Shrink Wrapper | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Shrink Wrapper

Business Name: [Company Name]		ABN: [ABN]	SWMS#
Business Address: [Company Address]			
Contact Person:	Phone: [Phone]	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

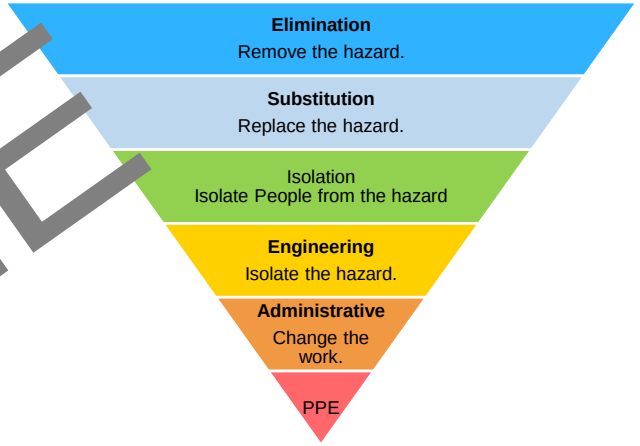
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip hazards, Falling objects	2M	- Develop and implement a proper housekeeping plan that includes regular inspection and cleaning of the work area to minimise trip hazards, such as cables, trash, or debris. - Clearly mark designated walkways and storage areas to keep pathways clear for movement and prevent obstruction due to clutter. - Train staff on proper lifting techniques and handling of materials to reduce the risk of dropping items or losing the grip on tools and equipment that may cause them to fall. - Utilise appropriate personal protective equipment (PPE) like steel-toed boots, helmets, and gloves to protect against falling objects and trip hazards. - Establish designated zones for storing tools, equipment, and materials away from walkways and workspaces, reducing the chances of creating trip hazards. - Install non-slip mats and adhesive tapes in high-traffic areas to ensure proper traction between shoes and surfaces, reducing the likelihood of slipping or tripping. - Conduct regular safety toolbox talks to remind employees of potential hazards and control measures, fostering a safety-conscious culture in the workplace. - Install guardrails, barriers, or other physical boundaries in hazardous areas where workers are exposed to risks associated with moving machinery, uneven floors, or slippery surfaces, to serve as a warning and provide additional protection. - Encourage workers to report any trip hazards or unsafe situations immediately, and address the issue promptly to reduce the risk of accidents. - Ensure adequate lighting in the work area to enhance visibility, making it easier to identify trip hazards and navigate through the space safely. - Implement a system for regular maintenance checks of machinery and tools, ensuring they are in proper working condition and free of any obstacles that could result in falling objects as a consequence of malfunctioning.	1L	
2. Machine Setup	Electrical hazards, Pinch points	3H	- Ensure proper inspection and maintenance of electrical wiring in the machine and work area, including the use of grounded and insulated cables. - Verify correct voltage and power supply are set for the machine to prevent potential electrical incidents, such as surges, current fluctuations, or short circuits while setting up. - Make sure appropriate personal protective equipment (PPE) like gloves and safety shoes are used during the setup process to protect against electrical hazards and pinch points. - Install machine guards or removable barriers around dangerous working parts, such as rollers, conveyors, and blades, to prevent unauthorised access and accidental contact with pinch points.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Follow the manufacturer's guidelines and standard operating procedures when setting up the machine to ensure safe and efficient operation. - Before beginning the setup process, perform a thorough risk assessment of the machine and its surroundings to identify potential hazards. - Provide ongoing training and refresher courses to all personnel involved in the shrink-wrapping process to maintain a high level of competence in machine operation and hazard controls. - Use caution signs and warning labels on and around the shrink wrapper machine to alert workers of the potential electrical hazards and pinch points in the area. - Conduct regular inspections and audits to verify that control measures are being effectively implemented and updated as needed. - Implement a clear procedure for reporting and acting upon machine malfunctions or hazards promptly to minimise risks associated with the setup. - Use lockout/tagout procedures when servicing, adjusting, or cleaning the shrink wrapper machine during setup to prevent accidental startups or movements. - Encourage open communication among team members about potential hazards, and foster an atmosphere where employees feel empowered to report risks without fear of reprisal. - Ensure adequate lighting and visibility in the workspace to increase the chances of detecting any potential hazards during the machine setup. - Establish emergency response procedures and conduct regular drills to prepare workers for any unexpected events involving electrical hazards or pinch points that could occur during the setup process.		
3. Product Loading	Manual handling injuries, Slips and falls	3H	- Proper training: Ensure that all workers are adequately trained in correct manual handling techniques to avoid strain injuries and incorrect body posture during product loading. - Ergonomic equipment: Utilise mechanical aids such as trolleys, hand trucks, and pallet jacks to reduce the effort required for lifting, moving and stacking products. - Appropriate footwear: Require workers to wear suitable non-slip footwear with good traction to minimise the risk of slips and falls during the product loading process. - Safe Working Load (SWL) limits: Clearly display SWL limits on all loading equipment and enforce strict adherence to these limits to prevent overloading and subsequent injuries. - Regular maintenance checks: Conduct routine inspections and maintenance of all product-loading equipment to ensure its safety and reliability, reducing the risk of accidents and breakdowns during operation. - Housekeeping measures: Maintain a clean, organised and clutter-free workspace by implementing regular cleaning schedules and efficiently managing waste materials to prevent slip and trip hazards.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Spill management: Implement an effective spill response plan including immediate containment, cleanup, and disposal of any liquids or materials that could pose a slipping hazard during product loading. - Effective communication: Encourage open cha[illegible]els of communication among workers to share information about potential [illegible]zards and suggest improvements in the workplace safety procedures related to [illegible]duct loadi[illegible] tasks. - Adequate lighting: Provide sufficient and well-[illegible]uted lighting throughout the work area to enhance visibility and make it easie[illegible]r workers to [illegible]vigate without slipping or tripping. - Monitoring and review: Analyse [illegible]rformance data, i[illegible]ent reports, and employee feedback to evalu[illegible] the [illegible]cacy o[illegible]xisting control measures and implement continuous im[illegible]vements t[illegible]maintai[illegible]n optim[illegible]level of workplace health and safety during[illegible]duct loadi[illegible]

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
