Turf Laying | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Turf Laying

Business Name:	ABN:	SWMS#
Business Address:		
Contact Person:	Phone:	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, assess risk to communicate those hazards and then to further take steps to either eliminate or control each hazard.	
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.	
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.	
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters	☐ is carried out on or near pressurised gas mains or piping
☐ is carried out on a telecommunication tower	☐ is carried out on or near chemical, fuel or refrigerant lines
☐ involves demolition of an element of a structure that is load-bearing	☐ is carried out on or near energised electrical installations or services
☐ involves demolition of an element related to the physical integrity of structures	☐ is carried out in an area that may have a contaminated or flammable atmosphere
☐ involves, or is likely to involve, disturbing asbestos	☐ involves tilt-up or precast concrete
☐ involves structural alteration or repair that requires temporary support to prevent collapse	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
☐ is carried out in or near a confined space	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant
☐ is carried out in/near a shaft or trench deeper than 1.5 m or tunnel involving use of explosives	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

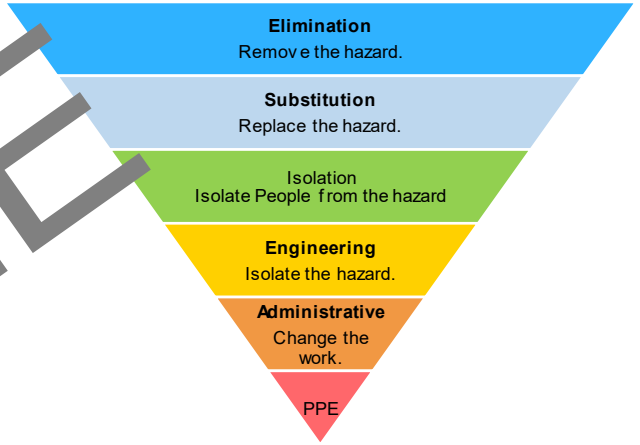
ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEE
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review befo work starts.
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	nitor and ke records

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferr en co lling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the most e tive, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Prote ve quipm) is the least effective method.

HEIRARCHY OF CONTROLS



PERS NAL P TECTIVE EQUIPMENT (PPE)

Select the appropriate PPE abo suitable for the equipment used or the job task being performed (if applicable).

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING TECTION	EY CTION	RESPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED

Other PPE Required:

Permit or Licenses Requirements	Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Site Preparation	Manual handling injuries, Equipment misuse	2M	- Conduct manual handling training for all workers to educate them on proper lifting techniques and equipment use. - Use mechanical aids such as wheelbarrows or trolleys wherever possible to minimise manual handling of heavy turf rolls. - Perform a pre-start safety briefing focusing on the specific equipment to be used, outlining correct handling methods and operational procedures. - Ensure all equipment is checked for maintenance issues before commencement of work, and regularly serviced per manufacturer guidelines. - Designate clear signage around the site preparation area to warn of potential hazards like moving machinery. - Implement a buddy system for tasks involving particularly heavy or cumbersome loads to ensure no individual is overstrained. - Provide personal protective equipment (PPE) including gloves, knee pads, and sturdy footwear to protect against bruises, strains, and cuts. - Arrange for regular rest breaks to prevent fatigue-related injuries, ensuring workers have time to recover during physically demanding tasks. - Establish stretching programs before starting the work to reduce muscle stiffness and increase flexibility among workers. - Develop a clear communication protocol amongst team members to effectively manage the handover of tools and materials in a safe manner. - Ensure all workers are aware of emergency procedures and locations of first aid kits and facilities.	1L
2. Material Unloading	Falling objects from truck, Slips and trips around vehicle	3H	- Conduct a pre-start safety briefing and ensure all personnel are aware of the unloading procedures and designated roles. - Designate a competent person to oversee the unloading process, who is trained in load securing techniques and familiar with the specific types of materials being handled. - Use exclusion zones around the truck during unloading to keep non-essential personnel away from potential hazard areas. - Implement physical barriers or signage to clearly mark these exclusion zones. - Ensure the truck is parked on stable, level ground to prevent sudden movements that could lead to falling objects. - Engage the handbrake and use wheel chocks to secure the truck before starting the unloading process. - Require workers to wear appropriate personal protective equipment (PPE), including hard hats, high visibility vests, and sturdy footwear to protect against falling objects and slips.	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Inspect all materials for stability and securement before unloading begins; adjust securing methods if necessary to ensure safety. - Use mechanical aids such as forklifts or cranes wh[illegible]never possible to reduce manual handling and minimise the risk of injuries from falling objects. - Train workers in proper lifting techniques and the use of [illegible]y mechanical aids involved in the unloading process. - Conduct regular maintenance checks on all m[illegible]hanical aids to ensure they are safe and operational. - Implement housekeeping m[illegible]sures to keep the [illegible]loadin[illegible]rea free from debris, spills, or other slip/trip hazards. - Establish clear c[illegible]mun[illegible]tion m[illegible]ods among team members during unloading, using two-way radios or agreed ha[illegible]signals. - Review and [illegible]date the [illegible]WMS as n[illegible]ssary to address new risks or changes in the work process.	
3. Surface Levelling	Struck by machine[illegible] Nois[illegible]duc[illegible] hearing loss	2M	- Use [illegible]ac[illegible]nery th[illegible]s equipped with noise reduction technology to minimise exposure to loud sounds. - Provid[illegible]per[illegible]nal pro[illegible]ctive equipment (PPE), including earplugs or earmuffs, to all workers to protect against [illegible]oise-[illegible]duced hearing loss. - C[illegible]ud[illegible]egular maintenance on all machinery to ensure it is operating safely and efficiently, reducing the risk[illegible]ccidents. - [illegible]plement exclusion zones around operating machinery to keep workers at a safe distance and prevent them from being struck. - Ensure all workers are properly trained on the operation and safety features of machinery used for surface levelling. - Display clear signage warning of noise hazards and machine operation areas, ensuring workers are aware of potential risks. - Conduct a risk assessment prior to starting work to identify any additional hazards specific to the worksite or conditions of the day. - Monitor noise levels routinely to ensure they do not exceed safe exposure limits as set by relevant workplace health and safety regulations. - Brief workers daily on the importance of using PPE and adhering to safety measures when in the vicinity of operating machinery. - Provide workers with breaks away from noise sources to reduce overall exposure to hazardous noise levels. - Rotate tasks among workers to minimise each individual's duration of exposure to both noise and the risks associated with machinery operation.	1L
4. Soil Assessment	Chemical exposure, Biological hazards from soil	2M	[redacted]	1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	☒	
All relevant personnel consulted during the development of the SWMS.	☒	
Name, signature, position and date signed of the person approving the SWMS.	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☒	
Provides a step-by-step process of tasks required to carry out the activity or task.	☒	
Adequate risk assessment of any identified hazards has been completed.	☒	
Foreseeable hazards are identified and documented for each step.	☒	
Any hazards listed in any site risk assessments have been added to the SWMS.	☒	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	☒	
Check control measures added to the SWMS are the most effective solutions.	☒	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	☒	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	☒	
SWMS identifies plant and equipment to be used	☒	
Details of inspection checks required for any equipment listed are noted on the SWMS.	☒	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	☒	
Applicable personal protective equipment is selected on the SWMS.	☒	
Reflects and documents any legislative references and/or Australian Standards.	☒	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☒
