

TIG Welding | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: TIG Welding

Business Name: [Company Name]

ABN: [ABN]

SWMS#

Business Address: [Company Address]

Contact Person:

Phone: [Phone]

Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:

Signature:

Title:

Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS, as well as reviews and modifications of the SWMS.

Full Name:

Title:

Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED

NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS

Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, then to communicate those hazards and then to further take steps to either eliminate or control each hazard.

If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.

Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.

The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

<input type="checkbox"/> High Voltage	<input type="checkbox"/> Mulcher	<input type="checkbox"/> Tilt-up Panels	<input type="checkbox"/> Roller	<input type="checkbox"/> Scissor Lift	<input type="checkbox"/> Tractor	<input type="checkbox"/> Other -	

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION	HEIRARCHY OF CONTROLS
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE			Elimination Remove the hazard.
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEED	Substitution Replace the hazard.
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review before work starts.	Isolation Isolate People from the hazard
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.	Engineering Isolate the hazard.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	Monitor and keep records	Administrative Change the work. PPE

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferred when controlling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the third most effective, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Equipment) is the least effective method.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	EYE PROTECTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Falling object hazards, Electrical hazards	3H	<ul style="list-style-type: none"> - Secure the welding area: Identify the precise welding location and establish a well-organised workspace with designated areas for storing tools, equipment, and materials to minimise the risk of falling objects. - Workstation inspection: Prior to commencing work, conduct a thorough workstation and equipment assessment to identify any potential electrical hazards or faults related to TIG Welding. - Use appropriate personal protective equipment (PPE): Workers must wear the correct PPE, including safety footwear, helmets with auto-darkening lenses, full-body flame-resistant clothing, welding gloves, and respiratory protection to safeguard against the hazards associated with TIG welding. - Proper storage of materials: Ensure that all materials and objects that are not in use are stored safely to avoid the risk of falling objects. - Safe lifting and handling techniques: Train workers in safe lifting and manual handling techniques to reduce the risk of injury when moving heavy objects or equipment. - Equipment maintenance: Regularly inspect and maintain welding equipment, including cables, clamps, and power sources, to prevent electrical hazards due to faulty equipment wear and tear. - Isolate electrical sources: Disconnect all electrical equipment from power sources when not in use to prevent unauthorised use and minimise the risk of electrical hazards. - Use of GFCI protection: Use ground-fault circuit interrupters (GFCIs) to protect against electrical hazards by quickly cutting off the power supply in case of an electric fault or short circuit. - Implement lockout/tagout procedures: Follow proper lockout/tagout protocols to ensure that equipment is de-energised during servicing, repairs, or inspections, preventing accidental energization and electrical hazards. - Fall prevention measures: Secure ladders, scaffolding, and other elevated work platforms properly to prevent falls and dropped objects while working at heights. - Emergency response plan: Develop and implement a comprehensive emergency response plan to manage emergencies promptly, including procedures to address electrical hazards, fire incidents, and first aid response. - Training and communication: Continuously educate workers on safety regulations, hazard controls, and safe work practices to mitigate the risk of accidents caused by falling objects or electrical hazards during the TIG Welding process. 	2M	
2. Pre-weld Checks	Gas leaks, Equipment malfunction	3H	<ul style="list-style-type: none"> - Regular inspection: Ensure regular and thorough inspections of welding equipment, hoses, cylinders, and valves by a qualified professional to check for any signs of wear, tear or damage. 	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Leak testing: Before beginning any work, conduct a leak test on all gas connections, hoses, and cylinders to detect any traces of leaking gas that could lead to a potential hazard. - Equipment maintenance: Keep all welding equipment and tools in good working condition by following the manufacturer's guidelines and recommendations, including routine servicing and timely replacement of faulty parts. - Ventilation: Ensure proper ventilation in the workspace to dissipate any hazardous gases that may accumulate during the welding process and adequately circulate fresh air. - Gas cylinder storage: Store gas cylinders upright with safety caps in place when not in use and in a designated storage area that is well-ventilated, protected from direct sunlight, and away from heat sources. - Personal protective equipment (PPE): Wear appropriate