Working in Hot Conditions - Outdoors | SAFE WORK METHOD STATEMENT (SWMS)

TASK OR ACTIVITY: Working in Hot Conditions - Outdoors

Business Name: [Company Name]	ABN: [ABN]	SWMS#
Business Address: [Company Address]		
Contact Person:	Phone: [Phone]	Email:

THIS SAFE WORK METHOD STATEMENT IS APPROVED BY THE PCBU OF THE PROJECT

Under the Work Health and Safety Regulation (WHS Regulation), a person conducting a business or undertaking (PCBU) is required to ensure that a safe work method statement (SWMS) is prepared before the proposed work starts.

Full Name:		
Signature:	Title:	Date:

Details of the person(s) responsible for ensuring implementation, monitoring and compliance of the SWMS as well as reviews and modifications of the SWMS.

Full Name:	Title:	Phone:

ALL PERSONNEL PARTICIPATING IN ANY ACTIVITY ON THIS SWMS MUST HAVE THE FOLLOWING COMMUNICATED	NAME AND DATED SIGNATURE OF ALL RELEVANT PERSONNEL WHO HAVE BEEN CONSULTED AND COMMUNICATED TO IN THE DEVELOPMENT AND APPROVAL OF THIS SWMS		
	NAME	SIGNATURE	DATE
Safety meetings or toolbox talks will be scheduled in accordance with legislative requirements to first identify any site hazards, secondly to communicate those hazards and then to further take steps to either eliminate or control each hazard.			
If an incident or a near miss occurs, all work must stop immediately. Depending on the severity of the incident, a meeting will be called with all workers to amend the SWMS if required. The meeting may also be an educational opportunity.			
Any changes made to the SWMS after an incident or a near miss must be approved by the Person Conducting Business or Undertaking and communicated to all relevant personnel.			
The SWMS must be kept and be available for inspection at least until the work is completed. Where a SWMS is revised, all versions should be kept. If a notifiable incident occurs in relation to which the SWMS relates, then the SWMS must be kept for at least two years from the occurrence of the notifiable incident.			

CLIENT OR PRINCIPAL CONTRACTOR DETAILS	
Client:	SCOPE OF WORKS
Project Name:	Provide a detailed description of the specific work being carried out (otherwise known as a scope of works).
Project Address:

Contact Phone:	
Project Manager Signature:	
Date SWMS supplied to Project Manager:	

ANY HIGH-RISK CONSTRUCTION WORK BEING CARRIED OUT	
☐ involves a risk of a person falling more than 2 meters.	☐ is carried out on or near pressurised gas mains or piping.
☐ is carried out on a telecommunication tower.	☐ is carried out on or near chemical, fuel or refrigerant lines.
☐ involves demolition of an element of a structure that is load-bearing.	☐ is carried out on or near energised electrical installations or services.
☐ involves demolition of an element related to the physical integrity of a structure.	☐ is carried out in an area that may have a contaminated or flammable atmosphere.
☐ involves, or is likely to involve, disturbing asbestos.	☐ involves tilt-up or precast concrete.
☐ involves structural alteration or repair that requires temporary support to prevent collapse.	☐ is carried out on, in or adjacent to a road, railway, shipping lane or other traffic corridor.
☐ is carried out in or near a confined space.	☐ is carried out in an area of a workplace where there is any movement of powered mobile plant.
☐ is carried out in/near a shaft or trench deeper than 1.5m or tunnel involving use of explosives.	☐ is carried out in areas with artificial extremes of temperature.
☐ is carried out in or near water or other liquid that involves a risk of drowning.	☐ involves diving work.

