

Refuelling Of Plant | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Refuelling Of Plant

Business Name: [Company Name]

ABN: [ABN]

SWMS#

Business Address: [Company Address]

Contact Person:

Phone: [Phone]

Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

NAME

SIGNATURE

DATE

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work. PPE

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip and fall, incorrect PPE use	2M	<ul style="list-style-type: none"> - Clearly mark and maintain designated refuelling areas to minimise trip hazards, ensuring the surface is level and free of obstacles. - Provide adequate lighting in the refuelling area to ensure visibility and reduce the risk of trip and fall incidents. - Implement regular inspection and maintenance routines for hoses, nozzles, and other refuelling equipment to prevent leaks and issues that can contribute to slip hazards. - Train personnel in proper refuelling procedures, emphasising the importance of accurate PPE use and hazard awareness. - Ensure that workers involved in the refuelling process wear appropriate PPE, including gloves, safety glasses, and steel-toe boots, as required by the specific workplace environment. - Display signage around the refuelling area to remind workers of the correct PPE requirements and safe refuelling practices. - Utilise a buddy system or spotter during refuelling to help monitor the process, identify potential hazards and offer assistance if needed. - Keep an adequately stocked spill kit near the refuelling area, ensuring that workers are trained in its usage to effectively respond to any spillages or accidents. - Develop and enforce a housekeeping policy that focuses on regular cleaning and removal of debris from the refuelling area to minimise trip hazards. - Create clear pathways and uncluttered walking surfaces within and around the refuelling area for easy access and egress. - Provide non-slip matting or other suitable solutions in areas where slips, trips, and falls are more likely to occur, such as near the fuel storage tanks or within vehicle service bays. - Conduct regular safety audits and assessments of the refuelling area to identify new hazards, ensuring that control measures are up-to-date and effective in mitigating risks associated with refuelling operations. 	1L	
2. Assess Area	Uneven ground, obstructed pathways	3H	<ul style="list-style-type: none"> - Conduct a thorough inspection of the refuelling area to identify any uneven ground, obstructed pathways, and other related hazards that may pose a risk during the refuelling process. - Clearly mark any uneven surfaces or obstructions in the path with appropriate warning signs or barriers to communicate potential risks to all workers involved in the refuelling process. - Prioritise the maintenance and repair of severely uneven or damaged ground surfaces to reduce the likelihood of accidents or equipment damage. 	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Implement appropriate traffic management measures such as one-way systems, speed limits, and pedestrian exclusion zones to minimise the interaction between personnel and vehicles in and around the refuelling area. - Ensure proper lighting is installed and maintained in the area, so workers can clearly see and navigate around any hazards while performing the task. - Only use plant equipment that is designed to handle the hazards present in the refuelling area, ensuring it has the necessary features like stability controls and robust tyres. - Equip vehicles and mobile equipment with suitable reversing alarms or sensors, and audible or visual warning devices to notify nearby workers of their presence, especially when navigating challenging areas. - Provide workers with the necessary personal protective equipment, such as non-slip boots to prevent slips, trips, and falls due to uneven ground or obstructions. - Train workers participating in the refuelling process on how to effectively identify, assess, and mitigate any potential hazards they may encounter. - Establish regular channels of communication between workers and supervisors for reporting hazards in the refuelling area, fostering a culture of safety awareness and proactive risk management. - Continuously evaluate and review the effectiveness of implemented control measures to ensure they are adequately mitigating the risks associated with uneven ground and obstructed pathways during the refuelling process. Make necessary adjustments as needed to maintain a safe work environment. 		
3. Select Fueling Equipment	Poor maintenance of equipment, equipment malfunction	3H	<ul style="list-style-type: none"> - Regular Inspection and Maintenance: Conduct routine inspections and maintenance of fueling equipment to ensure it is in proper working condition and prevent any malfunctions. - Equipment Training: Provide comprehensive training for all personnel involved in the refuelling process on the correct use and handling of fueling equipment to minimise human error. - Manufacturer Guidelines: Follow the manufacturer's guidelines and recommendations for selecting, operating, and maintaining fueling equipment. - Use Certified Equipment: Ensure that only certified and approved fueling equipment is used, meeting the required industry standards and regulatory requirements. - Clear Signage: Clearly label and identify fueling equipment, including emergency shut-off devices, to promote proper use and easy access during emergencies. - Emergency Response Plan: Develop a site-specific emergency response plan detailing procedures to follow in case of accidental spills or equipment malfunction during the refuelling process. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Incident Reporting: Establish a streamlined incident reporting system that encourages employees to report any equipment-related issues promptly, facilitating swift action and potential hazard mitigation. - Protective Gear: Provide personal protective equipment (PPE) such as gloves, goggles, and safety boots for all staff members involved in the refuelling process to minimise the risk of injury from potential hazards. - Spill Containment Measures: Implement spill containment measures such as drip trays and spill kits at refuelling stations to capture and contain accidental spills efficiently. - Equipment Shutdown: Establish procedures for safely shutting down fueling equipment in case of a detected malfunction or emergency situation. - Periodic Hazard Assessment: Conduct regular hazard assessments to identify any potential risks associated with poor equipment maintenance or malfunction, and address these issues proactively. - Equipment Replacement: Monitor fueling equipment for signs of wear and tear, and have a replacement strategy in place to ensure damaged or outdated equipment is replaced in a timely manner. 		
4. Secure Job Site	Unauthorised access, unsecured fuel containers	2M	<p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p> <p>[REDACTED]</p>	1L

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
