Vehicle Loading Crane | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Vehicle Loading Crane

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

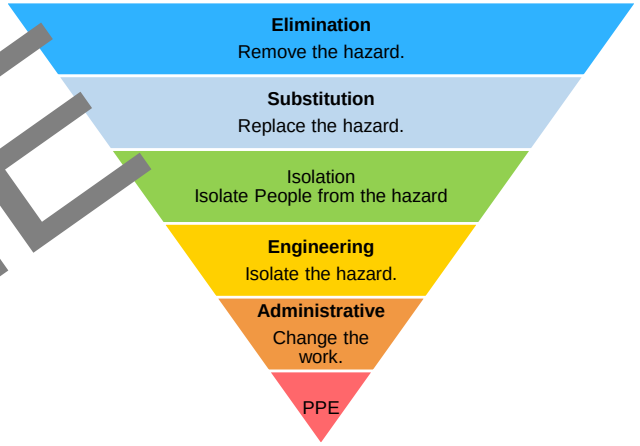
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Falling objects, hand injuries	3H	- Inspect the vehicle and crane for any sign of damage, wear, or malfunction before use. This should include checking all components, such as chains, slings, and hooks. - Ensure that a risk assessment is conducted prior to work commencement to identify potential hazards and determine appropriate control measures. - Train all workers involved in the vehicle loading crane operation on proper handling techniques and safety procedures according to manufacturer guidelines and recommendations. - Implement a clear communication plan among workers, including use of hand signals, radios, or other designated methods to reduce misunderstandings and prevent accidents during the loading process. - Keep the work area clear and free from debris or obstacles that may pose trip or slip hazards for personnel. - Designate specific areas for workers and bystanders to stand away from the loading zone to prevent unnecessary exposure to falling objects. - Encourage workers to wear appropriate personal protective equipment (PPE), such as safety boots, gloves, hard hats, and high-visibility jackets, to minimise the risk of injury. - Use suitable load restraint systems compatible with the specific loads being handled, ensuring they are properly secured and tightly fastened to prevent movement during transportation. - Establish proper exclusion zones surrounding the loading area to keep untrained people and unauthorised individuals away from potential hazards. - Perform regular maintenance checks on the lifting equipment and replace any damaged or worn parts as needed. - Appropriately secure loose items within the loading area to prevent shifting during transport and ensure the appropriate weight distribution. - Limit manual handling of heavy or awkward loads when possible, using appropriate mechanical aids or additional personnel when necessary. - Monitor weather conditions and avoid working in extreme weather, such as high winds or rain, that may increase the likelihood of slipping or create unstable conditions for the operation. - Review workplace procedures regularly and update them as needed to maintain effective hazard management and ensure continued worker safety during vehicle loading crane operations.	2M	
2. Inspection	Slip and trip hazards, poor visibility	2M	- Ensure the worksite is clean and free from any potential slip and trip hazards, such as debris, loose materials, or uneven surfaces.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Conduct a thorough inspection of the Vehicle Loading Crane before every use to identify any issues or malfunctions that could contribute to slip and trip hazards. - Clearly mark any hazards in the working environment with warning signs or barriers to prevent workers from accidentally unknowingly entering dangerous areas. - Require all workers in the area to wear appropriate personal protective equipment (PPE), such as non-slip footwear and high-visibility clothing, to minimise the risk of slips and trips and to improve visibility. - Implement effective communication systems among workers, such as two-way radios, to ensure that all team members are aware of any existing or emerging hazards. - Schedule loading and unloading operations during daylight hours if possible, to maximise visibility and reduce the risk of accidents caused by poor lighting conditions. - If work must be carried out during low light conditions, provide adequate artificial lighting sources to illuminate the working area, and ensure that these are maintained regularly. - Conduct regular training sessions on workplace health and safety, including proper lifting techniques and hazard awareness, to ensure all workers are familiar with best practices for minimising the risks associated with loading operations. - Develop and implement a consistent maintenance schedule for the Vehicle Loading Crane and other machinery or equipment to ensure they remain in good, safe working condition. - Regularly review and update the Safe Work Method Statement (SWMS) to reflect any changes in procedures, equipment, or personnel involved in the loading process. - Encourage workers to report any identified hazards or near-miss incidents immediately, so that corrective action can be taken to prevent future accidents. - Assign a designated safety officer to each shift whose primary responsibilities include monitoring compliance with safety protocols, identifying hazards, and addressing any issues that arise during Vehicle Loading Crane operations. - Conduct regular safety briefings and toolbox talks to keep workers informed about potential hazards, new precautionary measures, and recent incidents or accidents in the workplace, emphasising the importance of maintaining a safe work environment.		
3. Setup	Improper equipment setup, electrical hazards	3H	- Before setting up the vehicle loading crane, conduct thorough equipment inspection to ensure all parts and components are in good working condition, with no visible damage or missing pieces. - Make sure workers are adequately trained and competent in the proper operation and setup of the vehicle loading crane, including load safety limits.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Adhere to the manufacturer's guidelines for safe and appropriate use of the equipment, following correct procedures for installation, erection, and dismantling. - Ensure sufficient space with no obstructions is available for proper setup and maneuvering of the vehicle loading crane, taking into consideration its operating radius and associated hazards such as overhead power lines. - Establish clear communication channels between the crane operator, supervisor, and workers involved in the loading process; consider using hand signals, two-way radios, or designated spotters to maintain constant communication throughout the operation. - Conduct a thorough assessment of ground conditions, ensuring it is level, stable, and has adequate load-bearing capacity before beginning vehicle loading crane setup. - Implement measures to control electrical hazards by maintaining minimum safe distances from overhead powerlines and identifying potential sources of electrical interference during equipment setup. - Use suitable personal protective equipment (PPE) including hard hats, gloves and high-visibility clothing to reduce potential injury-related risks while on the work site. - Install and engage appropriate stabilizers or outriggers according to manufacturer requirements to enhance the stability and balance of the crane during operation. - Regularly reassess environmental conditions and adjust risk control measures accordingly, accounting for factors such as rain, wind, and other adverse weather conditions that could compromise worker safety or equipment performance. - Develop an emergency response plan to address any unexpected incidents or situations that may arise during the setup process, including documented protocols for rescue and evacuation procedures. - Encourage ongoing communication and feedback amongst the workers involved in the setup process, promoting a culture of safety where potential hazards or concerns can be promptly addressed and mitigated.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