ANY HIGH-RISK MACHINERY OR EQUIPMENT NEARBY							
☐ Forklift	☐ Crane/s	☐ Hoist/s	☐ Excavator	☐ Backhoe/Loader	☐ Boom Lift	☐ EWP	☐ Genie Lift
☐ Trencher	☐ Drilling Rig	☐ Trucks	☐ Formwork	☐ Bobcat	☐ Flammable Gas	☐ Fuel	☐ Dozer
☐ High Voltage	☐ Mulcher	☐ Tilt-up Panels	☐ Roller	☐ Scissor Lift	☐ Tractor	☐ Other -

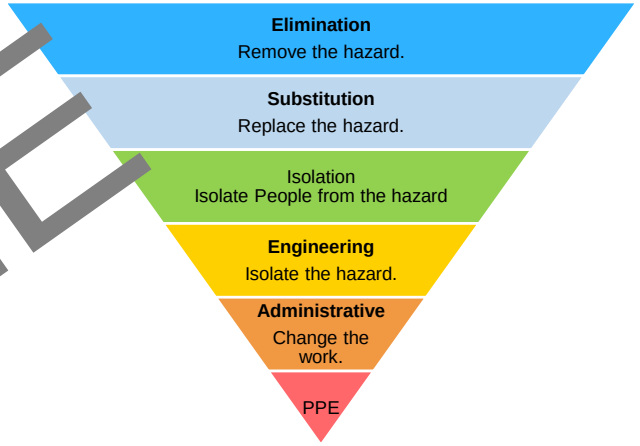
HEIRARCHY OF CONTROLS



Notes on Hierarchy of Controls: Elimination methods are the most effective and preferre en co lli d hazard. Substitution is the second most effective method of controlling a hazard. Engineering by isolation is the ost ef ve, while Administrative Controls by changing the work is the fourth most effective method. PPE (Personal Protective Eq ment) he least effective method.

PERS NAL TECTIVE EQUIPMENT (PPE)

FOOT PROTECTION	HAND PROTECTION	HEAD PROTECTION	HEARING PROTECTION	E PROTE	SPIRATORY PROTECTION	FACE PROTECTION	HIGH-VIS CLOTHING	PROTECTIVE CLOTHING	FALL PROTECTION	SUN PROTECTION	HAIR/JEWELLERY SECURED
											
☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐	☐

Select the appropriate PPE above suitable for the equipment used or the job task being performed (if applicable).

Note: A SWMS must be reviewed regularly to make sure it remains effective. A SWMS must be reviewed (and revised if necessary) if relevant control measures are revised. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When a SWMS has been revised, the person conducting a business or undertaking must ensure all:

1. persons involved in the work are advised that a revision has been made and how they can access the revised SWMS;
2. persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS; and,
3. workers that will be involved in the work are provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
1. Preparation	Poor hydration, Inadequate sun protection	2M	- Provide workers with a clear and concise briefing on working in hot conditions, including proper hydration, sun protection measures, and heat-related illness recognition. - Encourage workers to maintain adequate hydration levels by providing access to cool drinking water at all times on the job site. - Ensure that there are shaded areas or resting stations available for workers to take breaks and cool down when needed. - Require workers to wear broad-spectrum sunscreen (SPF 30 or higher) and reapply regularly throughout the workday. - Implement a rotating schedule, ensuring workers have ample opportunities to rest and recover in cooler environments, preventing overexposure. - Equip workers with appropriate protective clothing and gear such as wide-brim hats, sunglasses, and loose-fitting long sleeves to reduce direct sun exposure. - Monitor weather forecasts and adjust work schedules accordingly to avoid intense sun and heat periods, if possible. - Provide training to workers on recognizing early signs of heat stress and how to address it promptly and appropriately. - Implement a buddy system where workers can monitor each other's well-being and encourage regular water breaks together. - Encourage and facilitate the consumption of nutritious snacks or meals during breaks to replenish energy levels and maintain overall health. - Incorporate longer break times into the work schedule during especially hot periods to provide ample opportunities for workers to recover from heat exposure. - Develop and enforce a comprehensive heat management policy outlining guidelines for safe work practices in hot environments. - Conduct regular check-ins with workers to assess their well-being and ensure they're following proper safety procedures. - Review the effectiveness of existing control measures periodically, taking feedback from workers to improve safety protocols and ensuring ongoing compliance with Workplace Health and Safety regulations.	1L	
2. Material Handling	Manual handling injuries, Heat-related illnesses	3H	- Implement a comprehensive training programme for workers focusing on proper manual handling techniques and posture to minimise the risk of injuries. - Schedule work tasks during cooler parts of the day, if possible, to reduce the exposure to extreme heat conditions. - Encourage frequent short breaks for workers in shaded or cooler areas to prevent them from overheating.	2M	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Provide appropriate personal protective equipment (PPE) like gloves, safety footwear, and lifting belts to support safe material handling. - Incorporate assistive devices such as hand trucks, trolleys, or forklifts for lifting heavy loads to minimise manual handling risks. - Ensure all materials are well-organised and stored in easily accessible locations to avoid workers twisting, bending, or stretching excessively while retrieving items. - Maintain proper hydration by providing ample access to cold drinking water for all workers throughout their shift. - Monitor temperature, humidity and wind speed at regular intervals and take actions as required based on the appropriate guidelines to maintain worker's safety in hot conditions. - Utilise the buddy system, where workers are encouraged to look out for signs of discomfort or heat-related illnesses in their colleagues and seek prompt medical assistance when required. - Establish clear communication protocols between workers and supervisors for reporting hazardous conditions and incidents related to material handling or heat exposure. - Encourage workers to wear light-colored, loose-fitting clothing made of breathable fabric to help cool and limit heat stress. - Perform regular risk assessments of the work environment and update the Safe Work Method Statements (SWMS) as required to ensure continued effectiveness of control measures. - Encourage workers to acclimatize gradually to the hot working environment by progressively increasing their workload and allotted exposure time in hot conditions. - Provide first aid kits and trained personnel on-site to address any heat-related illnesses or injuries that may occur, enabling swift action and minimising potential complications.		
3. Site Inspection	Uneven terrain, Exposure to sun/heat	2M	- Regularly inspect the worksite for any uneven terrain, tripping hazards, and areas of excessive exposure to sun/heat before starting work activities. - Clearly identify and mark any hazardous areas, such as uneven ground, holes, or steep slopes, with safety signage, cones, or barriers to raise awareness and prevent accidents. - Display signage and information about heat-related risks, symptoms, and safety measures in prominent locations throughout the worksite. - Provide a shaded area for breaks and rest periods to minimise exposure to direct sunlight during peak heat hours. - Establish a schedule for regular work breaks to allow workers to cool down, hydrate, and recover from heat stress.	1L	

JOB STEP	POTENTIAL HAZARDS	IR	CONTROL MEASURES	RR	RESPONSIBLE PERSON
SPECIFIC WORK STEPS	HAZARDS THAT MAY ARISE	INITIAL RISK	SPECIFIC MEASURES TO BE PUT IN PLACE TO ELIMINATE OR CONTROL THE RISKS	RESIDUAL RISK	NAME OF PERSON
			- Encourage workers to wear wide-brimmed hats, sunglasses, and UV-protective clothing to protect their faces and skin from sunburns and other adverse effects of prolonged sun exposure. - Train workers on how to identify symptoms of heat stress and heat stroke, and provide clear guidelines on emergency response procedures in case of heat-related illnesses. - Make clean drinking water readily available at the worksite, and encourage workers to frequently hydrate to avoid dehydration and heat exhaustion. - Utilise portable fans and evaporative cooling systems where feasible to improve air circulation and reduce ambient temperatures in high-heat areas. - Rotate workers between tasks that expose them to direct sunlight and those in shaded or cooler areas to reduce cumulative exposure to heat and sun. - Encourage the use of sunscreen with a high SPF rating, and remind workers to reapply regularly according to the manufacturer's guidelines. - Monitor weather conditions daily for heat warnings and adjust work schedules, if necessary, to perform outdoor tasks during cooler portions of the day. - Provide personal protective equipment (PPE), such as non-slip footwear and gloves, to help workers navigate uneven terrain more safely and efficiently. - Foster an open communication environment that encourages workers to report any conditions or symptoms they feel may be related to heat exposure, and ensure supervisors respond appropriately to address these concerns in a timely manner.

EMERGENCY RESPONSE – CALL 000 FOR EMERGENCIES

Ensure to have an Emergency Management Plan in place as well as adequate numbers of trained first aid staff with easy access to fully stocked first aid kits, rescue equipment, material safety data sheets, adequate access to emergency communication equipment and fire-fighting equipment suitable for all classes of fire and ignition sources.