PPE, such as welding helmets, gloves, boots, and flame-resistant clothing, to protect the user from hazards associated with welding. - Employee training: Provide comprehensive training for all workers involved in TIG welding tasks, focusing on safe work practices, hazard identification, and emergency response procedures. - Fire prevention measures: Keep a fire extinguisher readily available near the welding area, and avoid welding near flammable materials or substances. - Workspace organisation: Maintain orderliness and cleanliness around the welding area, removing any clutter, obstructions, or tripping hazards close to the equipment. - Emergency response plan: Establish and implement an emergency response plan detailing the steps to follow in case of a gas leak, equipment malfunction, or any other hazard during the welding process. - Safety signage and awareness: Display clear safety signage related to welding hazards within the workspace, and encourage open communication between team members if any potential hazards are identified during the pre-weld checks. 		
3. Personal Protective Equipment	Inadequate protection, Improper fit	3H	<ul style="list-style-type: none"> - Proper Training and Awareness: Ensure that all workers using TIG welding equipment receive adequate training, including correct usage of personal protective equipment (PPE) to minimise the risk of exposure to hazards. - Selection of Appropriate PPE: Provide suitable PPE such as fire-resistant overalls, gloves, footwear, earplugs or earmuffs, alongside correctly rated high-definition welding helmets, to mitigate the impact of potential hazards during TIG welding processes. - Ensuring Proper Fit: Check that workers' PPE fits correctly by conducting periodic inspections and sizing adjustments if necessary, as well-tailored protective gear significantly reduces the risk of inadequate protection. - Equipment Maintenance: Regularly maintain and replace worn-out PPE to ensure consistent and optimal protection from TIG welding-related hazards. 	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			<ul style="list-style-type: none"> - Implementing Safe Work Practices: Establish a set of standard operating procedures with guidelines for selecting, wearing, and maintaining PPE, aiming to promote a safety culture within the workplace. - Clear Signage and Communication: Install visible signage in working areas, highlighting the mandatory use of PPE during TIG welding operations and describing potential hazards associated with improper protection. - Supervision and Monitoring: Ensure constant supervision during TIG welding tasks, requiring workers to comply with safety regulations while providing assistance in case they encounter difficulties using their PPE. - Adequate Ventilation and Fume Extraction: Maintain proper ventilation in designated welding areas to disperse harmful gases and fumes effectively, minimising the risk of respiratory issues related to inadequate protective equipment. - Emergency Response Plan: Develop an emergency response plan outlining steps to take should there be an incident involving inadequate protection or improper fit of PPE during TIG welding activities, including first aid and reporting procedures. - Regular Safety Reviews: Perform periodic safety audits and hazard assessments to identify specific risks associated with lack of adequate protection, analyse trends, and implement continuous improvements to the enforced safety policies and protocols.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are needed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	<input type="checkbox"/>	<input type="checkbox"/>	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Name, signature, position and date signed of the person approving the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Specific personnel and qualifications, experience is noted in the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Provides a step-by-step process of tasks required to carry out the activity or task.	<input type="checkbox"/>	<input type="checkbox"/>	
Adequate risk assessment of any identified hazards has been completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Foreseeable hazards are identified and documented for each step.	<input type="checkbox"/>	<input type="checkbox"/>	
Any hazards listed in any site risk assessments have been added to the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	<input type="checkbox"/>	<input type="checkbox"/>	
Check control measures added to the SWMS are the most effective solutions.	<input type="checkbox"/>	<input type="checkbox"/>	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	<input type="checkbox"/>	<input type="checkbox"/>	
Permit requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	<input type="checkbox"/>	<input type="checkbox"/>	
SWMS identifies plant and equipment to be used.	<input type="checkbox"/>	<input type="checkbox"/>	
Details of inspection checks required for any equipment listed are noted on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Describes any mandatory qualifications, experience, training, skills required to perform the work.	<input type="checkbox"/>	<input type="checkbox"/>	
Applicable personal protective equipment is selected on the SWMS.	<input type="checkbox"/>	<input type="checkbox"/>	
Lists any required permits or licenses.	<input type="checkbox"/>	<input type="checkbox"/>	
Reflects and documents any legislative references and/or Australian Standards.	<input type="checkbox"/>	<input type="checkbox"/>	
Identifies any hazardous substances used with specific control measures in line with any SDS.	<input type="checkbox"/>	<input type="checkbox"/>
