Rubber Compounding Mill | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Rubber Compounding Mill

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

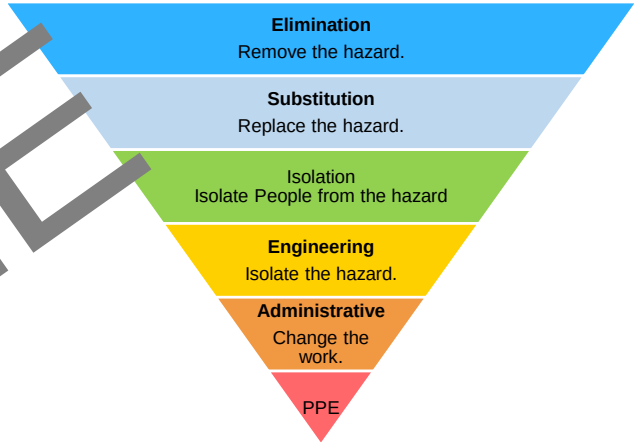
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Slips and falls, Electrical hazards	2M	- Ensure that the work area around the Rubber Compounding Mill is clean and free of any debris, spills, or other obstructions to minimise the risk of slips and falls. - Provide adequate lighting in the work area to ensure good visibility while workers are carrying out their tasks, reducing the likelihood of accidents due to poor lighting conditions. - Install slip-resistant flooring or mats near the Rubber Compounding Mill to reduce the risk of slips and falls during the preparation stage. - Require all employees working in the area to wear appropriate personal protective equipment (PPE), such as slip-resistant footwear, to further decrease the chances of slipping or falling incident. - Incorporate proper training programs for employees to educate them about potential hazards associated with the preparation process and how to safely prepare the Rubber Compounding Mill area. - Inspect and maintain electrical equipment regularly, including the Rubber Compounding Mill and related machinery, to prevent electrical malfunctions and hazards that can lead to serious injuries. - Ensure that all electrical systems, sockets, and wiring are properly grounded and visually inspect them for signs of damage, loose connections, or frayed cables that could pose an electrical hazard. - Establish clear standard operating procedures (SOPs) for the safe use of the Rubber Compounding Mill equipment during the preparation phase to minimise miscommunication and confusion among workers. - Clearly mark safety zones and access points around the Rubber Compounding Mill so that workers are aware of hazardous areas and the required minimum distance to maintain from live electrical parts and moving machinery. - Implement an emergency response plan for handling potential incidents around the Rubber Compounding Mill, which includes immediate shutdown procedures, first aid provisions, and evacuation routes should an accident involving slips and falls or an electrical hazard occur.	1L	
2. Weighing raw materials	Manual handling injuries, Exposure to chemicals	2M	- Provide appropriate lifting aids such as pallet jacks, trolleys, or forklifts to assist in the transport and handling of raw materials, thereby reducing manual handling risks. - Ensure workers receive proper training on correct lifting techniques and manual handling procedures to minimise the risk of injury when handling raw materials. - Establish designated weighing stations with clear signage and adequate space to ensure safe maneuvering of raw materials during the weighing process. - Implement a system for regular inspection and maintenance of lifting equipment to ensure it is functioning correctly and safely.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Limit worker exposure to hazardous chemicals by providing suitable PPE, such as gloves, safety goggles, and overalls, specifically designed for the types of chemicals being used. - Require all workers handling chemicals to undergo comprehensive chemical safety training to understand the associated hazards, necessary precautions, and emergency response procedures. - Install proper ventilation systems at the weighing stations to help disperse airborne chemical contaminants and maintain good air quality. - Utilise closed containers or sealed bags when storing and transporting powdered chemicals to minimise dust and exposure to hazardous substances. - Store highly reactive or hazardous chemicals separately from others, following guidelines outlined in their respective Material Safety Data Sheets (MSDS). - Implement a comprehensive disposal plan for unwanted or expired chemicals according to local environmental regulations. - Regularly review and update job-specific SWMS to account for any changes in work processes, equipment, or layout that may influence hazard management strategies. - Ensure that emergency eyewash stations and showers are readily available in case of accidental chemical exposure, with clear instructions on their use. - Schedule routine health checks for workers exposed to hazardous chemicals to monitor any potential ill effects and provide ongoing support as needed. - Encourage a proactive safety culture where employees feel empowered to report any concerns regarding workplace hazards or unsafe practices without fear of retribution, helping to maintain ongoing vigilance and improvement in workplace safety.		
3. Mixing ingredients	Dust exposure, Noise exposure	3H	- Proper ventilation: Ensure that the workspace has proper and well-maintained ventilation systems to prevent dust build-up and facilitate airflow. - Dust suppression systems: Integrate dust suppression systems (e.g., mist systems or chemical additives) during the mixing process to reduce dust generation. - Personal Protective Equipment (PPE): Provide necessary PPE such as dust masks, safety goggles, and gloves for workers handling the rubber compounding materials. - Noise barriers: Install noise reduction barriers (such as acoustic panels or partitions) around the mixing area to minimise noise exposure to workers. - Regular cleaning: Implement a routine cleaning schedule to ensure work surfaces and equipment are free from accumulated dust and debris. - Task rotation: Rotate workers through different tasks to limit any individual's exposure to dust and noise pollution.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Noise-reducing equipment: Invest in quieter machinery and equipment to minimise noise levels in the facility. - Employee training: Conduct regular training sessions on safe working procedures related to managing dust and noise exposure, ensuring all employees are adequately informed. - Monitoring of exposure levels: Routinely monitor and record dust and noise levels in the workplace to ensure they remain within acceptable limits. - Emergency preparedness: Develop an emergency action plan in case of incidents resulting from high levels of dust or noise exposure, to mitigate potential employee injuries. - Enclosed mixing process: Consider implementing enclosed mixing processes, where possible, to contain and further reduce dust and noise emissions. - Soundproofing: Utilise soundproofing materials or techniques to separate the rubber compounder's mixing area from other workspaces. - Regular maintenance: Perform regular maintenance on all equipment, particularly dust extraction systems and noise reduction measures, to ensure efficiency and effectiveness. - Work procedure adjustments: Modify work procedures, if necessary, to reduce dust and noise levels – e.g., reducing the speed at which ingredients are mixed, or adjusting the equipment settings.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
