

Working in Contaminated or Potentially Contaminated Areas | SAFE WORK METHOD STATEMENT (SWMS) TASK OR ACTIVITY: Working in Contaminated or Potentially Contaminated Areas **Business Name:** ABN: SWMS# **Business Address:** Contact Person: Phone: THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PC. OF THE PROJECT that a safe work method statement (SWMS) is prepared before Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or und U) is required to e the proposed work starts. Full Name: Title: Date: Signature: SWI Details of the person(s) responsible for ensuring implementation, monitoring compliar as well as reviews and modifications of the SWMS. Full Name: Title: Phone: ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS WMS NA. 2 OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE HAVE THE FOLLOWING COMMUNICATED **PEVELOPMENT AND APPROVAL OF THIS SWMS** Safety meetings or toolbox talks will be schedled in according e with egislative requirements to first identify any site hazards nuni te those hazards and then to further take steps to either eliminate or con I each hazard. diately. Depending If an incident or a near miss occurs, all work must six on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity. Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel. The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.

SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
1. Preparation	Exposure to contaminants, Lack of PPE	ЗН	 Conduct a comprehensive site assessment to identify potential contaminants and associated risks. Develop a contamination management plant etailing specific procedures and control measures for the site. Ensure all personnel are to ned in hazardous obstances careness and emergency response procedures. Determine and procedure personal protecute equipment (PPE) based on the identified contaminants. Establish at less control or limit en uto contaminated areas to only authorised and properly equipped person el. Implicate decomplication procedures for personnel, tools, and equipment leaving the contaminated area. Displanclea signage odicating the presence of contaminants and required PPE for entry. Grange for regular monitoring of air quality and contaminant levels within the work area. Estant a communication protocols for reporting and responding to contaminant exposure incidents. Grovide facilities and supplies for hand-washing and decontamination near entry and exit points. Use impermeable barriers or containment systems to prevent the spread of contaminants. Schedule regular health checks and medical surveillance for workers exposed to contaminants. Review and update safety data sheets (SDS) for all hazardous substances present on-site. Coordinate with relevant environmental authorities for guidance on handling and disposal of contaminants. 	2M
2. Site Assessment	Unidentified hazards, Inaccurate risk assessment	4A	 Conduct comprehensive site history reviews to identify previous uses and potential contaminants. Engage qualified environmental consultants to carry out preliminary assessments and identify potential hazards. Utilise advanced detection equipment to accurately identify contaminants on site. Require soil, air, and water sampling by trained professionals to determine the type and level of contamination present. Develop a detailed site map indicating known contaminated zones and access points for safe navigation. Implement pre-entry meetings to discuss known risks and control measures with all personnel. Use visual and physical barriers like signage and fencing to demarcate contaminated areas. Establish strict access controls to limit entry to authorised personnel only. 	2M

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK
		TRIOR	- Provide comprehensive training on hazard identification and risk assessment techniques for all workers.	TTIOIT
			- Incorporate regular updates to the site assessment based on new findings or changes in environmental conditions.	
			- Maintain open communication channels with socal health and environmental authorities for guidance and updates on regulatory requirements.	
			- Perform systematic reviews and continuous and continuous priming of the site condition to identify emerging hazards promptly.	
			- Conduct comprehensive site assessments to identical contaminants and hazards. - Consult with common aspectists to obtain expert advice on known contamination in the area.	
			- Implement sk assess ant proce to sematically evaluate identified hazards.	
			- De and by vide scific training sessions for workers focusing on hazard recognition and safe work pract. Leading after a sessions for workers focusing on hazard recognition and safe work pract.	
			- Regularly date a "creview training programs to include the latest safety standards and hazard information."	
			tilise car signinge at the site to warn workers and visitors of potential contamination hazards.	
Hazard Identification	Overlooking hazards, Insufficient training		Ens. at personal protective equipment (PPE) is available and appropriate for the identified ontaming its.	2M
			- tablish communication protocols to report and address overlooked hazards promptly.	
			Use checklists during site evaluations to ensure all potential hazards are considered and documented.	
			- Assign responsibilities to qualified personnel for managing risk assessments and safety compliance.	
			- Encourage worker participation in hazard identification through feedback sessions and safety meetings.	
			- Simulate emergency response drills focusing on incidents involving contamination to enhance preparedness.	
			- Document and communicate any changes in site conditions or discovered contaminants to all personnel immediately.	
			- Incorporate learnings from past incidents and near-misses into current hazard identification and control processes.	
4. PPE Selection	Incorrect PPE choice, PPE malfunction	3H		1L

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

Worker Name	Signature		Date

SAFE WORK IN 'THIS 'S' ITEM ON MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remain effect, and must be reviewed (and revised if necessary) if relevant control measures are revised. The view as should be carried out in consultation with workers (including contractors as unputractors of the SWMS and their health and safety registeratives who represented that work group at the workplace.

When the SWMS has been revised the PCBD mest ensure the advised that a revision has been made and how they can accept the revised SWMS, including all persons who will need to change a work procedure or system as a rest of the review are advised of the changes in a way that will enable them to implement their duties the theoretical with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

- Spot Checks.
- Consultation with workers, contractors and sub-contractors.
- 3. Internal audits on a continual basis

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.
