Welding | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Welding

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:	
Project Manager:	
Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-be	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrit of a stru	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing as stos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that re mporar upp to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

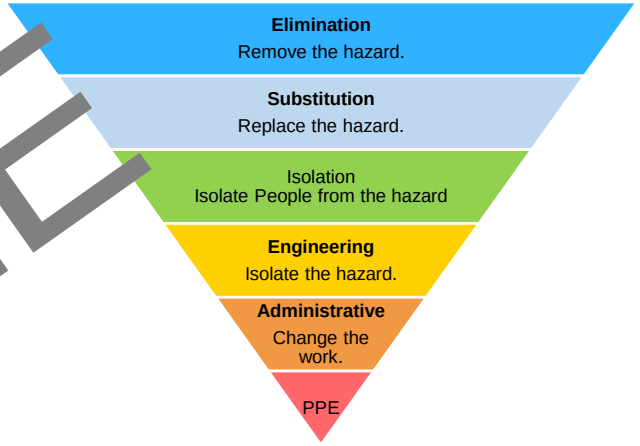
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost e ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Trip hazards, Exposed electrical cables	2M	- Clear and designate a specific area for welding activities to keep the workspace organised and prevent any trip hazards from occurring. - Conduct regular inspections of the worksite to ensure all potential hazards are identified, reported, and managed promptly. - Mark all exposed electrical cables in the welding area with visible warning signs and make sure workers are aware of their presence. - Ensure that all cords and cables used in the welding process are secured and routed in a way that minimises the risk of tripping or interfering with other tasks. - Provide adequate lighting within the workspace so that potential hazards can be quickly spotted and addressed. - Organise the workspace to minimise clutter or obstructions that may pose potential trip hazards or impede workers' ability to safely conduct their tasks. - Adopt best practices for storing and handling welding equipment and materials, such as coiling cables and hoses to avoid tangles and maintaining an orderly storage system. - Ensure all employees involved in welding tasks have received proper training regarding workplace health and safety procedures, including the identification and mitigation of trip hazards and proper management of exposed electrical cables. - Implement a buddy system, where workers check each other's workspaces for hazards before starting their tasks in order to increase awareness and maintain a safe working environment. - Develop and enforce clear procedures for addressing hazards when they arise, such as reporting them to supervisors and immediately fixing or isolating issues. - Make use of cable protectors or covers to safeguard exposed wiring and reduce the risk of accidental trips, falls or electric shocks. - Encourage open communication among workers and supervisors about potential risks, allowing everyone to stay well-informed and actively participate in creating a safer working environment. - Provide Personal Protective Equipment (PPE) suitable for welding tasks, such as toe-capped boots for tripping protection and insulated gloves for handling electrical cables. - Periodically review the implemented control measures to ensure their effectiveness and adjust them as needed to maintain a safe workspace for all welding activities.	1L	
2. Welding equipment setup	Incorrect or damaged equipment, Inadequate workspace	3H	- Conduct pre-use inspections: Regularly inspect welding equipment to ensure it is in proper working condition and free of defects. Replace or repair any damaged parts before beginning work.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Implement regular equipment maintenance: Schedule routine maintenance checks for all welding equipment, in compliance with manufacturer guidelines, to increase the longevity of tools, reduce breakdowns and avoid unexpected hazards. - Enforce proper training: Ensure that personnel who set up and operate welding equipment have undergone professional training and demonstrated competency in handling devices safely and efficiently. - Provide adequate workspace: Ensure that there is ample space allocated around the welding station for safe movement and accessibility for personnel, including enough distance from other activities and stored materials. - Designate designated welding zones: Clearly mark areas where welding activities are taking place, using high visibility signs, floor markings, or barricades. Restrict access to only trained staff for equipment setup and operation. - Ensure proper ventilation: Make sure ventilation systems are in place to control fumes, smoke, and dust created by the welding process. Proper airflow helps to limit exposure to potentially harmful substances and promotes a healthier workspace. - Establish emergency protocols: Prepare for potential accidents by developing detailed emergency response procedures, ensuring all relevant staff members are familiar with these plans. - Implement lockout/tagout procedures: Adhere to established lockout/tagout procedures when setting up, maintaining, or troubleshooting welding equipment to protect workers from accidental equipment start-ups or energy releases. - Use correct personal protective equipment (PPE): Provide appropriate PPE, such as safety glasses, heat-resistant gloves, and welding helmets, for all personnel involved in welding equipment setup or welding tasks. - Store non-essential tools and materials away from the workspace: Clean and declutter the welding area to minimise the risk of trip and fall hazards, electrical hazards, or other incidents due to cluttered surroundings.		
3. PPE verification	Inappropriate or damaged PPE, Untrained personnel	2M	- Regular inspections: Implement thorough and periodic checks of all Personal Protective Equipment (PPE) to ensure they are in proper working condition, free from any damage or defects. - Correct PPE selection: Ensure that appropriate PPE is being used for the specific welding task, including eye protection, gloves, non-flammable clothing, and respiratory protection when needed. - Fit testing: Conduct fit tests for items like safety glasses, goggles, and helmets to verify proper sizing and a secure fit, minimising the risk of injury. - Training and education: Provide comprehensive training sessions on the proper use, maintenance, and storage of each piece of PPE to all personnel involved in welding tasks. - Visible workplace signage: Place clear and easily readable signs indicating the areas where PPE must be worn at all times.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Supervision: Closely monitor welding activities and ensure that workers are wearing the required PPE throughout their tasks. - Access to replacement PPE: Maintain a stockpile of spare PPE on-site so that any damaged equipment can be efficiently replaced as needed. - Job Safety Analysis (JSA): Carry out a JSA before commencing any welding activities to identify potential hazards and establish appropriate control measures, including the verification of proper PPE usage. - Incident reporting system: Establish a robust process for reporting accidents or near-misses relating to the improper use of PPE, ensuring quick intervention and enforcement of necessary corrective actions. - Conduct regular toolbox talks: Engage in open discussions with welding personnel about the importance of wearing appropriate PPE, sharing lessons learned from past incidents, and promoting a safety-minded culture within the workplace. - Internal audits: Undertake periodic internal audits to verify compliance with the SWMS and applicable safety regulations, ensuring that PPE verification procedures are adhered to, and addressing any identified shortcomings immediately.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti[illegible]ions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im[illegible]of cont[illegible]measures.	☐	☐	
Permit requirements specified, such as Hot Wor[illegible]Electrical Work, W[illegible]t Heights etc.	☐	☐	
SWMS identifies plant and equipment to be u[illegible].	☐	☐	
Details of inspection checks required for any equipment listed a[illegible]noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training[illegible]skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