SIGNATORIES OF THE SAFE WORK METHOD STATEMENT

The signed and dated personnel listed below have cooperated in the consultation and development of this Safe Work Method Statement which has been approved by the Person/s Conducting a Business or Undertaking (PCBU). In signing this Safe Work Method Statement each individual acknowledges and confirms that they have read this SWMS in full, having raised any questions for items on this Safe Work Method Statement that require clarification, and confirms that they are competent, skilled and knowledgeable for the task assigned to them. Every person acknowledges that they have received the relevant training and qualifications where required, before carrying out any work contained in this Safe Work Method Statement. By signing this Safe Work Method Statement each individual agrees to work safely, to follow any safe work instructions which are provided, and agrees to use all Personal Protective Equipment where appropriate.

SAFE WORK METHOD STATEMENT MONITORING AND REVIEW

The SWMS must be reviewed regularly to make sure it remains effective and must be reviewed (and revised if necessary) if relevant control measures are changed. The review process should be carried out in consultation with workers (including contractors and subcontractors) who may be affected by the operation of the SWMS and their health and safety representatives who represented that work group at the workplace.

When the SWMS has been revised the PCBU must ensure that all persons involved with the work are advised that a revision has been made and how they can access the revised SWMS, including all persons who will need to change a work procedure or system as a result of the review are advised of the changes in a way that will enable them to implement their duties consistently with the revised SWMS. All workers that will be involved in the work must be provided with the relevant information and instruction that will assist them to understand and implement the revised SWMS.

The SWMS must be monitored regularly for the effectiveness of ensuring hazard controls are effective in reducing the risk of incidents, keeping the workplace safe for all personnel. The person responsible for monitoring the effectiveness of the Safe Work Method Statement should employ a multi-faceted approach which includes but is not limited to:

1. Spot Checks.
2. Consultation with workers, contractors and sub-contractors.
3. Internal audits on a continual basis.

An approach of continuous improvement, promptly recording inconsistencies or deficiencies, followed up by immediate corrective action and consultation with all relevant personnel ensures that the PCBU is consistently developing ever-improving systems of safe work principles.

SAFE WORK METHOD STATEMENT REVIEW CHECKLIST

This Safe Work Method Statement Review Checklist is to be followed and used upon initial development of the SWMS to help ensure that all steps have been adequately taken before work commences. Think of this document as an internal audit review checklist before commencing work, and may form part of a Toolbox Talk (safety meeting) and may be used as an opportunity for education and training.

ITEMS WHICH MUST BE INCLUDED IN THE SWMS	COMPLETED	TO BE DONE	COMMENTS
The company details have been entered, including the project name and address.	☐	☐	
Names and signatures of all relevant personnel consulted during the development of the SWMS.	☐	☐	
Name, signature, position and date signed of the person approving the SWMS.	☐	☐	
Specific personnel and qualifications, experience is noted in the SWMS.	☐	☐	
Provides a step-by-step process of tasks required to carry out the activity or task.	☐	☐	
Adequate risk assessment of any identified hazards has been completed.	☐	☐	
Foreseeable hazards are identified and documented for each step.	☐	☐	
Any hazards listed in any site risk assessments have been added to the SWM	☐	☐	
SWMS initial risk (IR) column as well as residual risk (RR) columns completed.	☐	☐	
Check control measures added to the SWMS are the most effecti se tions.	☐	☐	
Responsible person is assigned and listed on the SWMS for the im ementa of cont measures.	☐	☐	
Permit requirements specified, such as Hot Wor Electrical Work, W at Heights etc.	☐	☐	
SWMS identifies plant and equipment to be us d.	☐	☐	
Details of inspection checks required for any equipment listed ar noted on the SWMS.	☐	☐	
Describes any mandatory qualifications, experience, training skills required to perform the work.	☐	☐	
Applicable personal protective equipment is selected on the SWMS.	☐	☐	
Lists any required permits or licenses.	☐	☐	
Reflects and documents any legislative references and/or Australian Standards.	☐	☐	
Identifies any hazardous substances used with specific control measures in line with any SDS.	☐	☐
