Radio Frequency and High Frequency Welder | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Radio Frequency and High Frequency Welder

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

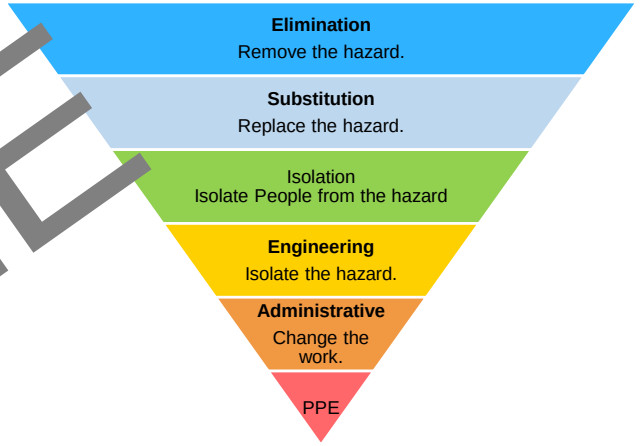
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Electrical hazards, Unsafe work environment	2M	- Regular inspection and maintenance of electrical equipment: To minimise the risk of electrical hazards, ensure that all electrical equipment used for radio frequency (RF) and high frequency (HF) welding is inspected and maintained regularly by a qualified electrician. - Proper grounding and circuit protection: Ensure that all electrical connections and equipment are properly grounded and have appropriate circuit protection in place to prevent electrical shock or overload. - Use of insulated tools and protective gear: Workers should always use insulated tools while working with RF and HF welding equipment, as well as wear appropriate personal protective equipment (PPE), including gloves, safety glasses, and ear protection. - Removal of combustible materials: Clear the work area of any flammable or combustible materials to minimise the risk of fire hazards during welding operations. - Adequate ventilation and air filtration: Ensure proper ventilation and air filtration is in place to remove harmful fumes and particles generated during RF and HF welding processes, preventing respiratory problems and maintaining good air quality. - Installation of safety barriers: Erect appropriate safety barriers around the work area to protect workers from exposure to RF and HF radiation and prevent unauthorised access. - Emergency shut-off controls: Equip all RF and HF welding equipment with clearly marked emergency shut-off controls, allowing for immediate disconnection in case of an emergency situation. - Comprehensive employee training: Provide regular training and refresher courses to workers on safe handling of RF and HF welding equipment, emphasising the importance of following hazard control measures and work procedures correctly. - Clutter-free work environment: Maintain a well-organised and clutter-free workspace to reduce the risk of trip and fall hazards, ensuring that all necessary materials and tools are readily accessible. - Regular monitoring and assessment: Continually review and evaluate the effectiveness of implemented hazard control measures, making adjustments as needed to optimise workplace safety. - Implement lockout/tagout procedures: When performing maintenance or repairs on RF and HF welding equipment, use lockout/tagout procedures to ensure that any energy sources are properly isolated before work begins, preventing accidental energization.	1L	
2. Machine setup	Pinch points, Equipment malfunction	3H	- Conduct a thorough risk assessment before beginning the setup process, identifying potential pinch points and equipment malfunction hazards. - Ensure that all operators have completed appropriate training for the safe operation of the Radio Frequency (RF) & High Frequency (HF) welding machines.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Verify that Personal Protective Equipment (PPE) is being used correctly, including gloves to protect hands from pinch points, eye protection, and appropriate footwear. - Regularly inspect and maintain the RF & HF welding machine to avoid equipment malfunction, including following manufacturer's guidelines for servicing and repairs. - Establish a routine pre-operational inspection process to check the condition of cables, connections, and components before using the machine. - Implement proper Lockout/Tagout procedures when working on or near the equipment, strictly prohibiting untrained individuals from altering any settings or components. - When setting up the machine, keep hands and fingers away from moving parts and potential pinch points, using appropriate tools if necessary. - Utilise signage, barriers, or other physical measures to indicate the presence of potential hazards during machine setup and alert nearby personnel to these risks. - Develop and enforce standard operating procedures (SOPs) for machine setup, ensuring all operators are familiar with the step-by-step process, including hazard control measures. - Incorporate safety features or devices, such as emergency stop buttons and guarding systems, to minimise the risk of incidents and injuries associated with pinch points and equipment malfunction. - Assign a designated safety officer to oversee the machine setup process and ensure adherence to established safety protocols and control measures. - Encourage open communication among team members, creating an environment where staff can report unsafe work practices or conditions without fear of retribution. - Review and revise control measures periodically based on incident reports, near-miss scenarios, and worker feedback, keeping the SWMS updated and reflective of current best practices in workplace health and safety. - Regularly conduct refresher training for operators, focusing on the identification of hazards and the implementation of appropriate control measures for machine setup in the RF & HF welding environment.		
3. Material loading	Manual handling, Falling objects	2M	- Ensure proper training and induction for all workers involved in the radio frequency and high-frequency welding processes, focusing on the correct manual handling techniques and safety procedures. - Implement a well-organised workspace design, allowing sufficient space for material movement, loading, and storage to minimise the risk of falling objects and manual handling injuries. - Provide suitable lifting equipment such as forklifts, hoists, or trolleys to assist with material loading and unloading, minimising the need for excessive manual handling.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Schedule regular inspection and maintenance of all lifting equipment used for material loading to ensure they are in good working condition and free from defects that could lead to accidents. - Enforce a buddy system or team lifting approach for heavy or awkwardly-shaped materials to reduce the risk of strains and sprains associated with manual handling tasks. - Implement clear housekeeping practices around the loading area, including proper labeling and storage of materials, to prevent any potential falling object hazards. - Encourage workers to wear the appropriate personal protective equipment (PPE) when conducting material loading activities, such as gloves, safety boots, and hard hats, to protect against potential hazards. - Establish an effective communication system between workers and supervisors, enabling them to report unsafe work conditions or incidents immediately. - Develop and implement emergency response procedures for the event of accidents or incidents involving falling objects or injuries sustained from manual handling activities. - Conduct toolbox talks or pre-start meetings for workers involved in the material handling process to discuss potential hazards, safety precautions, and other relevant information. - Utilise pallets, shelves, or racks for storing materials to ensure they are stored securely and not placed at height where they may be prone to falling. - Incorporate visual aids, such as warning signs or floor markings, in the loading area to indicate restricted zones or areas where extra caution must be taken due to the presence of falling object hazards. - Regularly review and update the Safe Work Method Statement (SWMS) for radio frequency and high-frequency welders, with a specific focus on material loading and associated hazards to identify any necessary changes or improvements in safety measures.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
