functioning correctly and are safe for operation. - Provide all workers with proper training on the correct usage of power drills and related equipment, focusing on safe handling and proper adjustment of settings. - Implement a regular inspection routine to ensure that all necessary safety measures have been properly adhered to during the setup phase. - Ensure proper communication between team members during the setup, working, and dismantling phases of the project to minimise risks associated with incorrect equipment usage. - Use signage and barriers to restrict access to designated work areas only to authorised personnel who are trained in the operation of power drills and other equipment required for the task. - Develop a clear plan detailing the sequence of work to be carried out during the setup phase, along with roles and responsibilities for each team member.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Make certain that all workers are fully aware of emergency procedures and evacuation plans in case an incident occurs during the setup or drilling process. - Conduct regular toolbox talks to reinforce safety awareness and promote open communication among team members about potential hazards and controls. - Incorporate drills with torque control, overload protection, and cut-out features to reduce the likelihood of uncontrolled tool movements and other potentially dangerous situations. - Position adequate lighting within the workspace to ensure there is sufficient visibility for the proper and safe operation of the equipment. - Maintain a clean work environment by regularly removing any unnecessary materials or obstacles which could contribute to slips, trips, and falls.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
