Roof and Ceiling Spaces | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Roof and Ceiling Spaces

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

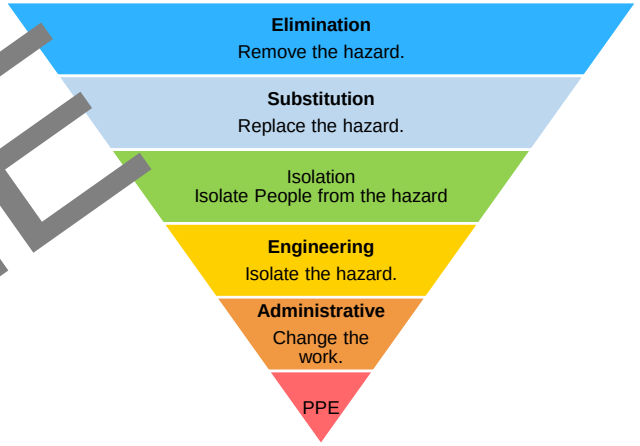
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Fall from height, Exposure to asbestos	3H	- Fall prevention: Install perimeter guardrails or temporary edge protection before commencing work at elevated levels to eliminate the risk of falling from height. - Secure footing: Ensure the roof and ceiling spaces are stable and able to support weight loads, by conducting frequent inspections prior to beginning any work in these areas. - Access equipment: Utilise properly maintained, compliant and industry-approved access equipment such as scaffolding, portable ladders or cherry pickers to safely access roof and ceiling spaces. - Personal protective equipment (PPE): Require workers to wear appropriate PPE such as non-slip footwear, high visibility clothing, and fall arrest systems to mitigate risks of injury while working at elevated positions. - Awareness and training: Provide ongoing training and awareness courses for workers on specific hazards, safe work practices, and emergency procedures related to working in roof and ceiling spaces. - Asbestos management plan: Develop and implement an asbestos management plan, complying with relevant laws and regulations, to identify and assess potential risks associated with exposure to asbestos materials. - Asbestos removal certification: Ensure that workers responsible for handling asbestos-containing materials (ACMs) have proper training and certifications required for safe removal or encapsulation. - Controlled access: Restrict access to roof and ceiling spaces only to authorised personnel trained in the identification and handling of ACMs, thereby minimising potential exposure to asbestos fibers. - Safe work method statements (SWMS): Before starting any work involving roof and ceiling spaces, develop and review SWMS with all involved personnel, addressing potential hazards and establishing clear step-by-step procedures ensuring safety through the entire course of the project. - Emergency procedures: Establish and communicate a clear protocol for emergencies, instructing workers on first aid measures, rescue plans, incident reporting, and communication lines in case of accidents, injuries or exposure to hazardous materials. - Regular monitoring and auditing: Conduct periodic inspections and audits of safety measures and control practices, to ensure compliance with established guidelines, continuous improvement, and quick identification of new risks or hazards in roof and ceiling spaces.	2M	
2. Accessing roof space	Slips, trips and falls, Roof collapse, Contact with high voltage wires	3H	- Provide workers with appropriate training regarding the safe access and movement within roof spaces, as well as proper use of equipment. - Conduct a thorough risk assessment of the work area before accessing the roof space, identifying and eliminating possible hazards where possible.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Ensure that workers are wearing appropriate personal protective equipment (PPE), such as non-slip footwear, gloves, and safety goggles. High-visibility clothing should also be worn to clearly see other workers. - Utilise proper access equipment, such as stable ladders or scaffold systems, to ensure a secure entry and exit point to the roof space. - Install temporary guardrails, edge protection systems, or warning lines around any open edges or fragile areas within the roof space to prevent falls. - Securely cover or barricade any openings, including skylights, vents, and hatches, to prevent potential slips or trips. - Establish a designated walkway or path, marked by signs or barriers, for workers to follow while navigating the roof space, minimising disruptions to structural integrity and minimising trip hazards. - Implement regular inspections of the work area throughout the project's duration to monitor conditions and ensure that control measures are effectively maintained. - Place warning signs at the entrance of the roof space, notifying workers of potential hazards such as fragile roofing materials or electrical installations. - Establish exclusion zones around high voltage wires to prevent accidental contact; communicate these zones to all workers and provide training on maintaining a safe distance during work. - Provide workers with safety harnesses or other fall arrest systems when working in areas where guardrails or edge protection is not feasible. - Maintain good housekeeping practices within the roof space, ensuring that tools, equipment, and excess materials are stored correctly and clutter is minimised to avoid trip hazards. - Ensure proper lighting conditions are installed within the roof space; portable lighting devices should be used as needed. - Establish an emergency response plan, which outlines the procedure for dealing with any accidents or incidents that may occur within the roof space, and communicate this plan to all workers.		
3. Insulating ceiling spaces	Ineffective insulation, Respiratory hazards	2M	- Adequate training: Ensure that all workers are well-trained and familiar with the appropriate insulation materials and techniques before starting any insulating work in ceiling spaces. - Proper ventilation: Make sure that the working area is well-ventilated to minimise the risk of respiratory hazards and to provide a safe environment for workers. - Personal protective equipment (PPE): Provide workers with suitable PPE, including gloves, safety goggles, and masks or respirators to protect them from dust, fibers, and other potential inhalation hazards.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Material handling and storage: Store insulation materials properly and handle them with care to avoid damage, which could lead to the release of hazardous particles or ineffective insulation performance. - Regular inspection: Conduct regular inspections of the insulation materials to ensure their integrity, as well as detect any signs of wear, damage, or improper installation. - Safe work procedures: Develop and implement safe work procedures when installing insulation materials, including measures such as using tools and equipment correctly, avoiding overexertion, and taking regular breaks. - Dust management: Implement dust suppression measures, such as using vacuum cleaners or wet methods to clean up dust, to minimise the generation of airborne particles and reduce respiratory hazards during insulation work. - Communication and signage: Clearly communicate potential hazards to workers and display appropriate warning signs at the worksite in order to raise awareness of risks associated with insulating ceiling spaces. - First aid provision: Ensure the availability of first aid supplies and trained personnel on-site to provide prompt medical assistance in case of injury or respiratory issues. - Emergency response plan: Develop an emergency response plan, including evacuation procedures and designated safe areas, to deal with any incidents that may arise during the insulating work. - Continuous improvement: Regularly review and update the Safe Work Method Statement (SWMS) to include new best practices, lessons learned, and any changes to regulations, ensuring continuous improvement of safety measures for insulating ceiling spaces.		
4. Installing electrical wiring	Electrocution, Poor connections, Overloading circuits	3H	[redacted]	1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
