Roto Mould | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Roto Mould

Business Name: [Company Name]		ABN: [ABN]	SWMS#
Business Address: [Company Address]			
Contact Person:	Phone: [Phone]	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:

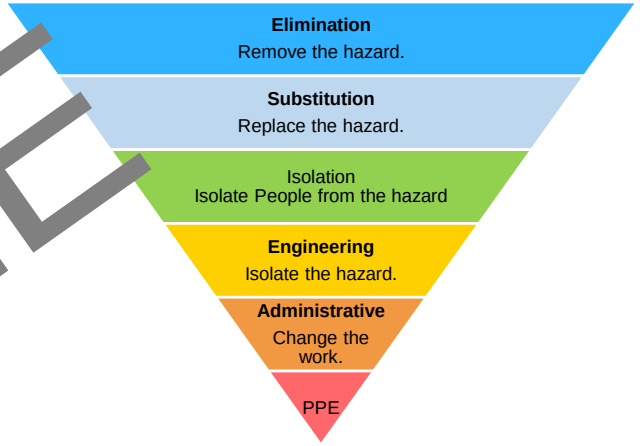
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Manual handling, Trip hazards	2M	- Provide manual handling training to workers, helping them understand proper lifting techniques, and how to identify when they should seek assistance. - Regularly inspect the worksite for trip hazards, such as exposed wires or stray tools, and correct any issues immediately to ensure a clean and organised workspace. - Utilise mechanical aids and equipment, like trolleys or forklifts, to help move heavy materials, reducing the strain on workers. - Encourage workers to ask for assistance from their colleagues if they are unable to safely move or lift an object on their own. - Implement a work rotation system to limit the amount of time each worker spends performing repetitive or strenuous tasks, reducing the risk of repetitive stress injury or strain. - Ensure proper lighting in the workspace to make all possible hazards visible. - Set up designated walkways, marked with hazard tape or signs, to keep workers away from dangerous areas and reduce trip hazards. - Keep aisles and passageways free from clutter and clearly mark them to prevent tripping incidents. - Install anti-slip flooring material in work areas that may become slippery due to spilled liquids or other substances. - Regularly review and update the risk assessment procedures for this work step, ensuring that all potential hazards have been identified and suitable control measures implemented. - Conduct toolbox talks and safety meetings to discuss the importance of workplace health and safety, keeping employees informed and aware of their responsibilities. - Require workers to wear appropriate personal protective equipment (PPE), such as steel-toed shoes, high visibility vests, gloves, or helmets, depending on the specific tasks being performed. - Establish clear procedures for reporting and managing hazards, incidents, and near misses, ensuring that all workers are comfortable bringing forward concerns about their safety and well-being.	1L	
2. Equipment setup	Electrical hazards, Incorrect equipment use	3H	- Regular inspection and maintenance of electrical equipment: Ensure that all electrical equipment undergoes routine inspections and maintenance checks by a qualified electrician to minimise electrical hazards. - Use equipment according to the manufacturer's instructions: Employees must follow the guidelines provided in the equipment manual to ensure proper setup and usage, reducing the risk of incorrect equipment use.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Ensure appropriate power supply: Check that the equipment is connected to an appropriate power supply with the correct voltage rating to avoid overloading or fluctuations in power. - Install Ground Fault Circuit Interrupters (GFCI): Incorporate GFCI in the electrical setup to prevent electrocution and safeguard against possible electrical hazards. - Use Personal Protective Equipment (PPE): Workers should wear appropriate PPE, such as safety gloves, safety glasses, and steel-toed shoes, during equipment setup and operation. - Provide training on equipment setup and usage: Offer comprehensive training programs for employees who handle equipment to ensure they understand how to set up and properly use it. - Implement lockout/tagout procedures: Establish lockout/tagout systems to isolate energy sources during equipment setup and maintenance, minimising the risk of accidental energization. - Maintain clean and dry work areas: Keep workspaces free from water, grease, and debris to reduce the likelihood of slips, trips, falls, and electrical hazards. - Avoid extension cord misuse: Limit the use of extension cords and only use those with proper load capacity for the intended purpose. - Manage cables effectively: Implement cable management practices like using cable ties, covers, or organizers to keep cables neat and safe, preventing tripping hazards and tangled cords. - Limit access to unauthorised personnel: Establish designated zones for equipment setup and ensure only authorised individuals are granted access to reduce risks associated with unsupervised equipment use. - Encourage reporting of faulty equipment: Encourage employees to report any damaged or malfunctioning equipment immediately, and remove it from use until repaired or replaced. - Ensure proper ventilation: Properly ventilate work areas to dissipate heat generated by equipment and reduce the risk of overheating or fire hazards. - Conduct regular risk assessments: Routinely evaluate potential hazards in the workplace and update safety protocols as needed to maintain a safe work environment during equipment setup and operation.		
3. Loading materials	Falling objects, Forklift interaction	3H	- Clearly mark designated loading and unloading areas to minimise accidents involving falling objects or forklift interactions. - Conduct regular safety training sessions for both operators and factory workers on best practices for safely handling materials and operating forklifts. - Ensure that all employees wear appropriate personal protective equipment (PPE), such as hard hats, steel-toed shoes, and reflective vests during the loading process.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Establish a communication system among employees using hand signals, radios, or other approved methods to coordinate the safe movement of materials and forklift operation. - Inspect all equipment, including forklifts and lo[illegible]g accessories, before each use to ensure they are in proper working conditi[illegible] - Implement barricades, warning signs, or re[illegible]cted ac[illegible]ss zones around the loading area to prevent unauthorised personne[illegible] entering. - Enforce a 'no stacking' rule f[illegible] unstable and une[illegible]n loads t[illegible]revent materials from falling during loading or u[illegible]ading. - Ensure correct lifti[illegible]niques[illegible]d tools are used [illegible]hen manually loading materials, traini[illegible]employe[illegible] on ho[illegible]to lift heav[illegible]tems effectively. - Create and [illegible]plement a m[illegible]intenanc[illegible]le for forklifts and other loading equip[illegible]nt to e[illegible]re opti[illegible]l performanc[illegible] and safety standards are maintained. - Emp[illegible]ly trai[illegible]and authorised personnel to operate forklifts and other loading equipm[illegible]thin the [illegible]orkplace. - Develo[illegible] an [illegible]ergenc[illegible]esponse plan to address potential accidents or incidents volving falling[illegible]jects and forklift interaction, including evacuation procedures and firs[illegible]id p[illegible]tocol. - Encoura[illegible] a safety-conscious culture in the workplace where employees feel e[illegible]powered to report unsafe practices or conditions without fear of retaliation. - Regularly review and update the SWMS to ensure control measures remain effective and relevant as new equipment, materials, or work procedures are introduced. - Conduct periodic safety audits and inspections to ensure all control measures are being consistently implemented and followed throughout the workplace.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
