Profile Polisher Bridge Type | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Profile Polisher Bridge Type

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

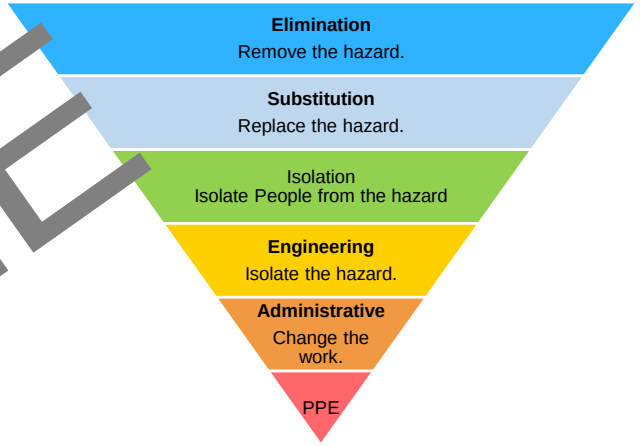
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Incorrect equipment setup, electrical hazards	2M	- Proper training and instruction: Ensure all workers operating the profile polisher bridge type have received adequate training and supervision to safely set up and operate the equipment. - Equipment inspection and maintenance: Regularly inspect the profile polisher bridge type for any signs of wear, damage, or malfunction and perform preventative maintenance as required. - Clear workspace layout: Ensure the work area surrounding the equipment is clean, well-lit, and free of debris or obstacles to avoid accidents during setup and operation. - Appropriate personal protective equipment (PPE): Require the use of safety gear, such as safety glasses, gloves, and hearing protection, for workers involved in setting up and operating the equipment. - Electrical safety measures: Make sure all electrical connections are properly secured and insulated, and use an appropriate circuit breaker for overcurrent protection to minimize the risk of electrical hazards. - Equipment grounding: Verify that the equipment is grounded properly to prevent the occurrence of electrical faults. - Safe lifting practices: Implement proper lifting techniques, such as using mechanical aids or seeking assistance from colleagues, when handling heavy components during equipment setup. - Equipment manufacturer guidelines: Adhere to the manufacturer's recommendations and specifications for assembling, installing, and configuring the profile polisher bridge type. - Emergency stop functionality: Test and confirm the effectiveness of the emergency stop function on the equipment before commencing work, to ensure immediate shutdown in case of an emergency. - Lockout/tagout procedures: Establish lockout/tagout procedures for electrical panels and disconnect switches to safeguard against unforeseen activation of the equipment during setup. - Pre-operation verification: Double-check that all components have been assembled and installed correctly before turning on the power and operating the machinery, addressing any issues or discrepancies immediately.	1L	
2. Inspecting materials	Sharp edges, heavy lifting injuries	2M	- Conduct a thorough inspection of materials upon delivery, ensuring there are no visible defects, deformations, or sharp edges. - Use appropriate personal protective equipment (PPE), including gloves, safety boots with steel toe-caps, and safety glasses, to protect against cuts, scrapes, and heavy lifting injuries. - Implement proper handling techniques and lifting methods, such as bending at the knees and keeping the back straight, to reduce the risk of strains and other musculoskeletal injuries.	1L

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Utilise mechanical aids like trolleys, hoists, and forklifts for moving extremely heavy materials, to reduce the risks associated with manual lifting and handling. - Inspect and maintain all material handling equipment regularly, ensuring they are in good working order and safe for use. - Provide sufficient training to all workers involved in the handling of materials, emphasising the importance of inspecting materials and identifying hazards before commencing work. - Develop and enforce a safe system of work that includes procedures for reporting any concerns about the condition of materials, along with an effective response plan for addressing issues. - Implement clear communication channels among all team members, allowing for timely reporting of any hazards or unsafe conditions related to materials. - Establish designated areas for storing materials, ensuring they are kept securely and stored away from potential harm to workers and passersby. - Promote a safety-first culture throughout the workplace by encouraging open discussions on hazard identification, fostering accountability, and practicing continuous improvement. - Conduct regular audits and safety inspections to identify any gaps or deficiencies in existing control measures, taking appropriate corrective actions to address these shortcomings. - Review the established Safe Work Method Statement (SWMS) periodically or whenever there are changes in the work environment or processes, ensuring the control measures remain relevant and effective in mitigating hazards associated with inspecting materials.		
3. Power up machine	Electrical shocks, unexpected startup	3H	- Regular equipment inspection: Conduct routine checks of the Profile Polisher Bridge Type machine for any signs of wear or damage, particularly focusing on electrical components and connections to reduce the risk of electrical shocks. - Lockout/tagout procedures: Implement lockout/tagout protocols to ensure the machine is properly shut down and de-energised during maintenance or repair works, eliminating the risk of unexpected startup. - Use of appropriate Personal Protective Equipment (PPE): Provide and enforce the use of suitable PPE, such as insulated gloves and safety boots, to protect workers from potential electrical shocks. - Ground Fault Circuit Interrupter (GFCI) usage: Employ GFCIs on all power sources used by the machine to minimise the risk of electrical shock incidents. - Proper training and certifications: Ensure that only trained and certified operators handle the machine, reducing the risk of mishaps caused by inexperienced operators.	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Clear workspace: Maintain a clutter-free environment around the machine to prevent tripping hazards, which could lead to accidental contact with electrical components. - Emergency shutdown procedures: Have a well-defined emergency shutdown procedure in place, allowing for the quick de-energization of the machine in case of any issues. - Warning signs and labels: Display warning signs and labels near the machine to remind operators of potential hazards and encourage adherence to safety protocols. - Pre-start safety checks: Before powering up the machine, ensure all safety measures are in place, such as proper PPE usage and an unobstructed workspace. - Routine maintenance: Follow the manufacturer's guidelines for regular maintenance of the machine, addressing any discovered issues promptly to minimise the risk of electrical shocks and unexpected startups. - Secure power cords and connections: Make sure all power cords and connections are securely fastened, free from damage, and not subject to pressure or tension to avoid electrical shock. - Supervision: Provide a designated supervisor or team leader to oversee operations and ensure workers are following established safety procedures. - Incident reporting: Encourage employees to report any near misses, accidents, or safety issues involving the machine immediately to prevent escalation of hazardous situations. - Continual safety improvement: Regularly review safety protocols and implement improvements based on feedback from operators and previous incidents.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
