

Using Hydraulic Lifts In Vehicle	e Repairs. SAFE WORK N	METHOD STATEMENT (SWI	MS)
TASK OR ACT	IVITY: Using Hydraulic Lifts In V	ehicle Repairs.	
Business Name:		ABN:	SWMS#
Business Address:			
Contact Person:	Phone:	E qil:	
THIS SAFE WORK METHOD	STATEMENT IS APPROVID BY	THE PC VOF TP' ROJECT	
Under the Work Health and Safety Regulation (WHS Regulation), a person conduthe proposed work starts.		required to elect that a safe work method	statement (SWMS) is prepared before
Full Name:			
Signature:	MY	Title:	Date:
Details of the person(s) responsible for ensuring implementation, monitoring	compliant a of the SWIL as well as re	eviews and modifications of the SWMS.	
Full Name:		Title:	Phone:
ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS VMS HAVE THE FOLLOWING COMMUNICATED	NA. 2 OF ALL RELEVANT PERSONN EVELOPMENT AND APPROVAL OF	IEL WHO HAVE BEEN CONSULTED AND THIS SWMS	COMMUNICATED TO IN THE
Safety meetings or toolbox talks will be sched ed in according with regislative requirements to first identify any site hazards, to continue the those hazards and then to further take steps to either eliminate or continue to the result of the results of the res			
If an incident or a near miss occurs, all work must standardly. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Slip, trip and fall hazards, incorrect use of equipment	зн	 Ensure all workers have received training on the safe use of hydraulic lifts and are familiar with safety protocols specific to vehicle repairs. Conduct a thorough inspection of the hydrau lift perore use, checking for any signs of damage or wear, and ensure it is regularly maintained according of manufacture guidelines. Clear the work area of clutter and debris to preven slips usps, and falls, ensuring adequate lighting to identify potential hazarda. Implement signage and regions are und the work zone to alert others of the ongoing activity and restrict access to according of personal protects requipment, such as non-slip footwear, gloves, and eye prote is work all workers involved in the task. Verify the the load vehicle) is within the capacity limits of the hydraulic lift and distributed evenly to maintain startly durn diffting operations. Itilise the ellor cks and stabilisation tools to secure the vehicle and prevent any unintended movement with element and update the risk assessment and safe work method statements to incorporate new controls or address changing work conditions. Keep emergency procedures and contact numbers readily accessible, with all workers informed of their roles and responsibilities in case of an incident. Establish a clear plan for safely lowering the vehicle, ensuring that no one is underneath the lift during descent and that all equipment is removed from the area. 	1L
2. Positioning Vehicle on Lift	Risk of vehicle falling off lift, back injury from improper lifting	ЗН	 Ensure all workers are trained in proper use and positioning of hydraulic lifts and have completed a verification of competency assessment. Conduct a pre-use inspection of the lift to identify any wear, damage, or malfunction that could pose a risk. Position the vehicle centred on the lift according to manufacturer's instructions, utilising appropriate jacking points and equipment configurations for the specific make and model. Verify that the lift's weight capacity exceeds the vehicle's total weight, taking into account any additional loads or modifications to the vehicle. Utilise wheel chocks on both sides of at least two tyres to prevent movement during lifting and while elevated. Engage the lift locks once the vehicle is suspended to eliminate the threat of sudden descent due to hydraulic failure. 	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Ensure the lift area is clear of any obstructions or loose items that might interfere with operation or pose tripping hazards.	
			- Use guide cones or markers to aid in precisely uning the vehicle over the lift.	
			- Clearly communicate lift procedures and signals among team members to ensure coordinated and safe operations.	
			- Implement a buddy system where an addition by the reconfirms that the vehicle is correctly aligned and secured before activation of the lift.	
			- Regularly maintain hydraulic its according to the anufacturer's schedule and keep detailed records of inspections and maintenance tivities.	
			- Ensure the graulic lift is gularly spectra and maintained according to the manufacturer's guidelines to prevent equipment fail by.	
			- Training person the one correct operation of hydraulic lifts and the importance of using safety precaulic while erating them.	
			- Positing say by barry or cones around the work area to prevent unauthorised entry and reduce the risk of accidents.	
			- arly bello limits on the lift, and always adhere to these limits to prevent overloading and potential	
Operating Hydraulic Lift	Crushing or trapping of body parts, equipment failure	4A	nstall regundant systems, like mechanical locks or pins, which can support the vehicle in case of h, raulic system failure.	2M
Liit			Require the use of personal protective equipment such as gloves and steel-toed boots to protect against crushing injuries.	
			- Develop and enforce standard operating procedures that include a checklist to follow prior to engaging the lift, ensuring all safety measures are observed.	
			- Implement a buddy system where at least two people are present during operation to assist in monitoring safety and responding quickly to emergencies.	
			- Ensure the work environment is free of obstructions and debris to maintain clear access around the vehicle and lift.	
			- Regularly conduct safety drills and simulations to prepare staff for potential lift failures or emergencies and ensure they know how to react appropriately.

EMERGENCY RESPONSE - CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK IN 'THIS 'S' ITEM ON MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remain effect, and must be reviewed (and revised if necessary) if relevant control measures are revised. The view as should be carried out in consultation with workers (including contractors as unputractors of the SWMS and their health and safety registeratives who represented that work group at the workplace.

When the SWMS has been revised the PCBD mest ensure the all persons involved with the work are advised that a revision has been made and how they can accept the revised SWMS, including all persons who will need to change a work procedure or system as a rest of the review are advised of the changes in a way that will enable them to implement their duties the total with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- Spot Checks.
- Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.		
All relevant personnel consulted during the development of the SWMS.		
Name, signature, position and date signed of the person approving the SWMS.		
Specific personnel and qualifications, experience is noted in the SWMS.	7	
Provides a step-by-step process of tasks required to carry out the activity or task.		
Adequate risk assessment of any identified hazards has been completed.		
Foreseeable hazards are identified and documented for each step.		
Any hazards listed in any site risk assessments have been added to the SV 5.		
SWMS initial risk (IR) column as well as residual risk (RR) column ampleted.		
Check control measures added to the SWMS are the most effer ve secutions.		
Responsible person is assigned and listed on the splenetation of control measures.		
Permit or licenses requirements specified, so n as Hot Work, Electral Work, Work at Heights etc.		
SWMS identifies plant and equipment to be		
Details of inspection checks required for any equipment lister are noted on the SWMS.		
Describes any mandatory qualifications, experience, and or skills required to perform the work.		
Applicable personal protective equipment is selected on the SWMS.		
Reflects and documents any legislative references and/or Australian Standards.		
Identifies any hazardous substances used with specific control measures in line with any SDS.
