

Pruning Operations Near Public Paths Or Roads | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Pruning Operations Near Public Paths Or Roads

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person:	Phone:	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:	Title:	Date:
------------	--------	-------

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:
------------	--------	--------

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT

<input type="checkbox"/> involves a risk of a person falling more than 2 meters	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping
<input type="checkbox"/> is carried out on a telecommunication tower	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing	<input type="checkbox"/> is carried out on or near energised electrical installations or services
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos	<input type="checkbox"/> involves tilt-up or precast concrete
<input type="checkbox"/> involves structural alteration or repair that requires temporary support to prevent collapse	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
<input type="checkbox"/> is carried out in or near a confined space	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 2m or tunnel involving use of explosives	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work.
Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.								PPE

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Poor site conditions, Unsecured equipment	3H	<ul style="list-style-type: none"> - Conduct a site inspection to identify and assess any uneven surfaces, trip hazards, or obstructions that could affect footing and equipment setup. - Erect safety barriers or signs around the work zone to keep bystanders at a safe distance from operations and prevent access into the work area. - Secure all tools and pruning equipment in designated storage areas when not in use to prevent accidental falls or trips. - Ensure workers are wearing appropriate personal protective equipment (PPE), including high-visibility clothing, to increase visibility near public paths or roads. - Implement weather monitoring protocols and postpone work during inclement conditions that could contribute to unsafe site conditions. - Train workers on safe handling practices for all equipment and ensure they are familiar with operating manuals and emergency procedures. - Use proper tie-down methods to secure equipment when transporting it to and from the site, preventing movement that could lead to unsecured loads. - Establish and communicate clear pedestrian and traffic management plans, ensuring workers know the designated pathways and zones. - Regularly check all pruning equipment for maintenance needs or defects before each use to ensure reliability and safety during operation. - Provide adequate lighting in work areas during low-light conditions to enhance visibility and reduce the risk of accidents due to poor site conditions. - Designate a spotter to guide equipment operations as necessary, especially when working near roadways or areas with limited visibility. 	2M
2. Site Inspection	Tripping hazards, Passing traffic	3H	<ul style="list-style-type: none"> - Conduct a thorough visual inspection of the site to identify potential tripping hazards such as rocks, branches, or uneven surfaces. - Clearly mark and flag identified tripping hazards with bright, visible tape or cones. - Schedule work during times of low pedestrian and vehicle traffic to minimise risk. - Use appropriate signage to warn pedestrians and drivers of pruning operations ahead. - Designate a spotter or traffic controller to manage pedestrian and vehicle flows near the work site. - Implement temporary barriers or fencing to keep pedestrians at a safe distance from the work area. - Ensure that all workers wear high-visibility clothing to improve their visibility to passing traffic. - Provide adequate lighting if work must be conducted in low-light conditions to enhance visibility of hazards. 	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			<ul style="list-style-type: none"> - Brief the crew on specific tripping hazards and traffic risks identified during the inspection before commencing work. - Utilise personal protective equipment (PPE) such as non-slip footwear to reduce the risk of trips and falls. - Keep work areas tidy and organised to prevent creating additional tripping hazards during operations. - Liaise with local authorities if necessary to arrange for temporary road closures or traffic diversions. 	
3. Tree Assessment	Falling branches, wildlife encounters	3H	<ul style="list-style-type: none"> - Conduct a thorough visual inspection of the tree from all angles to identify any dead or weak branches that might pose a risk. - Use binoculars to inspect higher branches for signs of disease or damage not visible from the ground. - Implement a buffer zone around the tree where pruning will occur to keep unauthorised person out and minimise the risk of injury from falling branches. - Schedule a time for pruning when pedestrian traffic is minimal, such as early morning, to reduce the risk of accidents with public paths or roads. - Clearly mark and secure the work area with high-visibility tape and appropriate signage warning of potential hazards and ongoing operations. - Use experienced climbers or machinery operators who are trained in safe pruning techniques and understand how to manage risks associated with high work. - Deploy additional safety spotters on site to monitor wildlife activity and notify the team about any potential encounters or hazards. - Don protective headgear, gloves, and eye protection to protect from falling debris and minor wildlife interactions such as insects or birds. - Use only well-maintained, appropriate tools that are specifically designed for pruning tasks, ensuring they are sharp and free of defects to reduce the risk of mishandling and accidents. - Be prepared for wildlife contingencies by having an animal capture or relocation expert on standby if hazardous wildlife is identified. - Maintain open communications among the crew through radios or other reliable devices to quickly address any changes or unexpected hazards during the operation. - Ensure all workers are aware of emergency procedures, including escape routes and first-aid locations, should an incident arise. - Regularly review and update the Safe Work Method Statement to reflect lessons learned from previous operations and include any emerging hazards or improved control measures. 	1L

1. **Introduction**
 This report provides an overview of the project's objectives, scope, and the methodology used for data collection and analysis. The primary goal is to assess the impact of the intervention on the target population.

2. **Methodology**
 The study employed a mixed-methods approach, combining quantitative surveys with qualitative interviews. Data was collected from a sample of 100 participants, with 50 in the control group and 50 in the intervention group.

3. **Results**
 The quantitative data shows a significant increase in the intervention group's scores compared to the control group. The qualitative data provides insights into the challenges faced by participants and the effectiveness of the intervention.

4. **Conclusion**
 The findings suggest that the intervention has a positive impact on the target population. Further research is needed to explore the long-term effects and to refine the intervention for better outcomes.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review must be carried out in consultation with workers (including contractors and sub-contractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	<input checked="" type="checkbox"/>	
All relevant personnel consulted during the development of the SWMS.	<input checked="" type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input checked="" type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input checked="" type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input checked="" type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input checked="" type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input checked="" type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	<input checked="" type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input checked="" type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input checked="" type="checkbox"/>	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input checked="" type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input checked="" type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input checked="" type="checkbox"/>	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	<input checked="" type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input checked="" type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input checked="" type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input checked="" type="checkbox"/>
