

**Rope Access Systems | SAFE WORK METHOD STATEMENT (SWMS)**

**TASK OR ACTIVITY: Rope Access Systems**

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

**THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT**

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature: \_\_\_\_\_ Title: \_\_\_\_\_ Date: \_\_\_\_\_

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name: \_\_\_\_\_ Title: \_\_\_\_\_ Phone: \_\_\_\_\_

**ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED** | **NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS**

	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, to conduct and communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

**CLIENT OR PRINCIPAL CONTRACTOR DETAILS**

Client:	SCOPE OF WORKS Provide a detailed description of the specific work being carried out (otherwise known as scope of works).
Project Name:	
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

**ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT**

<input type="checkbox"/> involves a risk of a person falling more than 2 meters.	<input type="checkbox"/> is carried out on or near pressurised gas mains or piping.
<input type="checkbox"/> is carried out on a telecommunication tower.	<input type="checkbox"/> is carried out on or near chemical, fuel or refrigerant lines.
<input type="checkbox"/> involves demolition of an element of a structure that is load-bearing.	<input type="checkbox"/> is carried out on or near energised electrical installations or services.
<input type="checkbox"/> involves demolition of an element related to the physical integrity of a structure.	<input type="checkbox"/> is carried out in an area that may have a contaminated or flammable atmosphere.
<input type="checkbox"/> involves, or is likely to involve, disturbing asbestos.	<input type="checkbox"/> involves tilt-up or precast concrete.
<input type="checkbox"/> involves structural alteration or repair that requires temporary supports to prevent collapse.	<input type="checkbox"/> is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
<input type="checkbox"/> is carried out in or near a confined space.	<input type="checkbox"/> is carried out in an area of a workplace where there is any movement of powered mobile plant.
<input type="checkbox"/> is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	<input type="checkbox"/> is carried out in areas with artificial extremes of temperature.
<input type="checkbox"/> is carried out in or near water or other liquid that involves a risk of drowning.	<input type="checkbox"/> involves diving work.

**ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY**

<input type="checkbox"/> Forklift	<input type="checkbox"/> Crane/s	<input type="checkbox"/> Hoist/s	<input type="checkbox"/> Excavator	<input type="checkbox"/> Backhoe/Loader	<input type="checkbox"/> Boom Lift	<input type="checkbox"/> EWP	<input type="checkbox"/> Genie Lift

RISK MATRIX										
LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS		
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			<b>Elimination</b> Remove the hazard.		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	<b>Substitution</b> Replace the hazard.		
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	<b>Isolation</b> Isolate People from the hazard		
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	<b>Engineering</b> Isolate the hazard.		
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	<b>Administrative</b> Change the work.		
								<b>PPE</b>		

**Notes on Hierarchy of Controls:** Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.

PERSONAL PROTECTIVE EQUIPMENT (PPE)											
FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE/FACE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

