Working Around Water Bodies | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Working Around Water Bodies

Business Name:		ABN:	SWMS#
Business Address:			
Contact Person:	Phone:	Email:	

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THIS PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, assess risk to communicate those hazards and then to further take steps to either eliminate or control each hazard.	
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.	
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.	
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters	☐ is carried out on or near pressurised gas mains or piping
☐ is carried out on a telecommunication tower	☐ is carried out on or near chemical, fuel or refrigerant lines
☐ involves demolition of an element of a structure that is load-bearing	☐ is carried out on or near energised electrical installations or services
☐ involves demolition of an element related to the physical integrity of structures	☐ is carried out in an area that may have a contaminated or flammable atmosphere
☐ involves, or is likely to involve, disturbing asbestos	☐ involves tilt-up or precast concrete
☐ involves structural alteration or repair that requires temporary support to prevent collapse	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor
☐ is carried out in or near a confined space	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant
☐ is carried out in/near a shaft or trench deeper than 1.5 m or tunnel involving use of explosives	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY

RISK MATRIX

LIKELIHOOD	INSIGNIFICANT	MINOR	MODERATE	MAJOR	CATASTROPHIC	SCORE	ACTION
ALMOST CERTAIN	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4 ACUTE		
LIKELY	2 MODERATE	3 HIGH	3 HIGH	4 ACUTE	4 ACUTE	4A ACUTE	DO NOT PROCEE
POSSIBLE	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	4 ACUTE	3H HIGH	Review befo work starts.
UNLIKELY	1 LOW	1 LOW	2 MODERATE	3 HIGH	4 ACUTE	2M MODERATE	Ensure control measures in place.
RARE	1 LOW	1 LOW	2 MODERATE	3 HIGH	3 HIGH	1L LOW	nitor and ke records

Notes on Hierarchy of Controls: Elimination methods are the most effective and preferr en co lling a hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the most e tive, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Prote ve quipm) is the least effective method.

Permit or Licenses Requirements	Mandatory Qualifications and Training

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Lack of safety awareness, Improper PPE usage	2M	- All personnel should be provided with comprehensive safety training that addresses the specific risks and precautions of working around water bodies. - Ensure there is a well-communicated emergency plan in place, including evacuation procedures. - Personnel should have access to and must use appropriate personal protective equipment (PPE) such as life jackets, waterproof clothing, and slip-resistant shoes. - Adequate signage should be installed to indicate the hazard areas near the water body. - Regular inspections of the work area should occur to ensure it remains safe and secure. - Encourage constant communication among team members in the case of changing conditions or emergent hazards. - Each worker should know their role in the safety process and take accountability for the safety of themselves and their fellow employees. - Workers should never work alone near a water body; always apply a buddy system for monitoring and assistance if needed. - Always follow the manufacturer's instructions when operating machinery or heavy equipment near water bodies to ensure safe use. - Limit or restrict work during inclement weather conditions that could enhance the risk of accidents or distress near water bodies. - Provide regular breaks to avoid worker fatigue, which can lead to impaired judgment or decreased focus, increasing the risk of accidents near water.	1L
2. Site Assessment	Slips, trips and falls, Snake and insect bites	3H	- Proper signage: Ensure signboards are strategically placed around the work site to warn workers about potential hazards related to slip and fall, or possible snake and insect bites. - Clean workspace: Regularly clean up any debris or objects that might cause a worker to trip or fall. - Protective clothing: It is essential all workers wear appropriate PPE gear such as high visibility vests, steel-toed boots, gloves, etc., to prevent from falls and to reduce the damage from animal bites. - Comprehensive training: Workers should be thoroughly trained on identifying potentially hazardous areas and taking preventive steps accordingly. - Implement safety standards: Adhere to strict health and safety standards issued by respective Australian authorities to minimise accidents at the workplace. - Dress code: Encourage workers to cover as much skin as possible to lower the risk of insect and snake bites. - Emergency medical kit: Keep a well-prepared first aid kit easily accessible at the site for emergency situations.	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
			- Regular Inspections: Carry out regular inspections of the site to identify any potential hazards which could lead to slips, trips, and falls. - Barrier installation: Install barriers around water bodies to prevent accidental falls into them. - Surveillance systems: Implement security cameras to monitor the worksite continuously and take quick action in case of any mishap. - Snake and insect repellents: Use specific chemical solutions to keep snakes and insects away from your working area. - Local wildlife knowledge: Ensure workers have knowledge about local snakes and insects along with treatment methods for bites. - Emergency contact numbers: Maintain an updated list of emergency phone numbers, including nearest medical facilities, available onsite.	
3. Equipment Setup	Inadequate equipment, Electrical issues	3H	- Regular Safety Inspections: Ensure all equipment is checked for any signs of wear and tear before use. - Use of Adequate Equipment: Make sure the equipment used is designed or deemed adequate for work around water bodies. - Electrical Safety Checks: Conduct routine checks on electrical systems to ensure they are working optimally with no faults that could lead to accidents. - Training Workers: Ensure all workers are properly trained on handling the equipment before commencing the task. - Emergency Action Plan: Develop and communicate a clear emergency plan in case an accident occurs. - Personal Protective Equipment (PPE): Provide suitable PPE such as waterproof clothing, safety boots and gloves to protect against electrical issues. - Continual Supervision: Monitor onsite works constantly to anticipate any potential hazards. - First Aid: Having accessible and well-stocked first aid kits in close proximity. - Rescue Equipment: Ensure rescue and recovery equipment are available at all times during periods of operation. - Power Isolation: Isolate power sources when equipment is not in use to prevent accidental startup and shocks. - Safe System of Work: Implement a safe system of work that includes secure installation and anchorage of equipment. - Regular Breaks: Encourage workers to take regular breaks to avoid fatiguen - Weather Considerations: Due consideration for weather conditions - rain may increase risk of slips, electrical problems, as well as equipment malfunction.	1L
4. Water Sampling	Falling into water, Eye irritation from water splash	2M	[redacted]	1L

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature	Date

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	COMMENTS
The company details have been entered, including the project name and address.	☒	
All relevant personnel consulted during the development of the SWMS.	☒	
Name, signature, position and date signed of the person approving the SWMS.	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☒	
Provides a step-by-step process of tasks required to carry out the activity or task.	☒	
Adequate risk assessment of any identified hazards has been completed.	☒	
Foreseeable hazards are identified and documented for each step.	☒	
Any hazards listed in any site risk assessments have been added to the SWMS.	☒	
SWMS initial risk (IR) column as well as residual risk (RR) column completed.	☒	
Check control measures added to the SWMS are the most effective solutions.	☒	
Responsible person is assigned and listed on the SWMS for the implementation of control measures.	☒	
Permit or licenses requirements specified, such as Hot Work, Electrical Work, Work at Heights etc.	☒	
SWMS identifies plant and equipment to be used	☒	
Details of inspection checks required for any equipment listed are noted on the SWMS.	☒	
Describes any mandatory qualifications, experience, training or skills required to perform the work.	☒	
Applicable personal protective equipment is selected on the SWMS.	☒	
Reflects and documents any legislative references and/or Australian Standards.	☒	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☒
