Full Name:		Title:	Phone:
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS VMS HAVE THE FOLLOWING COMMUNICATED	NA. 2 OF ALL RELEVANT PERSONN EVELOPMENT AND APPROVAL OF	NEL WHO HAVE BEEN CONSULTED AND THIS SWMS	COMMUNICATED TO IN THE
Safety meetings or toolbox talks will be scheded ed in accorded with regislative requirements to first identify any site hazards, to continuous te those hazards and then to further take steps to either eliminate or con			
If an incident or a near miss occurs, all work must standardly. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Conduct a thorough visual inspection of area to identify and remove loose debris prior to commencement of work.	
			- Provide adequate lighting to ensure all political azards are clearly visible during site preparation.	
			- Implement clear signage and barriers around as where the electrical wiring is present to prevent unauthorised access.	
			- Use lock-out tag O) physiqures to isolate when energised electrical circuits within the work area.	
			- Ensure that workers are equipped with personal protective equipment (PPE), such as gloves, safety glasses, and real-toed by is.	
1. Site Preparation	Loose debris, Live electrical wiring	3H	- Conjugate and wety briefing for all personnel involved in site preparation, emphasizing the particle and azards entified.	2M
			- Scheule qualring ections by a qualified safety officer to monitor compliance with safety protocols through ut to site play aration phase.	
			tablis design ted walkways and mark them clearly to keep foot traffic away from hazardous areas.	
	•	\	Prov. extinguishers and other emergency response equipment at strategic locations around the te.	
			- in all workers on emergency procedures and correct methods for handling and disposing of construction waste and debris.	
			These control measures, when properly implemented and monitored, will help ensure a safer environment during the site preparation phase of a shop fit-out.	
			- Ensure all workers are provided with and wear appropriate personal protective equipment (PPE), including dust masks or respirators, safety glasses, and hard hats.	
			- Implement wet demolition techniques to minimise dust generation, such as using water sprays or misters during the demolition process.	
			- Set up dust extraction units equipped with HEPA filters to capture airborne particles effectively.	
2. Demolition	Dust inhalation, Falling debris	4A	- Conduct a pre-demolition structural assessment to identify and plan for the removal of unstable elements safely.	3H
			- Erect temporary barriers or screens around the demolition site to contain falling debris and reduce the spread of dust.	
			- Regularly monitor air quality in and around the site to ensure it meets safe standards and adjust dust control measures as necessary.	
			- Schedule demolition activities when fewer people are present, such as after hours or on weekends, to minimise exposure.	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
		THOR	- Provide training for all personnel on appropriate demolition techniques and the risks associated with dust and debris.	TAIGH
			- Ensure that all waste is promptly removed from the one and disposed of according to local regulations to prevent accumulation.	
			- Utilize tools and machinery fitted with dusuppression eatures or attachments where possible.	
			- Establish exclusion zones around the demolor sea where only authorised personnel can enter.	
			- Conduct regular tool-box talks and safety briefly is to reinforce aftery protocols and ensure compliance among workers.	
			- Conduct regular alining assion on correct of hual handling techniques for all workers.	
			- Use mechanial aids, sur as trolle on klifts, wherever possible to minimise physical handling of materials.	
			- Clear to bell all uage areas with weight and type of material allowed to promote proper storage practic s.	
			- Design te so cific stonge areas for heavy and bulky items to ensure they are stored at ground level or	
			- Imparts a roughe inspection schedule to check the condition and arrangement of stored materials.	
		'	Provided rsonal protective equipment (PPE) such as gloves, back supports, and steel-capped boots to uce injury risk.	
3. Material Storage	Incorrect handling, Og		- Enforce strict rules regarding the maximum stacking height of materials to prevent overloading and toppling.	1L
			- Apply colour-coded systems and signage to help workers easily identify the correct handling procedures for different types of materials.	
			- Arrange frequent safety meetings to address and reinforce safe storage practices among the workers.	
			- Install racking and shelving units that conform to Australian Standards for load-bearing capacities to prevent structural failures.	
			- Encourage workers to operate in teams when moving heavier items to distribute the load safely.	
			- Maintain clear and unobstructed pathways in storage areas to reduce the risk of trips and falls.	
			- Ensure sufficient lighting in all storage locations to improve visibility and enhance safety.	
			- Include emergency response plans and first aid training specifically addressing potential injuries from material handling and storage incidents.

#### SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

#### SAFE WORK IN 'THIS 'S' ITEM ON MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remain effect, and must be reviewed (and revised if necessary) if relevant control measures are revised. The view as should be carried out in consultation with workers (including contractors as unputractors of the SWMS and their health and safety registeratives who represented that work group at the workplace.

When the SWMS has been revised the PCBD mest ensure the all persons involved with the work are advised that a revision has been made and how they can accept the revised SWMS, including all persons who will need to change a work procedure or system as a rest of the review are advised of the changes in a way that will enable them to implement their duties the total with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- Spot Checks.
- Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

#### SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.