**Note:** A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips, trips and falls, dropped objects	2M	<ul style="list-style-type: none"> <li>- Proper Housekeeping: Regularly maintain a clean work environment to minimise clutter and obstacles that may lead to slips, trips, and falls.</li> <li>- Appropriate Footwear: Ensure that workers wear appropriate footwear with slip-resistant soles to minimise the risk of falling.</li> <li>- Tool Lanyards: Use tool lanyards or suitable attachments to secure equipment and prevent dropped objects while working at height.</li> <li>- Edge Protection: Install edge protection/barriers around the perimeter of the work area to prevent accidents and potential falls.</li> <li>- Equipment Inspection: Frequently inspect all equipment, including ropes, harnesses, and hardware, to ensure they are in good working condition and free from damage.</li> <li>- Personal Protective Equipment (PPE): Provide workers with the necessary PPE, such as helmets, safety gloves, and eyewear, to protect them from potential hazards.</li> <li>- Training: Conduct regular training sessions to educate workers about hazard identification, risk management, and proper use of equipment, emphasising the importance of following safe work practices.</li> <li>- Clear Work Zones: Clearly mark work zones and conduct ongoing monitoring to ensure workers stay within designated areas to minimise the risk of unexpected incidents.</li> <li>- Communication: Maintain clear lines of communication between team members both on the ground and at height to coordinate activities and raise any concerns or hazards.</li> <li>- Work at Height Permits: Implement a permit system for rope access work, ensuring workers have documented authorization, and supervisors understand the scope of the work and expected controls.</li> <li>- Emergency Procedures: Establish emergency procedures and rescue plans specific to rope access work, accounting for potential incidents such as falls, entanglements, or medical emergencies.</li> <li>- Signs and Barricades: Set up appropriate signs and barriers around the work zone to alert other workers and visitors of the hazards, making them aware of the need for additional caution when approaching the area.</li> </ul>	1L	
2. Access and Egress	Falling from height, unsecured tools or equipment	3H	<ul style="list-style-type: none"> <li>- Implement a comprehensive rope access system, including anchor points, ropes, and harnesses that comply with local regulations and industry standards to ensure safe access and egress.</li> <li>- Ensure workers are thoroughly trained in the proper use of rope access equipment and techniques, as well as in hazard identification and risk management.</li> </ul>	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> <li>- Conduct regular inspections and maintenance of all rope access equipment to confirm it remains in good working order and replace any damaged or worn-out components immediately.</li> <li>- Establish clear communication protocols between workers at height and ground support personnel to coordinate safe movement and monitor for potential hazards.</li> <li>- Utilise secondary safety systems like fall arrest devices and backup anchors to provide added protection against falls from height during access and egress operations.</li> <li>- Develop a procedure for securing tools and equipment while working at height, such as tethering items to workers' harnesses or using tool bags designed for elevated work environments to prevent dropped objects.</li> <li>- Enforce a strict 'no working beneath' policy to eliminate the risk of injury due to falling tools, equipment, or workers during access and egress operations.</li> <li>- Create and design an exclusion zone around the work area where access and egress activities are taking place, using barriers or warning signs to alert bystanders and prevent unauthorized entry.</li> <li>- Prepare and maintain an emergency response plan that includes methods for the rescue and evacuation of workers from height in the event of an incident or injury.</li> <li>- Promote a strong safety culture within the workplace by encouraging open communication about potential hazards, enforcing safe work practices, and maintaining up-to-date training on safety procedures and regulations related to rope access systems and working at height.</li> </ul>		
3. Inspection and Assessment	Incorrect identification of anchor points, uncontrolled rope movement	2M	<ul style="list-style-type: none"> <li>- Implement a regular inspection schedule to ensure that anchor points are identified and assessed by a competent person before beginning any rope access work.</li> <li>- All anchor points should be visibly marked, labelled, and tagged with their load capacity information for easy reference during inspections and assessments.</li> <li>- Ensure all workers completing rope access tasks have been trained in the correct identification of anchor points and anchor selection criteria.</li> <li>- Utilise written checklists containing pre-defined criteria for evaluating suitable anchor points. These checklists should address factors such as structural integrity, material type, and location on the worksite.</li> <li>- Use engineered, certified anchor points where possible to reduce the risk of incorrect identification and possible failure during rope access work.</li> <li>- Conduct regular toolbox talks and safety briefings to reinforce awareness of correct procedures for inspecting, assessing, and selecting anchor points for rope access work.</li> <li>- Limit the number of personnel on a single rope setup and ensure only one worker per anchorage point; thus, reducing the likelihood of uncontrolled rope movement and potential hazards due to overloaded anchors.</li> </ul>	1L

**SIGNATORIES OF THE SAFE WORK METHOD STATEMENT**

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

**SAFE WORK METHOD STATEMENT MONITORING AND REVIEW**

**The SWMS must be reviewed regularly** to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

**The SWMS must be monitored regularly** for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST			
This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.
