Rigging Work Granite | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Rigging Work Granite

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).

Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

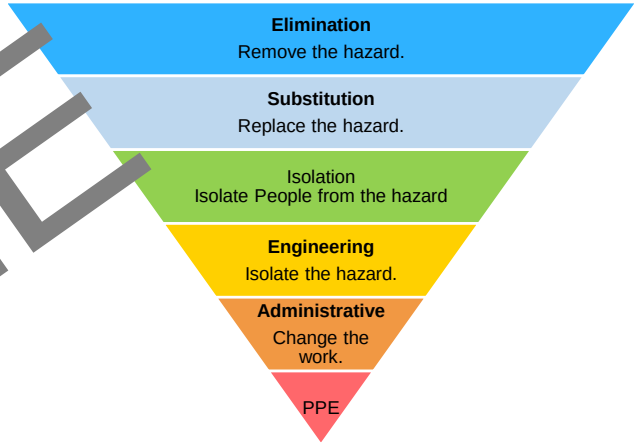
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips, trips and falls, manual handling injuries	2M	- Conduct a thorough risk assessment before beginning work to identify potential hazards in the work area and take necessary precautions to minimise risks. This should include assessing ground conditions, access routes, and overhead obstructions that could lead to slips, trips, or falls. - Establish clear and designated walkways in the work area to prevent obstacles and reduce the chances of trip hazards. These walkways should be marked with visible signage indicating their purpose. - Implement housekeeping measures, such as regular cleaning and maintenance of the workspace, to ensure it stays clear of debris, spills, and other hazards that can cause slips or trips. Schedule periodic inspections to enforce these housekeeping practices. - Provide workers with appropriate PPE such as non-slip safety footwear, gloves suitable for the tasks being performed, and relevant safety harnesses to mitigate the risk of injuries caused by manual handling or falls. - Implement a buddy system where two or more workers collaborate on tasks requiring heavy lifting or manual handling. This ensures that loads are distributed evenly between workers, reducing the likelihood of injury from excessive force or strain. - Train personnel on proper lifting techniques and body mechanics, emphasising proper posture, grip, and positioning when moving and handling materials. Regularly provide refresher training to keep workers up-to-date with best practices. - Utilise ergonomically designed tools and equipment whenever possible to reduce muscle strain and the potential for injury during manual handling tasks. These may include using levers to move heavy equipment or utilising equipment like lift-assist devices to maneuver granite slabs into place. - Use mechanical aids, such as hoists or trolleys, to move heavy loads and materials whenever possible, rather than relying on manual labour alone. This reduces the physical load on workers and lowers the risk of manual handling injuries. - Plan the work in stages, arranging break periods between tasks involving manual handling and those with lower physical demands. This allows workers time to rest and recover, thus reducing the risk of injury caused by fatigue. - Encourage a strong safety culture, in which workers feel empowered to report hazards, near misses, and injuries. Regularly review safety policies and procedures to ensure that they are effective at addressing identified risks, and update them as necessary based on reported incidents or new information about best practices in rigging work involving granite.	1L	
2. Equipment Selection	Incorrect equipment, overloading	3H	- Proper Equipment Inspection: Thoroughly inspect all rigging equipment prior to use, ensuring that they are in good working condition and free from any visible defects or damages.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Manufacturer's Guidelines: Follow the manufacturer's guidelines and recommendations for the selection, usage, and maintenance of rigging equipment to prevent incorrect equipment selection and overloading risks. - Load Rating Compliance: Ensure that all rigging equipment has a load rating appropriate for the weight and size of the granite being handled to avoid overloading. - Equipment Compatibility: Make sure that all rigging components are compatible and work together seamlessly, minimising the risk of using incorrect equipment or overloading. - Skills and Training: Provide training to all workers involved in rigging operations involving granite, focusing on correct equipment selection, inspection, and safe handling procedures. - Rigging Plan Development: Create a comprehensive rigging plan that outlines the specific equipment and procedures to be used for each step of the operation, aiming to minimise errors caused by incorrect equipment selection and overloading. - Supervision and Communication: Ensure that a qualified supervisor with rigging expertise is present at all times during the operation, closely monitoring the work and communicating safety instructions to workers as needed. - Regular Equipment Maintenance: Implement a regular maintenance schedule for all rigging equipment, keeping them in optimal working condition and reducing the chances of malfunction due to wear and tear. - Emergency Response Procedures: Develop and document emergency response procedures tailored to potential rigging incidents, including contingencies for situations involving incorrect equipment and overloading. - Periodic Review and Update: Conduct periodic reviews of the implemented control measures and make updates as necessary, considering factors such as changes in equipment technology, industry best practices, and lessons learned from past incidents.		
3. Rigging Inspection	Defective rigging components, worn slings	3H	- Conduct pre-use visual inspection: Check all rigging components, including slings, hooks, and shackles, for any visible signs of wear, damage, or defects before initiating the rigging work. - Follow manufacturer's guidelines: Always adhere to the equipment manufacturer's specifications and recommendations in terms of maintenance, inspections, and load limits. - Establish regular inspection intervals: Schedule periodic inspections of rigging components by a competent person to identify any wear, damage, or potential hazards. - Implement a tagging system: Attach tags indicating inspection dates, load limits, and relevant information on all rigging components to maintain an organised and trackable inspection regime.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Conduct load testing: Periodically perform load tests on rigging gear to ensure its capacity and stability under different working conditions. - Complete repairs or replacements promptly: If defects are identified during inspections, immediately address them by repairing or replacing the affected components to prevent accidents and injuries in the workplace. - Remove damaged equipment from service: Any worn or defective rigging components should be removed from service, labeled with relevant information, and quarantined until properly repaired or replaced. - Provide adequate training: Ensure that workers responsible for rigging operations have received appropriate training and certification so that they can competently inspect, assemble, and operate rigging systems. - Use appropriate sling materials: Slings must be made of suitable materials--such as synthetic, wire rope, or chain--that are compatible with the loads and environmental conditions they will be subjected to during rigging operations. - Store rigging equipment appropriately: When not in use, rigging components should be cleaned and stored in places that are free from moisture, chemicals, or other factors that could contribute to their degradation. - Maintain clear communication: Regularly communicate with team members about the status of rigging equipment and establish protocols for reporting any observed hazards or defects. - Document inspection findings: Keep a record of all rigging equipment inspections, including the inspector's name, date of inspection, equipment details, and any actions taken in response to identified hazards or defects.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
